

ENTERPRISEKEYBOARD V1.2 RELEASE NOTES

INTRODUCTION

Thank you for selecting Symbol Technologies LLC as your mobility solution tool provider. Enterprise Keyboard is designed to provide the most productive means possible of inputting data into Zebra devices. Building on the stock Android keyboard, Enterprise Keyboard adds programmable keys, switches quickly between languages and key layouts, and has the ability to scan data directly into an application.

Enterprise Keyboard also makes use of Android's Personal dictionary for spelling suggestions and corrections, permitting customers and partners to populate the device with industry-specific terms to help improve the speed and accuracy of keyboard input. A Personal dictionary can be populated and mass-deployed through Zebra's Mobility Extensions (MX).

For Enterprise Keyboard documentation and discussions, please visit the Launchpad Web site at: <http://zebra-stage.github.io/enterprise-keyboard/1-0/guide/about/>

Version 1.0

Added support for Enterprise Keyboard on Zebra device. The features supported in this version are:

- Switch keyboard layouts with taps or swipes.
- Scan directly with the Barcode tab to collect data where and when it's needed.
- Input long-press characters with a finger-flick.
- The Globe key quickly pages through selected languages.
- Remappable keys easily enable custom key layouts.
- A specially designed color scheme permits easy viewing indoors and out.
- Supports use of Android's Personal dictionary for spelling suggestions, corrections, etc.

COMPONENTS OF ENTERPRISE KEYBOARD

COMPONENT NAME	LOCATION OF THE ZIP
EnterpriseKeyboard_OSUpdatePackage_v1.2.0.2.zip	Support Central

DEVICE SETUP

Enterprise Keyboard Device Runtime Installation

Manually installing the Enterprise Keyboard OS update

- Connect the Symbol Android device to the PC.
- Copy EnterpriseKeyboard_OsUpdatePackage_v1.2.0.2.zip to SDCard on device.
- Reboot the device in the recovery mode.
- Follow the instructions to select apply update from SDCard.
- Select EnterpriseKeyboard_OSUpdatePackage.zip.
- Wait for the device to complete the installation.
- Reboot the device.

- This completes Enterprise Keyboard device runtime installation.

KNOWN ISSUES

- Autocapitalization doesn't work if you navigate away from the alpha keyboard prior to typing.
- Keyboard popups disappear entirely if you swipe to symbols and back to alpha.
- The current keyboard layout (non QWERTY) does not persist when moving from portrait to landscape (or vice versa). The keyboard always returns to the QWERTY layout after a screen rotation event.
