

1 Zippy embarks on her new destination

Zippy leaves the Zebra Technologies facility in Chicago, bound for your residence.

2 Zippy lands in your region

Zippy heads to a warehouse where a receiving dock employee "checks her in" using a Zebra DS3600 rugged scanner. With a quick barcode read, the employee can let others know she has arrived and where to find her when it's time for her to continue on her journey. (She'll be in the Batch 10 storage location.)

3 Zippy stops to rest

Zippy, along with the other books in her box, are picked up by a forklift operator and taken to temporary storage. The operator uses the Zebra L10 rugged tablet to navigate directly to the Batch 10 location.

4 Someone comes to retrieve Zippy when it's time to go

Zippy spends 24 hours in storage until a kind warehouse worker uses a Zebra MC3300 RFID mobile computer to locate her among all the boxes. (It's hard to get lost when you're wearing an RFID tag.)

5 Zippy finalizes her itinerary and confirms her identity

Zippy receives a unique barcode label to ensure she gets to the right home safely. The label is printed with a ZD420 or ZD460 desk printer using Zebra Certified Supplies. After being assigned a unique identifier, Zippy returns to her box to prepare for the next leg of her trip.

6 It's time to go!

Zippy is ready to depart the warehouse and head off to her final destination: your home! Once again, a warehouse employee uses an MC9300 to locate Zippy, confirm her "travel" plans and take her to the correct truck. Once she's loaded in and on her way to your post office, her departure is recorded via one last update on the rugged mobile computer. (Warehouse technology is so helpful!)

7 Zippy gets dressed up

A woman receives Zippy at the post office and uses a rugged mobile computer, the TC56, to scan her label and confirm she's in the right place. This also helps her route Zippy to the driver who will take her to your house. But the postal worker discovers Zippy is a gift and should be wrapped, so she packages her nicely for you before she lets her go.

8 Zippy is just around the corner...get ready!

Zippy is picked up by the mailman and gently loaded into his vehicle. He uses the Zebra TC26 rugged mobile computer to scan her label and verify her identity. He immediately knows Zippy's destination and the best route to get her there. A short while later, he helps Zippy out of his vehicle and walks her to your doorstep. He scans her box a final time with his TC26 and records her delivery. Welcome to your new home, Zippy!
