Known Issues and Limitations

1. WiFi sleep policy set to "Always" (Android O limitation)
2. When non-GMS device is in lockdown mode and the settings manager app is enabled, available Wi-Fi networks are "unavailable". This feature is working on GMS devices.
3. Issue will occur when device is in GMS Restricted and Enterprise Reset is initiated without setting the SUW flag (example: user manually initiates ER).
4. In Do mode is CSP features are allowed to work, then the ZebraBluetooth app needs to be white listed by default. If not white listed listed all the Bluetooth CSP features will be affected and will not work as expected.
5. if ZebraBluetooth is white listed by default and if any of the Bluetooth CSP feature is configured, and when the ZebraBluetooth app is removed from white list again, then unless the app is white listed again the CSP features can not be configured/changed.

For further information on the product features, please refer to the product reference guide shared under the "Manuals" section on PS20 page.
