

# Release Notes – PSS Cart Calibration Application

version: 2.0

Date: 19-Dec-2018

## Introduction

---

PSS Calibration App allows users to calibrate the PS20 device for a shopping cart orientation. This app should be used only by device installation personnel once during the deployment phase at a specific store location or where the same cart orientation will be used. The app generates a calibration file, which provides an angle orientation setting for when the device is placed in a shopping cart holder or wheeled cart. The calibration file can then be extracted and deployed to other devices in the same store location or using the same cart orientation. The calibration data file contains information used by each device, such as a cart angle setting, (with an expected cart angle tolerance of 5%) to know that it is seated in a cart holder.

This document captures only the version specific details of the PSS Cart Calibration application. Please refer to the “Device Compatibility” section for the Operation systems that this application version is compatible with.

For further information on the usage of the application, please refer to the PSS Calibration App user guide.

## Version History

---

Version: 2.0

### Change notes

- First version released
- Supports the generation of the calibration file as per the cart orientation where PS20 terminal is placed.

## Installation Instructions and Requirements

---

Please refer to the PRG : <https://www.zebra.com/us/en/support-downloads/mobile-computers/handheld/ps20.html>

## Device Compatibility

---

This software release has been approved for use on the following devices.

<b>Device Part Number</b>	<b>Operating System</b>
PS20J-P4G1A600	1.13.20 or higher
PS20J-P4G1NA00	1.13.20 or higher

## Known Issues and Limitations
