Proprietary Statement

This manual contains proprietary information of Zebra Technologies Corporation and its subsidiaries (“Zebra Technologies”). It is intended solely for the information and use of parties operating and maintaining the equipment described herein. Such proprietary information may not be used, reproduced, or disclosed to any other parties for any other purpose without the express, written permission of Zebra Technologies.

Product Improvements

Continuous improvement of products is a policy of Zebra Technologies. All specifications and designs are subject to change without notice.

Liability Disclaimer

Zebra Technologies takes steps to ensure that its published Engineering specifications and manuals are correct; however, errors do occur. Zebra Technologies reserves the right to correct any such errors and disclaims liability resulting therefrom.

Limitation of Liability

In no event shall Zebra Technologies or anyone else involved in the creation, production, or delivery of the accompanying product (including hardware and software) be liable for any damages whatsoever (including, without limitation, consequential damages including loss of business profits, business interruption, or loss of business information) arising out of the use of, the results of use of, or inability to use such product, even if Zebra Technologies has been advised of the possibility of such damages. Some jurisdictions do not allow the exclusion or limitation of incidental or consequential damages, so the above limitation or exclusion may not apply to you.

Introduction

Zebra Technologies' Local License Manager (also referred to as "Server")

Sentinel RMS License Manager is an on-premises network service that enforces and manages licensing in multi-user environment. It keeps track of all the licenses and handles requests from network users who want to run your application, granting authorization to the requester to allow them to run the application, and denying requests when all licenses are in use.

This guide describes how to administer Zebra Technologies' Local License Server.

NOTE: Screens and windows pictured in this guide are samples and can differ from actual screens.

Contact

Please feel free to send your queries on this presentation to ZebraSWLicensingTeam@zebra.com

Getting Started

Local License Server Requirements

Hardware Requirements

Minimum hardware requirements for the license server:

- Hard drive: 500 MB
- RAM: 4 GB
- CPU: 2 GHz, two cores.

Supported Platforms

The Embedded local license server is supported on the following platforms:

- Windows (32-bit binary that is available for both 32-bit and 64-bit).

Default Installation Path

- Windows 32-bit - <Osdrive>:/Program Files/Common Files/Thales/Sentinel RMS License Manager/WinNT
Do not change default installation path.

Network Port

- 5093

 **NOTE** Sentinel RMS License Manager uses port number 5093 and 5099. Make sure these ports are not blocked by a firewall. Otherwise, it may result in unexpected behavior. These ports are used for license activation on Devices.

Customer License Portal

- <https://zebratechnologies.prod.sentinelcloud.com/ecp/>

Download Packages

If you require administration of enterprise licenses on a local, on-premise server, please contact the [Zebra Technical Support](#) help desk to obtain access to the installer.

Install Local License Manager(LLS)

All Installation steps must be executed using **Administrator Privilege**.

1. Install Sentinel RMS License Manager 10.2.0 executable (Sentinel RMS License Manager 10.2.0.msi) under RMS License Manager folder.
 - a. During installation steps, please select installation Type as Complete.
 - b. Select checkbox for unlock system firewall settings for RMS License Manager.
 - c. Follow installation prompt with default selections until Installation is completed.
2. **[MANDATORY] Execute “update-10.2.0.105-patch.bat” script with Administrator Privilege to patch the RMS License Manager with latest version 10.2.0.105.**

```
Administrator: Command Prompt

E:\LLSInstaller\patch_installer\patch_installer>update-10.2.0.105-patch.bat
[*] Checking for administrative privileges...
-----
Sentinel RMS Update Service
-----
[*] Checking file versions...
[CURRENT VERSION] 10.2.0.94
[NEW VERSION      ] 10.2.0.105
[PROCEED] Newer version detected. Starting update...
-----
[*] Checking service status...
[*] Stopping service: Sentinel RMS License Manager...
The Sentinel RMS License Manager service is stopping.
The Sentinel RMS License Manager service was stopped successfully.

[*] Backing up current file to old.lservnt.exe...
[*] Deploying version 10.2.0.105...
      1 file(s) copied.
[SUCCESS] File replaced.
[*] Starting service: Sentinel RMS License Manager...
The Sentinel RMS License Manager service is starting.
The Sentinel RMS License Manager service was started successfully.

-----
Update Complete: 10.2.0.94 -> 10.2.0.105
-----

E:\LLSInstaller\patch_installer\patch_installer>
```

Thales Local License Server Components

1. RMS License Manager (Local License Server) Service.
2. SentinelCloudPlugin - Sentinel Cloud Plug-in (SCP) Service.
3. WlmAdmin – Administration Application for RMS License Manager.
4. WlsGrMgr – Application to manage Reservations.

Zebra RMS WlmAdmin

WlmAdmin displays information about the on-premises RMS License Managers¹ and performs a variety of administrative functions associated with them. It displays elaborate information, which includes the License Manager information, feature information, and license and client information.

Start WlmAdmin

- Launch WlmAdmin – Administration Application (WlmAdmin.exe) from WLMAdmin directory.

Landing page of WlmAdmin

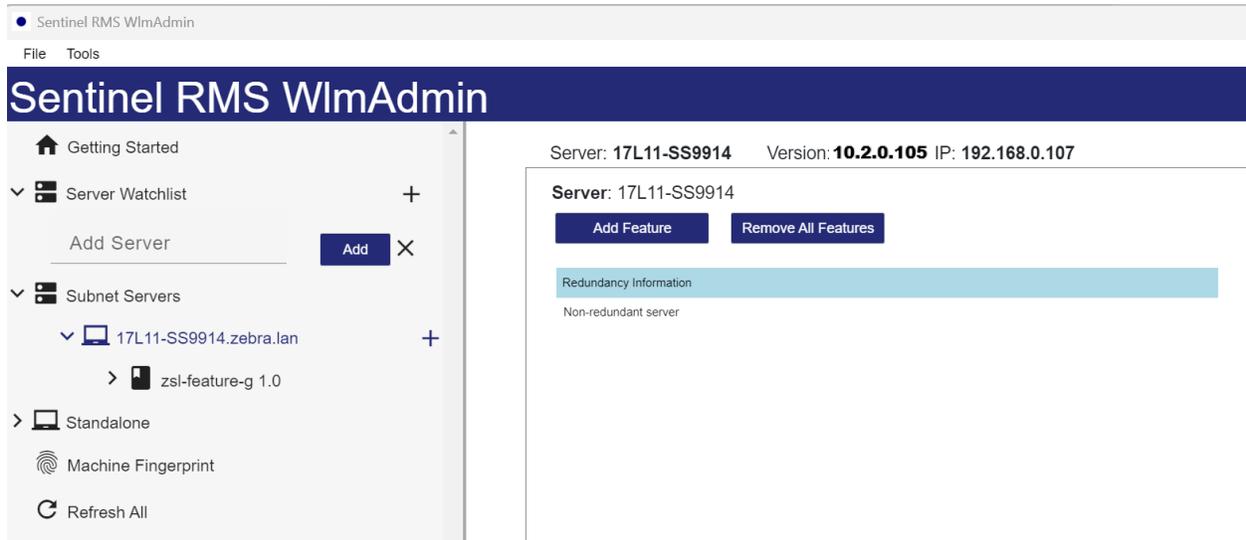

Server Watchlist

- Allows creation of a list of defined License Managers.
- Click the + icon shown next to Server Watchlist. The Add Server field appears. In the Add Server field, type the host name or IP address of the License Manager host name and click Add. Once a License Manager is added, all the features-version combinations for which the License Manager is hosting licenses, are listed.
- You can add more License Managers to view the licenses hosted by them.

- **NOTE** WlmAdmin may take time in showing an error message if you have clicked a License Manager (in the Server Watchlist) that is either not running or does not exist. WlmAdmin attempts to find the License Manager and shows an error message when it fails in doing so.

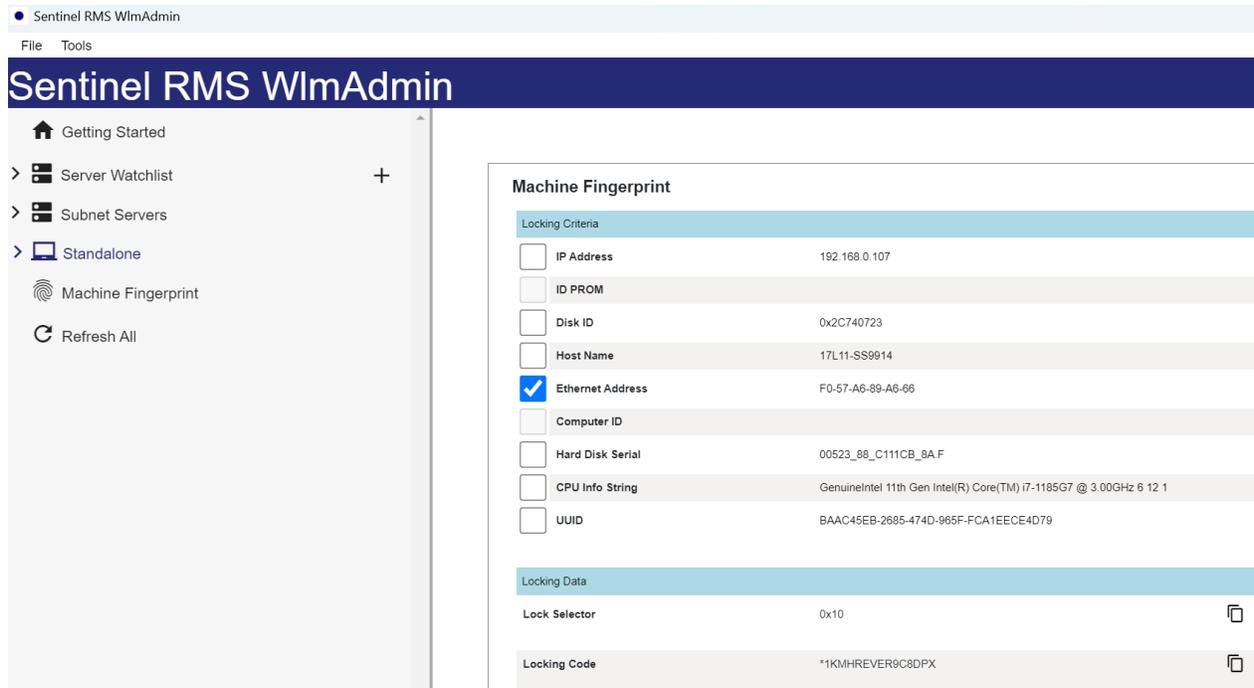

Subnet Servers

- Discovers the License Managers on your network subnet.
- If not sure of the License Manager computer's host name or IP address, please wait for WlmAdmin to display License Managers under Subnet Servers. WlmAdmin broadcasts to the network to discover all License Managers and display them here.
- Click the left-side arrow > to list any License Managers in the subnet.
- Click the + icon shown next to a subnet server to add the selected server to Server Watchlist.

Machine Fingerprint

- Displays the fingerprint information of the current machine.
- Select from the available fingerprint options to generate the [locking information](#) of the current machine.

NOTE: Local License Server supports Machine Fingerprint type Ethernet address only

Refresh All

- Displays new information on that group of License Managers.

Lock Code

Note: Lock code is needed to Activate License and Download License File from ECP Portal,

Customer License Portal

<https://zebratechnologies.prod.sentinelcloud.com/ecp/>

Method

- Run WlmAdmin.exe file
- Navigate to the Machine Fingerprint Section to obtain locking code.
- Uncheck all Locking Criteria and keep only Ethernet Address option checked.
- Locking Code is displayed under Locking Data -> Locking Code.

The screenshot shows the Sentinel RMS WlmAdmin application window. The title bar reads "Sentinel RMS WlmAdmin" and the menu bar includes "File" and "Tools". The main window has a dark blue header with the text "Sentinel RMS WlmAdmin". On the left, there is a navigation pane with the following items: "Getting Started", "Server Watchlist" (with a refresh icon), "Subnet Servers", "Standalone", "Machine Fingerprint" (highlighted with a blue bar), and "Refresh All" (with a refresh icon). The main content area is titled "Machine Fingerprint" and is divided into two sections: "Locking Criteria" and "Locking Data".

Locking Criteria	
<input type="checkbox"/> IP Address	192.168.0.104
<input type="checkbox"/> ID PROM	
<input type="checkbox"/> Disk ID	0xA2C9D444
<input type="checkbox"/> Host Name	MYTSL02004
<input checked="" type="checkbox"/> Ethernet Address	00-BE-43-22-03-37
<input type="checkbox"/> Computer ID	
<input type="checkbox"/> Hard Disk Serial	YCCA0N201870C034_G00000010
<input type="checkbox"/> CPU Info String	GenuineIntel 11th Gen Intel(R) Core(TM) i5-1145G7 @ 2.60GHz 6 12 1
<input type="checkbox"/> UUID	4C4C4544-004E-3910-804B-B1C04F444C33

Setup Local License Server in Online Mode. Network Online Variant License – Activate License.

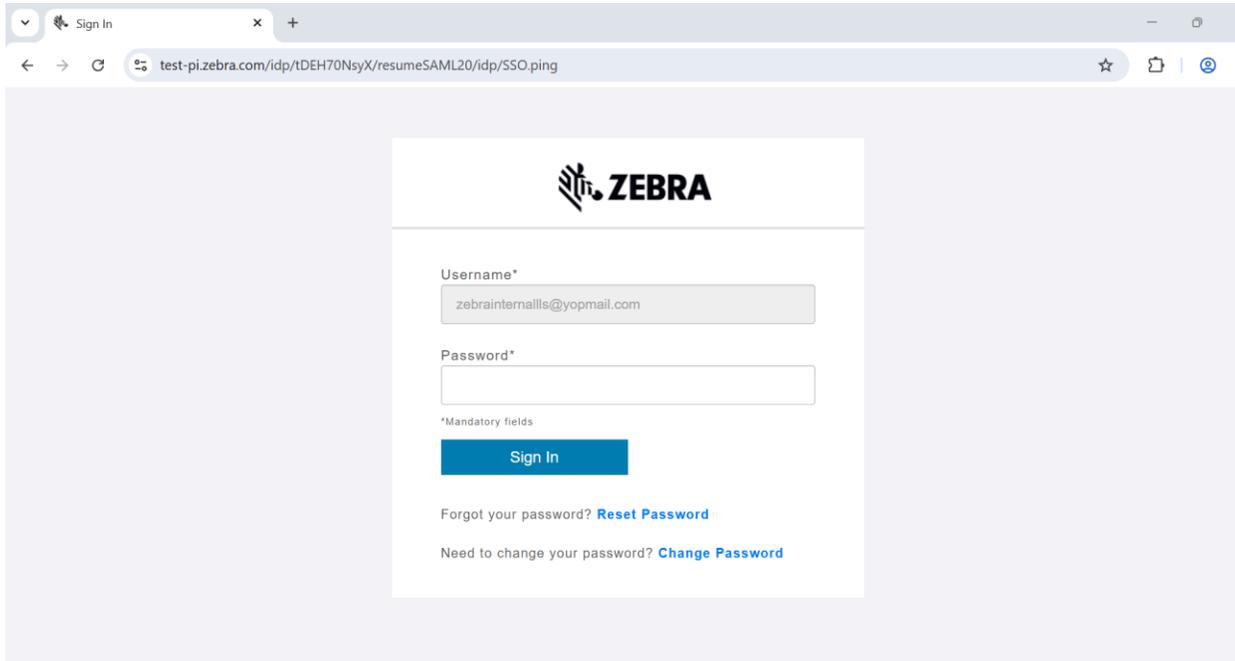

How to obtain Customer Id.

Step 1: Login into ecp portal <https://zebratechnologies.prod.sentinelcloud.com/ecp/>

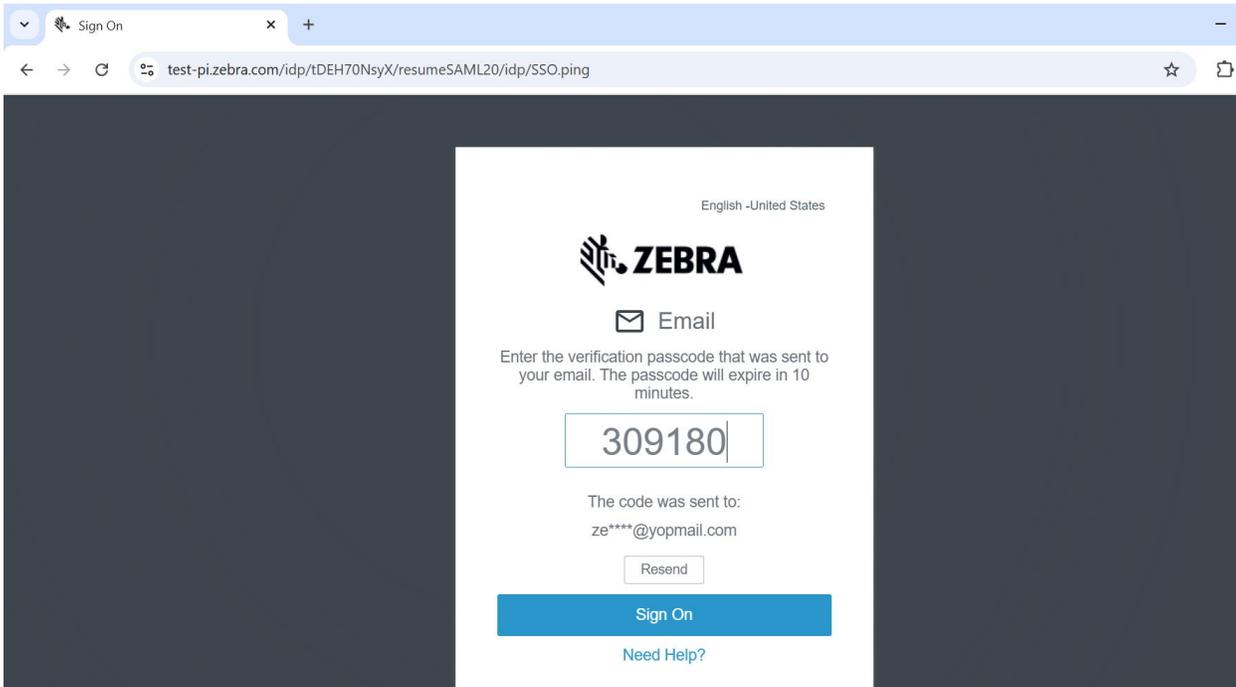

Step 2: Enter username

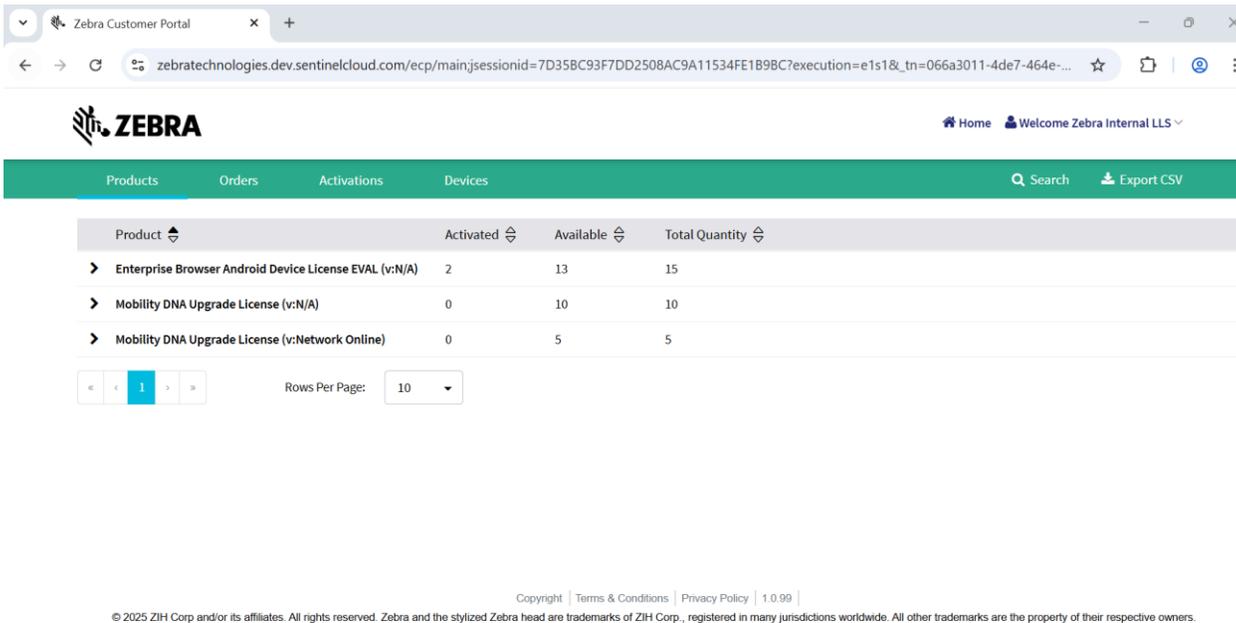

Step 3: Enter password

Step 4: Enter verification passcode and click on sign on

Step 5: Successfully logged into ECP portal.

Step 6: Navigate into Orders menu icon to view all the license details.

Command - **sntlcloudps_zebratechnologiescorporation.exe -stop**

Command - **sntlcloudps_zebratechnologiescorporation.exe -start**

Sentinel Cloud Plugin (SCP) Proxy Configuration Settings

Locate **sntlcloudp_configuration_zebratechnologiescorporation.xml** configuration file and modify the following elements:

ProxyMode: Proxy connection mode.

The possible values are:

1. Indicates that the proxy is disabled.

NOTE The licensed application will not connect to the cloud if the client machine is in a proxy environment and proxy settings for SCP are not defined.
2. Refers to the manual proxy mode. In this mode, you need to manually set the proxy settings.
3. Refers to the auto proxy mode. In this mode, the proxy settings are automatically detected.

Manual Proxy Settings (ProxyMode value="2")

ProxyHost: Proxy host name or IP address.

ProxyPort: Port at which the proxy is running.

Proxy Credentials (when authentication is enabled in the proxy server)

ProxyUser: User name for the proxy authentication.

ProxyPassword: Proxy password for the proxy authentication.

Auto Proxy Settings (ProxyMode value="3")

In this mode, the proxy settings are automatically detected. There are two automatic proxy detection methods:

- WPAD (Web Proxy Autodiscovery Protocol): The proxy detection can be done using either DNS or DHCP discovery methods.

NOTE DHCP has a higher priority than DNS. The WPAD-enabled client first uses DHCP to find a proxy server, and if the desired information is not obtained, DNS is used. If the wpad.dat file is not found or if a proxy is not detected while running wpad.dat, no error is returned. Instead, the client tries to connect in a manner similar to when the proxy is disabled (No Proxy).
- PAC (Proxy Auto-configuration): The location of the proxy script file is specified in the configuration file. In the auto proxy mode, WPAD takes precedence over PAC.
- **ProxyPAC:** Location of the auto-proxy configuration (.pac) file to be used for the proxy detection. Use this option for auto-proxy with the .pac file support. This option takes the URL or path of the .pac file as input.

Setup Local License Server in Offline Mode.

Offline Variant License - Activate & Download License File

Login to ECP Portal activate the license and download license file.

1. Go to ECP Portal, <https://zebratechnologies.prod.sentinelcloud.com/ecp/>
2. Go to Products-> Select product -> click Activate

Add License files to the Local License Server using WlmAdmin

Run WlmAdmin.exe file

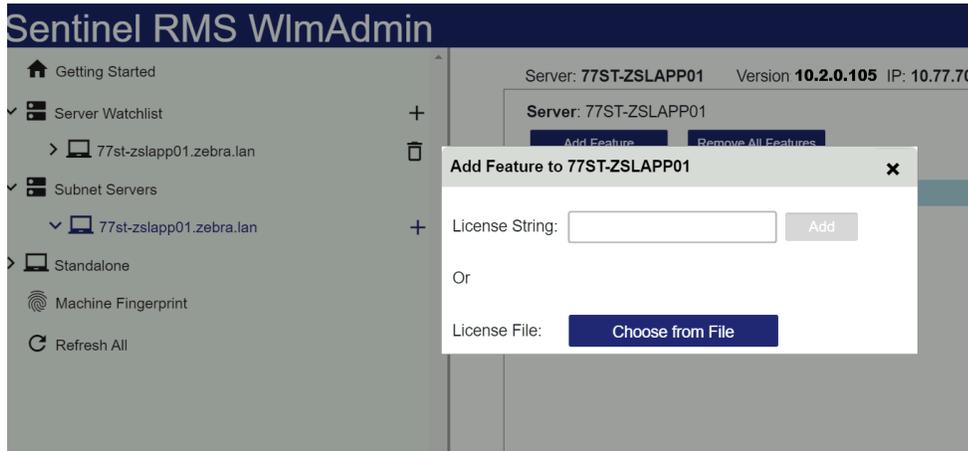

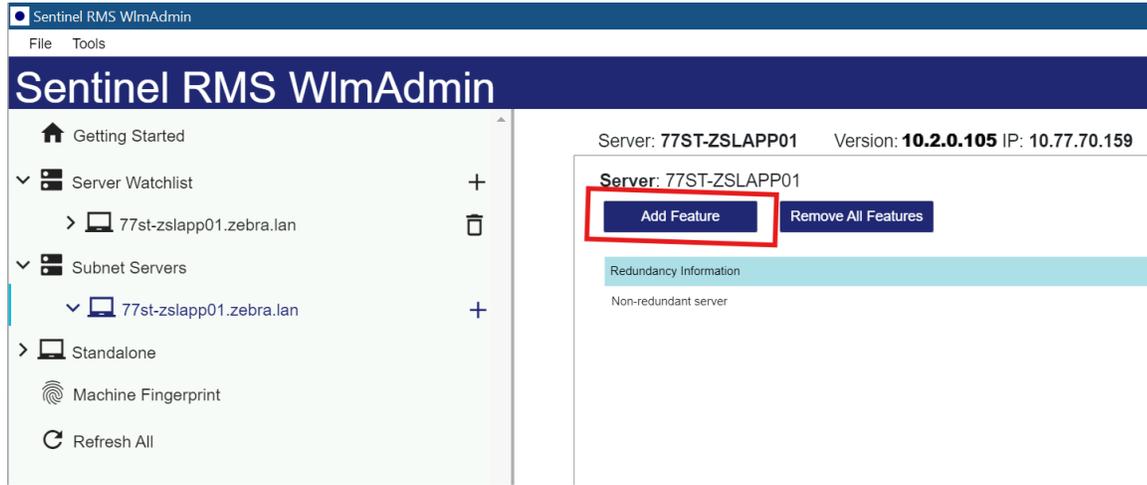

Subnet Servers

Click on Subnet Servers menu option, and click on server

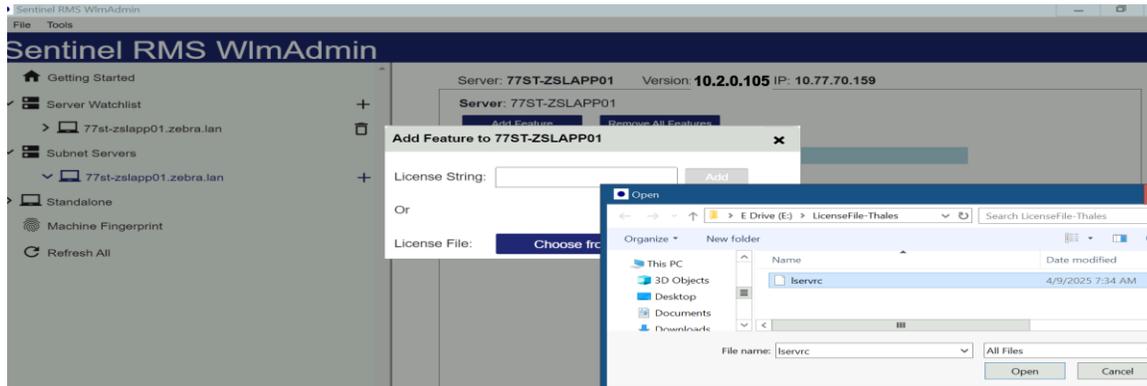

Add Feature

Click on Add Feature

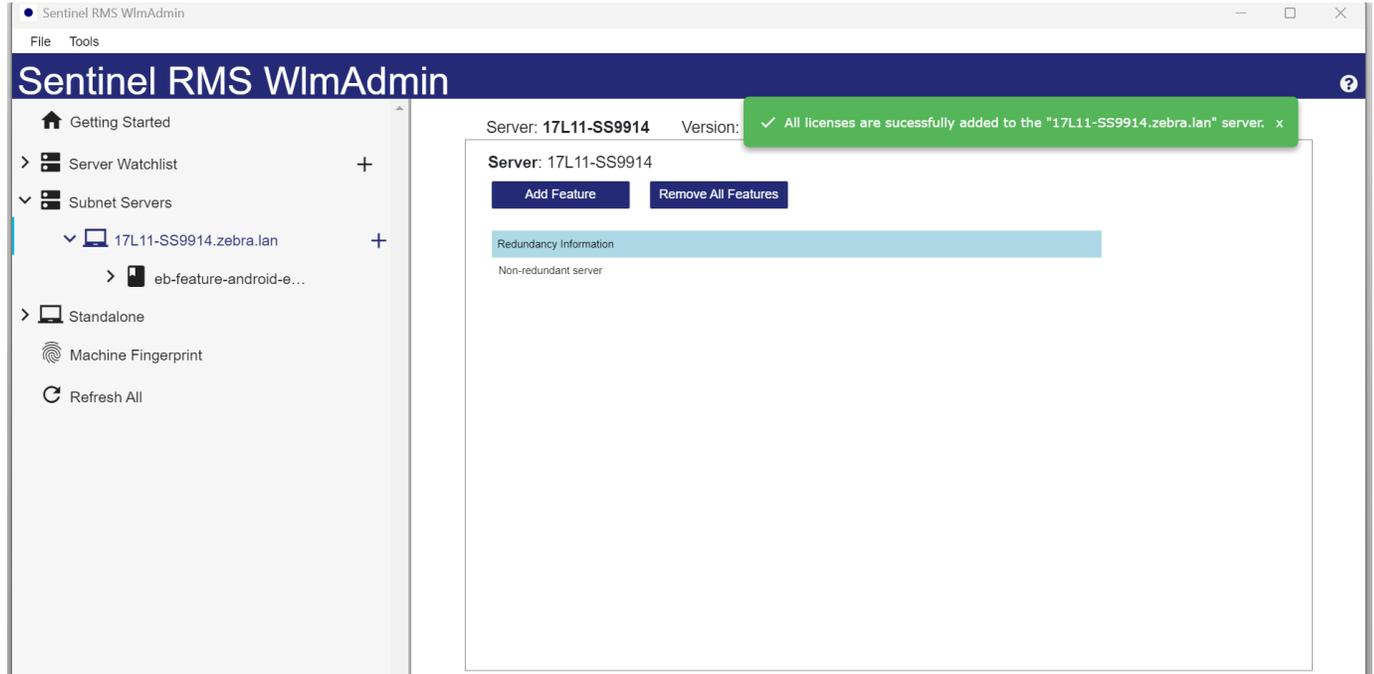

Add License File

Click Choose from file and select downloaded license file from Customer portal with name – “Iserverc”.

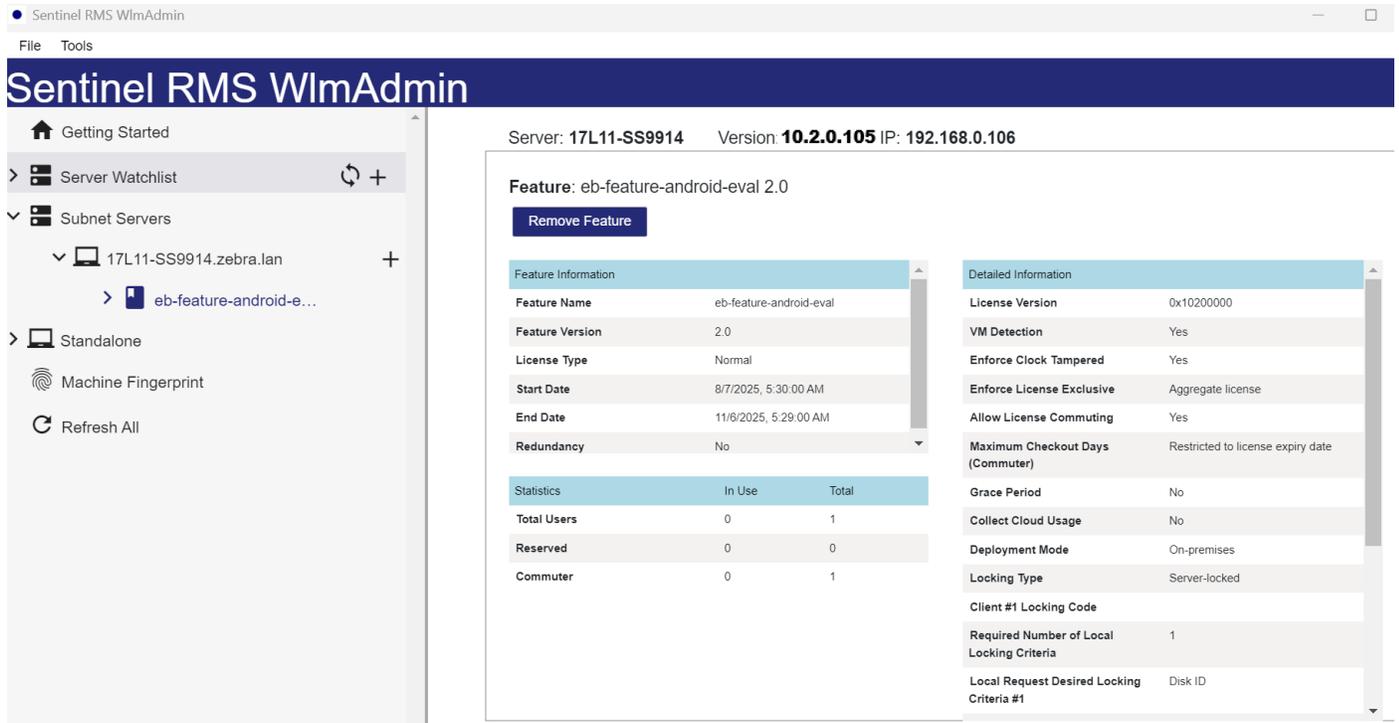

License File Added

Success message notification is displayed.

License Details

To review license details go to subnet servers and select the server, and click on the feature.

Add-On Orders for Additional Licenses or Renewals.

NOTE WImAdmin can have only one license key for a particular Product/Feature. Please make sure to consolidate your purchases into a single license key for using it in Local License Server. If you are using subscription licenses, make sure to co-terminate all your contracts so that the licenses purchased can be consolidated into a single license key.

Add-on Orders licenses can be added to existing Local License Server with the help of Zebra Team.

Steps to follow after Add-On Order Processing is completed.

- Go to ECP Portal, <https://zebratechnologies.prod.sentinelcloud.com/ecp/>
- Locate the Consolidated License Key (PKID) and Download the License File (Iservrc).
- Apply the new license file to the Local License Server using WImAdmin Application.

NOTE WImAdmin retains old license record entries:

- The old license record (e.g. Lic0, Lic1, etc.) status changes to inactive.
- The new license record is shown with active status and updated expiration date or quantity.
- Current Devices licensed using Local License Server needs to be initiate License Refresh.

Frequently Asked Questions

Q: How do I get access to the Zebra's Licensing Portal?

A: Follow the Instructions in the system generated mail upon successful creation of the entitlements.

Q: How do I get my licenses consolidated?

A: Reach out to Zebra Software Licensing Team ZebraSWLicensingTeam@zebra.com for License Consolidation.

Q: How do I get my contracts co-terminated?

A: Reach out to Zebra ZaaS Team ZaaS@zebra.com for contracts co-termination.
