ZEBRA TECHNOLOGIES AND HPE: PROTECTING FRONTLINE CAREGIVERS

Caregiver in distress. Help is on the way.

Caring for others should never come at the cost of personal safety. Zebra integrates duress alerting into the badges and mobile computers healthcare teams rely on every day. HPE's network connectivity and location services prioritize alerts the moment they are triggered, so they reach security and the nearest response team without competing for a connection. There's no call to make and nothing to explain.

NOT THE EXCEPTION

86% of nurses associations report violence or hostility against nurses from patients or the public[1]

WORKFORCE AT RISK

25% of nurses have considered leaving the profession because of workplace violence[2]

WHAT PROTECTION LOOKS LIKE

It's the small things: an alert that's never delayed, a location that's never in question, help that's never far away. Those are the moments a caregiver can count on.

Zebra makes the call for help simple. HPE keeps the path to response connected.

ZEBRA TECHNOLOGIES IN THE CAREGIVER'S HANDS

Instant activation
A press of a button, or a quiet spoken phrase, sends the alert without ever stepping away from the patient.

Rugged by design
Zebra devices keep working through drops, grabs, and the physical reality of a duress situation.

Coverage that travels
A wearable badge or handset means the same protection in the parking garage, the stairwell, or on a home visit—not just within four walls.

Visual context
That same alert can trigger a video call to security, so the response team sees the situation firsthand and knows exactly the best route to take.

HPE THE NETWORK BEHIND EVERY ALERT

Precise positioning
Access points triangulate where an alert originates, giving responders a place to head, not a floor to search.

Prioritized alerting
Duress alerts can be classified as critical traffic and delivered ahead of routine activity—a visitor streaming video, a routine device syncing.

No relay, no delay
Security and the nearest clinical team can be notified simultaneously, with shared location and alert context.

Integrated by design
Connects with nurse-call platforms and other clinical systems, enabling duress events and location context to be incorporated into existing workflows and records.

Better together: Safeguarding the people healthcare depends on every day.
