

I53.15.x and I50.13.x Summary of Firmware Changes

This document summarizes the following I53.15.x and I50.13.x firmware releases:

Firmware Release Number	Release Date	See Page
I53.15.0	14 January 2008	page 1
I50.13.3	01 November 2005	page 4

I53.15.0

Release Date: 14 January 2008

I50 has been changed to I53. This firmware release includes features of the previous I50.13.x releases. It is for use with the following 203 dpi printer models:

- All S4M (203 dpi) printers
- All ZM400/ZM600 (203 dpi) printers

Changes

Support added for:

- The Wireless Plus option board for the S4M, ZM400, and ZM600 printers.
- The Cisco™ CB21 802.11b/g card, when used with the Wireless Plus option board.
- New Wireless Securities (see [Table 1 on page 3](#) for the compatibility chart):
 - PEAP
 - EAP-TLS
 - EAP-TTLS
 - EAP-FAST
 - WPA PSK
 - WPA2 PSK
 - WPA PEAP
 - WPA LEAP
 - WPA EAP-TLS
 - WPA EAP-TTLS
 - WPA EAP-FAST
 - Kerberos
 - WPA2 PSK

- WPA2 PEAP
- WPA2 LEAP
- WPA2 EAP-TLS
- WPA2 EAP-TTLS
- WPA2 EAP-FAST
- Wireless Set/Get/Do commands, allowing for configuration of wireless settings using Set/Get/Do command strings*.
- The Wireless Plus option board firmware has been updated to version 2.1.1761.
- A network configuration label is now available for wireless plus print server on the S4M and ZM400/ZM600, and also for the internal wired print servers on the ZM400/ZM600.
- Eight simultaneous connections for printing via wireless (raw port).
- Updating the Wireless Plus option board when printer firmware is updated. Users will see a **DOWNLOADING FIRMWARE** message and status message for both the printer and Wireless Plus option board firmware downloads.
- A Wireless Pulse feature, which sends a LSAP packet at a regular interval, has been added*.
- The data LED flashes in response to the receipt of data, not to the receipt of each wireless packet.
- The maximum MTU for the Internal Wired Print servers on the ZM400/ZM600 has been set to 1460.
- S4M now reports its on-line status correctly via the USB port.
- The graphic display on the ZM400/ZM600 printers.
- The Internal Wired Print Server on the ZM400/ZM600 models.
- The User Selectable "Primary Print Server" which allows the user to configure the printer to determine which print server type - wired or wireless - to use as the Active Print Server at power up. Available on the ZM400/ZM600 and for use with the wired and wireless print servers.
- The ability to display the "Active Print Server" on the front panel and network configuration label

Note • IPP, HTTP, FTP, POP3 and SNMP are not supported on the Wireless/Wireless Plus option boards and ZM400/ZM600 Internal Wired Print Server. Raw printing to port 9100 is supported.

* See the latest APL-I manual (available at www.zebra.com) for details on new commands.

Issues Corrected and Items Changed

- Stored formats are retained after cycling power.
- Text centered in the middle of an inversed rectangle is now positioned correctly.
- Variable data will be assigned to the correct fields when some fields in the format are not populated with data.
- Characters in Code Page 850 now print correctly.

- Formats can be recalled and printed without a power cycle.
- The less than symbol (<) and subsequent text now print correctly.
- The top of form adjustment command now works correctly.
- Fields in a format named using the asterisk character now print correctly.
- When all parameters are not specified, user defined fonts now print.

Table 1 • Wireless Plus PrintServer Security Support

Securities Supported	Cisco CB21 (CardBus)	Cisco 350 (PCMCIA)	LA-4121 (PCMCIA)	LA-4137CF (Compact Flash)
Open	Yes	Yes	Yes	Yes
KERBEROS	Not Supported	Not Supported	Yes	Yes
WEP 40-bit & 128-bit	Yes	Yes	Yes	Yes
LEAP	Yes	Yes	Yes	Yes

WPA2 EAP- FAST	Yes	Not Supported	Not Supported	Not Supported
WPA2 EAP-TLS	Yes	Not Supported	Not Supported	Not Supported
WPA2 EAP-TTLS	Yes	Not Supported	Not Supported	Not Supported

Wireless Notes

The following items are issues Zebra has noted during testing with various wireless networking products:

- Conflicts can exist between the Symbol LA-4137CF and some Cisco Access Points. This is characterized by the RF card reaching the Maximum Retry timeout.
- Conflicts can exist between the 802.11B Symbol LA-4137CF and 802.11G support on some Access Points. One potential work-around is to disable G support on the Access Point.

- It is recommended to set WPA Handshaking to 1000ms on Cisco access points.
- It is recommended to disable the Aironet Extensions.
- It is recommended to use Cisco Access Point firmware 12.3(8)JAE1 or later.

I50.13.3

Release Date: 01 November 2005

This APL-I firmware release is for use with the following 203 dpi printer models:

- S4M

New Features

- Implementation enables supported printers to accept IPL code only. The printer will no longer respond to ZPL.
- Most functions of the Intermec 3400D[®] printers are fully supported, and available documentation specifies which commands are supported.
- This firmware is intended to allow a supported Zebra printer to function as a drop-in replacement for a Intermec 3400D printer. If formats printed with Zebra printers are not acceptable, contact apl@zebra.com for possible firmware enhancements.
- This version offers limited support for printing to Zebra Wired Print Servers. It does not support Wireless printing.
