

# Zebra IDP 1.2

## Release Notes – April 2024

### Highlights

- Reset Password flag support.
- User Import optimization
- Allow Multiple Talk Groups

### Device Support

As per PTT Pro Android Application

### New in Zebra IDP 1.2

#### **Reset Password flag support.**

Customers will now be able to include the reset password flag in the user CSV file. If enabled, this would reset the password for that user.

#### **User Import optimization.**

During user import, if the user is not added to the IDP for e.g because of password policy violation user will not be added to the PTTPro Server.

#### **Allow Multiple Talk Groups.**

During user import, one can add one or many PTT talk groups to the user by separating them with semicolon. Customer must create PTT talk group in PTT Pro server before the user import

### Zebra IDP Components

- Service that will ingest data into the IDP and PTTPRO through dropping a CSV into an SFTP service.
- Identity provider service that houses user information which can be used to login to systems via Oauth standards or saml standards.

### Resolved Issues

None

### Known Issues

None

### Usage Notes

## Documentation

The following documentation is available for Zebra IDP:

- Identity Provider Workforce Connect Quick Start Guide

## About Zebra IDP

WFC is offering an identity provider (IdP). This is a system that provides an end user with a single set of login credentials that ensures the entity is who it says it is across multiple platforms, applications and networks. As part of this system we are also including it as an availability to pull that data into other WFC components such as PTTPRO.

## Release History

### Release 1.1

- Single Sign-on based customer data ingestion.
- Identity provider house customer user information
- Systematic way of adding it directly into PTTPRO server.
  - This helps so there is not double keying of information.
