Z Series®/RZ™ Series
Industrial/Commercial Printer

User Guide

ZM400, ZM600, RZ400, and RZ600 printers
We have determined that the Zebra printers identified as the

Z Series® and RZ™ Series
Z4M, Z6M, Z4Mplus, Z6Mplus, ZM400, ZM600, R4Mplus, RZ400, RZ600

manufactured by:

Zebra Technologies Corporation
475 Half Day Road, Suite 500
Lincolnshire, IL 60069 USA

Have been shown to comply with the applicable technical standards of the FCC

For Home, Office, Commercial, and Industrial use

If no unauthorized change is made in the equipment,
and if the equipment is properly maintained and operated.
Compliance Information

FCC Compliance Statement

This device complies with Part 15 rules. Operation is subject to the following two conditions:

1. This device may not cause harmful interference, and
2. This device must accept any interference received, including interference that may cause undesired operation.

The user is cautioned that any changes or modifications not expressly approved by Zebra Technologies Corporation could void the user’s authority to operate the equipment. To ensure compliance, this printer must be used with Shielded Communication Cables.

FCC Radiation Exposure Statement
(for printers with radios or RFID encoders)

This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with minimum distance 20 cm between the radiator and your body.

This transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.

Canadian DOC Compliance Statement

This Class B digital apparatus complies with Canadian ICES-003.

Cet appareil numérique de la classe B est conforme à la norme NMB-003 du Canada.

Document Conventions

The following conventions are used throughout this document to convey certain information.

**Alternate Color** *(online only)* Cross-references contain hot links to other sections in this guide. If you are viewing this guide online in .pdf format, you can click the cross-reference *(blue text)* to jump directly to its location.

**LCD Display Examples** Text from a printer’s Liquid Crystal Display (LCD) appears in Bubbledot ICG font.

**Command Line Examples** Command line examples appear in Courier New font. For example, type ZTools to get to the Post-Install scripts in the bin directory.

**Files and Directories** File names and directories appear in Courier New font. For example, the Zebra<version number>.tar file and the /root directory.

**Icons Used**

- **Caution** • Warns you of the potential for electrostatic discharge.

- **Caution** • Warns you of a potential electric shock situation.

- **Caution** • Warns you of a situation where excessive heat could cause a burn.

- **Caution** • Advises you that failure to take or avoid a specific action could result in physical harm to you.

- **Caution** • *(No icon)* Advises you that failure to take or avoid a specific action could result in physical harm to the hardware.

- **Important** • Advises you of information that is essential to complete a task.

- **Note** • Indicates neutral or positive information that emphasizes or supplements important points of the main text.

- **Example** • Provides an example, often a scenario, to better clarify a section of text.
Illustration Callouts  Callouts are used when an illustration contains information that needs to be labeled and described. A table that contains the labels and descriptions follows the graphic. Figure 1 provides an example.

Printer Media Compartment

Figure 4 shows the components inside the media compartment of your printer. Depending on installed options, your printer may look slightly different.

**Note** • For optimal printing quality and proper printer performance across our product line, Zebra strongly recommends the use of genuine Zebra™ supplies as part of the total solution. Specifically, the ZM400, ZM600, RZ400, and RZ600 are designed to work only with genuine Zebra™ printheads, thus maximizing safety and print quality.

</table>
Printer Language Modes

Depending on how your printer was ordered, it came from the factory with firmware that operates in or allows you to use certain commands for one of the following printer languages:

- Zebra Programming Language (ZPL®), which includes XML
- Eltron® Programming Language (EPL™)

**Note** • The following restrictions apply:

- EPL is supported only on 203 dpi printers.
- With older firmware, RFID functionality is available only with R53.X firmware, which operates in ZPL mode with XML.

Firmware Downloads

You may download firmware to the printer at any time to change from one printer language to another. For the latest firmware versions and instructions for downloading them, go to [http://www.zebra.com/firmware](http://www.zebra.com/firmware).

**Note** • When the printer changes from one printer language to another, error messages may appear on the LCD, and some control panel lights may activate in error mode. You may ignore these error messages and lights. When the firmware download is complete, reboot the printer and then load printer defaults to return the printer to Operating mode.

Additional Printer Language Information

The following manuals contain specific information about the different printer language modes. Copies of these manuals are on the CD that came with your printer and at [http://www.zebra.com/manuals](http://www.zebra.com/manuals).

- Zebra Programming Guide for ZPL, ZBI, Set-Get-Do, Mirror, and WML
- EPL2™ Programming Guide
This section provides the tasks that you must complete and the issues that you must consider before you load and configure your printer.

Before You Begin

Review this checklist, and resolve any issues before you set up or use your printer.

☐ **Unpack and Inspect the Printer**  Have you unpacked the printer and inspected it for damage? If you have not, see *Unpack and Inspect the Printer* on page 25.

☐ **Select a Site**  Have you selected an appropriate location for the printer? If you have not, see *Select a Site for the Printer* on page 26.

☐ **Connect to a Data Source**  Have you determined how the printer will connect to a data source (usually a computer)? For more information, see *Select a Data Communication Interface* on page 27.

☐ **Attach a Power Cord**  Do you have the correct power cord for your printer? If you are unsure, see *Power Cord Specifications* on page 33. To attach the power cord and connect the printer to a power source, see *Connect the Printer to a Power Source* on page 32.

☐ **Select Media**  Do you have the correct media for your application? If you are unsure, see *Types of Media* on page 34.

☐ **Select Ribbon**  Do you need to use ribbon, and is the appropriate ribbon available, if needed? If you are unsure, see *Ribbon Overview* on page 36.
Handling the Printer

This section describes how to handle your printer.

Unpack and Inspect the Printer

When you receive the printer, immediately unpack it and inspect for shipping damage.

- Save all packing materials.
- Check all exterior surfaces for damage.
- Raise the media door, and inspect the media compartment for damage to components.

If you discover shipping damage upon inspection:

- Immediately notify the shipping company and file a damage report.
- Keep all packaging material for shipping company inspection.
- Notify your authorized Zebra reseller

Important • Zebra Technologies Corporation is not responsible for any damage incurred during the shipment of the equipment and will not repair this damage under warranty.

Store the Printer

If you are not placing the printer into immediate operation, repackage it using the original packing materials. You may store the printer under the conditions shown in Table 3.

<table>
<thead>
<tr>
<th>Table 3 • Storage Temperature and Humidity</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Temperature</strong></td>
</tr>
<tr>
<td>−40°F to 140°F (−40° to 60°C)</td>
</tr>
</tbody>
</table>

Ship the Printer

If you must ship the printer:

- Turn off (O) the printer, and disconnect all cables.
- Remove any media, ribbon, or loose objects from the printer interior.
- Close the printhead.
- Carefully pack the printer into the original container or a suitable alternate container to avoid damage during transit. A shipping container can be purchased from Zebra if the original packaging has been lost or destroyed.
Select a Site for the Printer

Consider the following when selecting an appropriate location for your printer.

Select a Surface

Select a solid, level surface of sufficient size and strength to accommodate the printer and other equipment (such as a computer), if necessary. The choices include a table, countertop, desk, or cart. For the printer’s weight and dimensions, see General Specifications on page 140.

Provide Proper Operating Conditions

This printer is designed to function in a wide range of environmental and electrical conditions, including a warehouse or factory floor. For more information on the required conditions, see General Specifications on page 140.

Table 4 shows the temperature and relative humidity requirements for the printer when it is operating.

<table>
<thead>
<tr>
<th>Mode</th>
<th>Temperature</th>
<th>Relative Humidity</th>
</tr>
</thead>
<tbody>
<tr>
<td>Thermal Transfer</td>
<td>40° to 105°F (5° to 40°C)</td>
<td>20 to 85% non-condensing.</td>
</tr>
<tr>
<td>Direct Thermal</td>
<td>32° to 105°F (0° to 40°C)</td>
<td>20 to 85% non-condensing</td>
</tr>
</tbody>
</table>

Allow Proper Space

The printer should have enough space around it for you to be able to open the media door. To allow for proper ventilation and cooling, leave open space on all sides of the printer.

Caution • Do not place any padding or cushioning material behind or under the printer because this restricts air flow and could cause the printer to overheat.

Provide a Data Source

If the printer will be located away from the data source (such as a computer), the selected site must provide the appropriate connections to that data source. For more information on the types of communication interfaces and their limitations, see Select a Data Communication Interface on page 27.

Provide a Power Source

Place the printer within a short distance of a power outlet that is easily accessible.
Select a Data Communication Interface

Table 5 provides basic information about data communication interfaces that you can use to connect your printer to a computer. You may send label formats to the printer through any data communication interface that is available. Select an interface that is supported by both your printer and your computer or your Local Area Network (LAN).

Table 5 also shows how to connect the different types of data cables to your printer and computer. The connectors on the back of your computer may be in different locations than on the sample computer shown in this section.

**Caution** • Ensure that the printer power is off (O) before connecting data communications cables. Connecting a data communications cable while the power is on (I) may damage the printer.

<table>

<td><strong>Configuration</strong> Refer to the <em>ZebraNet Wireless User Guide</em> for configuration instructions. A copy of this manual is available at <a href="http://www.zebra.com/manuals">http://www.zebra.com/manuals</a> or on the user CD that came with your printer.</td>
</tr>
</tbody>
</table>
Data Cables and Wireless Cards

You must supply all data cables or removeable radio cards for your application. (Some wireless print servers come with an integrated radio card.)

**Data Cables** Ethernet cables do not require shielding, but all other data cables must be fully shielded and fitted with metal or metallized connector shells. Unshielded data cables may increase radiated emissions above the regulated limits.

To minimize electrical noise pickup in the cable:

- Keep data cables as short as possible.
- Do not bundle the data cables tightly with the power cords.
- Do not tie the data cables to power wire conduits.

**Wireless Cards** For supported wireless cards, refer to the ZebraNet Wireless User Guide. A copy of the manual is available at [http://www.zebra.com/manuals](http://www.zebra.com/manuals) or on the user CD that came with your printer.
Connect the Printer to a Power Source

The AC power cord must have a three-prong female connector on one end that plugs into the mating AC power connector at the rear of the printer. If a power cable was not included with your printer, refer to Power Cord Specifications on page 33.

Caution • For personnel and equipment safety, always use an approved three-conductor power cord specific to the region or country intended for installation. This cord must use an IEC 320 female connector and the appropriate region-specific three-conductor grounded plug configuration.

To connect the printer to a power source, complete these steps:

1. Toggle the printer power switch to the off (O) position.

2. Plug the power cord into the AC power connector (1) on the rear of the printer.

3. Plug the other end of the power cord into a power outlet near the printer.

4. Turn on (I) the printer.

The control panel LCD and lights activate, indicating that the printer is booting up.
Power Cord Specifications

Caution • For personnel and equipment safety, always use an approved three-conductor power cord specific to the region or country intended for installation. This cord must use an IEC 320 female connector and the appropriate region-specific, three-conductor grounded plug configuration.

Depending on how your printer was ordered, a power cord may or may not be included. If one is not included or if the one included is not suitable for your requirements, see Figure 6 and refer to the following guidelines:

• The overall cord length must be less than 9.8 ft. (3 m).
• The cord must be rated for at least 10 A, 250 V.
• The chassis ground (earth) must be connected to ensure safety and reduce electromagnetic interference.

Figure 6 • Power Cord Specifications

1 AC power plug for your country—This should bear the certification mark of at least one of the known international safety organizations (Figure 7).
2 3-conductor HAR cable or other cable approved for your country.
3 IEC 320 connector—This should bear the certification mark of at least one of the known international safety organizations (Figure 7).
4 Length ≤ 9.8 ft. (3 m). Rating 10 Amp, 250 VAC.

Figure 7 • International Safety Organization Certifications
Types of Media

**Important** • Zebra strongly recommends the use of Zebra-brand supplies for continuous high-quality printing. A wide range of paper, polypropylene, polyester, and vinyl stock has been specifically engineered to enhance the printing capabilities of the printer and to prevent premature printhead wear. To purchase supplies, go to [http://www.zebra.com/howtobuy](http://www.zebra.com/howtobuy).

Your printer can use various types of media:

- **Standard media** — Most standard media uses an adhesive backing that sticks individual labels or a continuous length of labels to a liner.

- **Tag stock** — Tags are usually made from a heavy paper. Tag stock does not have adhesive or a liner, and it is typically perforated between tags.

- **Radio frequency identification (RFID) “smart” media** — RFID media can be used in a printer that is equipped with an RFID reader/encoder. RFID labels are made from the same materials and adhesives as non-RFID labels. Each label has an RFID transponder (sometimes called an “inlay”), made of a chip and an antenna, embedded between the label and the liner. The shape of the transponder varies by manufacturer and is visible through the label. All “smart” labels have memory that can be read, and many have memory that can be encoded.

**Important** • Transponder placement within a label depends on the transponder type and the printer model. Make sure that you are using the correct “smart” media for your printer. For more information, refer to the *RFID Programming Guide*. A copy is available at [http://www.zebra.com/manuals](http://www.zebra.com/manuals) or on the user CD that came with your printer.

Table 6 describes roll and fanfold media. Roll media is loaded into the printer while fanfold media may be located inside or outside of the printer.
### Table 6 • Roll and Fanfold Media

<table>
<thead>
<tr>
<th>Media Type</th>
<th>How It Looks</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Non-Continuous Roll Media</td>
<td></td>
<td>Roll media is wound on a 3-in. (76-mm) core. Individual labels are separated by one or more of the following methods:</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• <em>Web media</em> separates labels by gaps, holes, or notches.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• <em>Black mark media</em> uses pre-printed black marks on the back side of the media to indicate label separations.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• <em>Perforated media</em> has perforations that allow the labels or tags to be separated from each other easily. The media may also have black marks or other separations between labels or tags.</td>
</tr>
<tr>
<td>Non-Continuous Fanfold Media</td>
<td></td>
<td>Fanfold media is folded in a zigzag pattern. Fanfold media can have the same label separations as non-continuous roll media. The separations would fall on or near the folds.</td>
</tr>
<tr>
<td>Continuous Roll Media</td>
<td></td>
<td>Roll media is wound on a 3-in. (76-mm) core. Continuous roll media does not have gaps, holes, notches, or black marks to indicate label separations. This allows the image to be printed anywhere on the label. Sometimes a cutter is used to cut apart individual labels.</td>
</tr>
</tbody>
</table>
Ribbon Overview

Ribbon is a thin film that is coated on one side with wax, resin, or wax resin, which is transferred to the media during the thermal transfer process. The media determines whether you need to use ribbon and how wide the ribbon must be.

When ribbon is used, it must be as wide as or wider than the media being used. If the ribbon is narrower than the media, areas of the printhead are unprotected and subject to premature wear.

When to Use Ribbon

Thermal transfer media requires ribbon for printing while direct thermal media does not. To determine if ribbon must be used with a particular media, perform a media scratch test.

To perform a media scratch test, complete these steps:

1. Scratch the print surface of the media rapidly with your fingernail.
2. Did a black mark appear on the media?

<table>
<thead>
<tr>
<th>If a black mark...</th>
<th>Then the media is...</th>
</tr>
</thead>
<tbody>
<tr>
<td>Does not appear on the media</td>
<td>Thermal transfer. A ribbon is required.</td>
</tr>
<tr>
<td>Appears on the media</td>
<td>Direct thermal. No ribbon is required.</td>
</tr>
</tbody>
</table>

Coated Side of Ribbon

Ribbon can be wound with the coated side on the inside or outside. The ribbon used must match the Thermal Transfer option installed. The standard Thermal Transfer option (black ribbon spindle) uses ribbon coated on the outside, and the alternate Thermal Transfer option (gray ribbon spindle, available on the ZM400 and RZ400 only) uses ribbon coated on the inside. If you are unsure which side of a particular roll of ribbon is coated, perform an adhesive test or a ribbon scratch test to determine which side is coated.

Adhesive Test

If you have labels available, perform the adhesive test to determine which side of a ribbon is coated. This method works well for ribbon that is already installed.

To perform an adhesive test, complete these steps:

1. Peel a label from its liner.
2. Press a corner of the sticky side of the label to the outer surface of the roll of ribbon.
3. Peel the label off of the ribbon.
4. Observe the results. Did flakes or particles of ink from the ribbon adhere to the label?

<table>
<thead>
<tr>
<th>If ink from the ribbon...</th>
<th>Then...</th>
</tr>
</thead>
<tbody>
<tr>
<td>Adhered to the label</td>
<td>The ribbon is coated on the outside and can be used with the standard Thermal Transfer option (black ribbon spindle). In the ribbon loading procedure, instructions are marked with this symbol.</td>
</tr>
<tr>
<td>Did not adhere to the label</td>
<td>The ribbon is coated on the inside and can be used with the alternate Thermal Transfer option (gray ribbon spindle). In the ribbon loading procedure, instructions are marked with this symbol.</td>
</tr>
</tbody>
</table>

**Ribbon Scratch Test**

Perform the ribbon scratch test when labels are unavailable.

**To perform a ribbon scratch test, complete these steps:**

1. Unroll a short length of ribbon.

2. Place the unrolled section of ribbon on a piece of paper with the outer surface of the ribbon in contact with the paper.

3. Scratch the inner surface of the unrolled ribbon with your fingernail.

4. Lift the ribbon from the paper.

5. Observe the results. Did the ribbon leave a mark on the paper?

<table>
<thead>
<tr>
<th>If the ribbon...</th>
<th>Then...</th>
</tr>
</thead>
<tbody>
<tr>
<td>Left a mark on the paper</td>
<td>The ribbon is coated on the outside and can be used with the standard Thermal Transfer option (black ribbon spindle).</td>
</tr>
<tr>
<td>Did not leave a mark on the paper</td>
<td>The ribbon is coated on the inside and can be used with the alternate Thermal Transfer option (gray ribbon spindle). In the ribbon loading procedure, instructions are marked with this symbol.</td>
</tr>
</tbody>
</table>

Print Modes and Printer Options

The printer can use different print modes and options for label removal (Table 7). Use a print mode that matches the media being used and the printer options available. For more information on the types of media, see Types of Media on page 34. To select a print mode, see Select Print Mode on page 76.

Print Mode Descriptions and Printer Requirements

Table 7 • Print Modes and Printer Options

<table>
<thead>
<tr>
<th>Print Mode</th>
<th>When to Use/Printer Options Required</th>
<th>Printer Actions</th>
</tr>
</thead>
<tbody>
<tr>
<td>Tear-Off (default setting)</td>
<td>Use for most applications. This mode can be used with any printer options and most media types.</td>
<td>The printer prints label formats as it receives them. The printer operator can tear off the printed labels any time after they print.</td>
</tr>
<tr>
<td>Peel-Off</td>
<td>Use only if the printer has the Peel-Off, Liner Take-Up, or Rewind option.</td>
<td>The printer peels the label from the liner during printing and then pauses until the label is removed. In Peel-Off mode, the liner exits the front of the printer. In Peel-Off mode with Liner Take-Up, the liner winds onto the liner take-up spindle or the rewind spindle.</td>
</tr>
<tr>
<td>Cutter</td>
<td>Use if the printer has a cutter option when you want the labels to be cut apart.</td>
<td>The printer prints a label and then cuts it free.</td>
</tr>
<tr>
<td>Delayed Cut</td>
<td>Use if the printer has a cutter option when you want the printer to cut the labels apart at a signal.</td>
<td>The printer prints a label, pauses, and cuts the label when it receives the ~JK (delayed cut) ZPL command.</td>
</tr>
<tr>
<td>Rewind</td>
<td>Use if the printer has the Rewind option and you want the labels to rewind on a core.</td>
<td>The printer prints without pausing between labels. The media or liner is wound onto a core after printing.</td>
</tr>
<tr>
<td>RFID</td>
<td>Use when printing RFID labels with RZ Series printers or with Z Series printers that have an optional RFID reader/encoder installed.</td>
<td>The printer increases throughput time when printing batches of RFID labels by eliminating backfeed between labels</td>

Load Media

The beginning steps for loading media apply to all printers, including those that have the peel-off, liner take-up, cutter, or rewind option. When you have completed these beginning steps, continue with the media loading instructions for the print mode and printer options that apply to you. For more information about print modes and printer options, see Print Modes and Printer Options on page 40.

Caution • While performing any tasks near an open printhead, remove all rings, watches, hanging necklaces, identification badges, or other metallic objects that could touch the printhead. You are not required to turn off the printer power when working near an open printhead, but Zebra recommends it as a precaution. If you turn off the power, you will lose all temporary settings, such as label formats, and you must reload them before you resume printing.

Beginning Steps for all Print Modes and Printer Options

To begin loading media for all print modes and printer options, complete these steps:

1. Press the printhead release latch to open the printhead assembly. Lift the printhead until it latches open.

2. Slide out the media guide.
3. Insert media into the printer. Follow the instructions for roll or fanfold media, as appropriate.

**Roll Media**

- Remove and discard any tags or labels that are dirty or that are held by adhesives or tape.

- Pull out and, if applicable, flip down the media supply guide.

**Fanfold Media**

- Pull out and, if applicable, flip down the media supply guide.

- Feed the media through the rear or bottom access slot.

---

**Rear Feed**

**Bottom Feed**
**Roll Media (Continued)**

c. Place the roll of media on the media supply hanger. Push the roll as far back as it will go.

d. If applicable, flip up the media supply guide.

**Fanfold Media (Continued)**

c. Drape the media over the media supply hanger.

d. If applicable, flip up the media supply guide.
4. Feed the media under the dancer assembly (1), the upper media sensor (2), and the ribbon sensor (3). Slide the media back until it touches the inside back wall of the upper media sensor.

5. Continue with the final instructions for the desired print mode. The print mode must be compatible with the media being used and the printer options installed. See Print Mode Descriptions and Printer Requirements on page 40 for more information.

- Additional Steps for Tear-Off Mode on page 47
- Additional Steps for Peel-Off Mode (with or without Liner Take-Up) on page 48
- Additional Steps for Cutter or Delayed Cut Mode on page 53
- Additional Steps for Rewind Mode on page 54
Additional Steps for Tear-Off Mode

After completing *Beginning Steps for all Print Modes and Printer Options* on page 43, continue with this section to operate the printer in Tear-Off mode.

**To operate the printer in Tear-Off mode, complete these steps:**

1. Slide in the media guide until it touches the outer edge of the media.

2. Set the printer to Tear-Off mode. See *Select Print Mode* on page 76 for instructions.

3. Close the printhead assembly.

4. If the printer is paused (the Pause light is on), press PAUSE to enable printing.
Additional Steps for Peel-Off Mode (with or without Liner Take-Up)

After completing Beginnning Steps for all Print Modes and Printer Options on page 43, continue with this section to operate the printer in Peel-Off mode with or without liner take-up. Your printer must have the Peel option, the Liner Take-Up option, or the Rewind option installed. See Print Modes and Printer Options on page 40 for more information.

For additional procedures related to the rewind option, see Routine Maintenance for the Rewind Option on page 108.

To operate the printer in Peel-Off mode, complete these steps:

1. Extend the media approximately 18 in. (500 mm) out of the printer.

2. Remove the exposed labels so that only the liner remains.
3. Push down the peel-off mechanism release lever to open the peel assembly.

4. Feed the liner over the tear-off/peel-off bar (1) and behind the peel assembly (2). Make sure that the end of the liner falls outside of the printer.

5. Complete this step only if you want to use Peel-Off mode with liner take-up. Your printer must have the Liner Take-Up option or the Rewind option installed. Follow the instructions for your printer option.

**Rewind Option**

a. Feed the liner under the media alignment roller (1).

**Liner Take-Up Option**

a. Slide the liner into the slot in the liner take-up spindle (1).
Rewind Option (Continued)

b. Loosen the thumbscrew on the rewind media guide.

c. Slide the rewind media guide all the way out, and then fold it down.

d. Slide an empty core onto the rewind spindle.

Liner Take-Up Option (Continued)

b. Push the liner back until it touches the back plate of the liner take-up spindle assembly.

c. Wrap the liner around the liner take-up spindle and turn the spindle counterclockwise to tighten the liner.
Rewind Option (Continued)

e. Wrap the liner around the core and turn the rewind spindle counterclockwise to tighten the liner.

f. Fold up the rewind media guide, and then slide it in until it touches the liner.

g. Tighten the thumbscrew on the rewind media guide.

Liner Take-Up Option (Continued)

(No additional steps for the liner take-up option.)
6. **Caution** • Use the peel release lever and your right hand to close the peel assembly. Do not use your left hand to assist in closing. The top edge of the peel roller/assembly could pinch your fingers.

Close the peel assembly using the peel-off mechanism release lever.

7. Slide in the media guide until it touches the outer edge of the media.

8. Set the printer to Peel-Off mode. See *Select Print Mode on page 76* for instructions.

9. Close the printhead assembly.

10. If the printer is paused (the Pause light is on), press PAUSE to enable printing. Peeling and liner take-up (if used) begin automatically.
Additional Steps for Cutter or Delayed Cut Mode

After completing *Beginning Steps for all Print Modes and Printer Options* on page 43, continue with this section to operate the printer in Cutter or Delayed Cut mode.

**To operate the printer in Cutter or Delayed Cut mode, complete these steps:**

1. **Caution** • The cutter blade is sharp. Do not touch or rub the blade with your fingers.

Feed the media through the cutter (1).

2. Slide in the media guide until it touches the outer edge of the media.

3. Set the printer to Cutter or Delayed Cut mode. See *Select Print Mode* on page 76 for instructions.
4. Close the printhead assembly.

5. If the printer is paused (the Pause light is on), press PAUSE to enable printing. Cutting begins automatically.

Additional Steps for Rewind Mode

After completing Beginning Steps for all Print Modes and Printer Options on page 43, continue with this section to operate the printer in Rewind mode. For additional procedures related to the rewind option, see Routine Maintenance for the Rewind Option on page 108.

To operate the printer in Rewind mode, complete these steps:

1. Pull approximately 18 in. (500 mm) of media through the front of the printer.
2. Feed the media over the peel assembly (1).

3. Feed the media under the media alignment roller (1).

4. Loosen the thumbscrew on the rewind media guide.

5. Slide the rewind media guide all the way out, and then fold it down.
6. Slide an empty core onto the rewind spindle.

7. Wrap the media around the core and turn the rewind spindle counterclockwise to tighten the media. Ensure that the edge of the media is flush against the backplate of the rewind spindle.

8. Fold up the rewind media guide, and then slide it in until it touches the media.

9. Tighten the thumbscrew on the rewind media guide.
10. Slide in the media guide until it touches the outer edge of the media.

11. Set the printer to Rewind mode. See Select Print Mode on page 76 for instructions.

12. Close the printhead assembly.

13. If the printer is paused (the Pause light is on), press PAUSE to enable printing. Rewinding begins automatically.
Load Ribbon

Always use ribbon that is wider than the media to protect the printhead from wear. For direct thermal printing, do not load ribbon in the printer.

The standard Thermal Transfer option (black ribbon spindle) uses ribbon coated on the outside, and the alternate Thermal Transfer option (gray ribbon spindle) uses ribbon coated on the inside. To avoid damaging your printer, follow the directions for the Thermal Transfer option installed in your printer.

Figure 8 shows the ribbon paths for ribbon coated on the outside and ribbon coated on the inside. The coated surfaces of the ribbon are shown in gray when they are visible. To determine which side of a ribbon is printed, see Coated Side of Ribbon on page 36.

---

**Figure 8 • Ribbon Path**

<td>Printhead assembly</td>
</tr>
<tr>
<td>5</td>
<td>Printhead release latch</td>
</tr>
</tbody>
</table>
To load ribbon, complete these steps:

1. Set the ribbon supply spindle for normal or low tension.
   - To place the ribbon supply spindle in the **normal position**, firmly pull out the spindle end cap until it extends and clicks in place, as shown in Figure 9. Use this setting for most applications.
   - To place the ribbon supply spindle in the **low-tension position**, firmly push in the end cap until it retracts and clicks in place, as shown in Figure 9. Use this setting when using a narrow ribbon or if normal tension hampers ribbon movement.

2. Press the printhead release latch to open the printhead assembly. Lift the printhead until it latches open.
3. Insert the ribbon into the printer. In this step, follow the instructions for the Thermal Transfer option installed in your printer.

**Ribbon Coated Outside**
(black ribbon spindle)

a. Hold the ribbon with the loose end unrolling clockwise.

b. Place the roll of ribbon on the ribbon supply spindle (1) and push it all the way back.

c. Pull the end of the ribbon under the printhead assembly (1) and out the front of the printer. Extend the ribbon approximately 24 in. (610 mm) out of the printer.

**Ribbon Coated Inside**
(gray ribbon spindle)

a. Hold the ribbon with the loose end unrolling counterclockwise.

b. Place the roll of ribbon on the ribbon supply spindle (1) and push it all the way back.

c. Pull the end of the ribbon under the printhead assembly (1) and out the front of the printer. Extend the ribbon approximately 24 in. (610 mm) out of the printer.
4. Close the printhead assembly.

5. Wind the ribbon clockwise onto the ribbon take-up spindle (1).

**Ribbon Coated Outside**
- (black ribbon spindle)

**Ribbon Coated Inside**
- (gray ribbon spindle)
Remove Used Ribbon

To remove used ribbon, complete these steps:

1. **Caution** • Do not cut the ribbon directly on the ribbon take-up spindle. Doing so may damage the spindle.

   If the ribbon has not run out, cut or break it before the ribbon take-up spindle (1).

2. To loosen the ribbon, squeeze it against the ribbon take-up spindle tension blades (1). At the same time, turn the ribbon take-up spindle release knob counterclockwise (2).

   The tension blades collapse into the ribbon take-up spindle, loosening the ribbon.

3. Slide the used ribbon off of the ribbon take-up spindle and discard.
Calibrate the Printer

The printer can be set to calibrate automatically, or you can calibrate it manually.

Auto Calibration

When the control panel setting for **MEDIA POWER UP** or **HEAD CLOSE** is set to **CALIBRATION**, the printer automatically calibrates on power up or when the printhead is closed. During auto calibration, the printer determines the label length and sensor settings. The results of the auto calibration are stored in the printer’s temporary memory. These parameters remain in effect until the next calibration is performed or until the printer is power cycled.

**Important** • To retain calibration settings in the printer’s memory when the printer is power cycled, you must save the changes permanently. See *Exit Setup Mode* on page 69.

**Note** • If the control panel settings for **MEDIA POWER UP** or **HEAD CLOSE** are set to **LENGTH, NO MOTION**, or **FEED**, the printer starts printing without auto calibrating. See *Select Media Power-Up Option* on page 92 or *Select Head Close Option* on page 92.

Manual Calibration

Perform a media and ribbon sensor calibration to reset the sensitivity of the sensors so the media and ribbon are detected more accurately. If you change the type of ribbon or media, your printer may operate better if you perform this calibration.

For instructions, refer to *Calibrate Media and Ribbon Sensor Sensitivity* on page 85.
Adjust Printhead Pressure

You may need to adjust printhead pressure if printing is too light on one side, if you use thick media, or if the media drifts from side to side during printing.

See Figure 10. The ZM400 and RZ400 pressure adjustment dials have four possible settings designated by blocks of increasing size embossed on the print mechanism. The smallest block (fully counterclockwise) is considered position 1, and the largest block (fully clockwise) is considered position 4. The ZM600 and RZ600 dials have seven settings instead of four.

Figure 10 • Printhead Pressure Adjustment Dials

To set printhead pressure, complete these steps:

1. Use Table 9 or Table 10 to select the initial dial settings for your media, depending on which printer you have.

Table 9 • ZM400 and RZ400 Printhead Pressure

<table>
<thead>
<tr>
<th>Media Width</th>
<th>Inside Dial</th>
<th>Outside Dial</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 in. (25.4 mm)</td>
<td>3</td>

Print a Configuration Label ............................................... 71
Print a Network Configuration Label ..................................... 72
Standard Control Panel Parameters ...................................... 73
Additional Control Panel Parameters .................................... 98
Setup Mode

After you have installed the media and ribbon and the Power-On Self Test (POST) is complete, the control panel displays PRINTER READY. You may now set printer parameters for your application using the control panel display and the buttons directly below it. If it becomes necessary to restore the initial printer defaults, see FEED and PAUSE Self Test on page 135.

**Important** • Certain printing conditions may require that you adjust printing parameters, such as print speed, darkness, or print mode. These conditions include (but are not limited to):

- printing at high speeds
- peeling the media
- the use of extremely thin, small, synthetic, or coated labels

Because these and other factors affect print quality, run tests to determine the best combination of printer settings and media for your application. A poor match may limit print quality or print rate, or the printer may not function properly in the desired print mode.

**Note** • If the printer is operating on an IP network and you have a ZebraNet wired or wireless print server, you can change the printer’s parameters in these additional ways:

- with ZebraLink™ WebView. For information, see the appropriate print server user guide.
- with ZebraNet Bridge. For information, see the ZebraNet Bridge Enterprise Printer Management User Guide.

**Enter and Use Setup Mode**

Use the LCD on the control panel to view and adjust printer settings through Setup mode. When a parameter is changed, an asterisk (*) appears in the upper left corner of the display to indicate that the value is different from the one currently active in the printer.

<table>
<thead>
<tr>
<th>Press this key...</th>
<th>To do the following...</th>
</tr>
</thead>
<tbody>
<tr>
<td>SETUP/EXIT</td>
<td>enter or exit Setup mode.</td>
</tr>
<tr>
<td>SELECT</td>
<td>select or deselect a parameter.</td>
</tr>
<tr>
<td>PLUS (+)</td>
<td>continue to the next parameter.</td>
</tr>
<tr>
<td>MINUS (-)</td>
<td>return to the previous parameter in the cycle.</td>
</tr>
</tbody>
</table>
Exit Setup Mode

When you exit setup mode, you have several options for saving, changing, or not changing parameters.

To leave Setup mode, complete these steps:

1. While in Setup mode, press SETUP/EXIT. The LCD displays SAVE CHANGES.
2. Press PLUS (+) or MINUS (-) to display the save options:

<table>
<thead>
<tr>
<th>LCD</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>PERMANENT</td>
<td>Stores values in the printer even when power is turned off.</td>
</tr>
<tr>
<td>TEMPORARY</td>
<td>Saves the changes until power is turned off.</td>
</tr>
<tr>
<td>CANCEL</td>
<td>Cancels all changes made since you entered Setup mode,</td>
</tr>
<tr>
<td></td>
<td>except for changes made to the darkness and tear-off settings,</td>
</tr>
<tr>
<td></td>
<td>which go into effect as soon as they are made.</td>
</tr>
<tr>
<td>LOAD DEFAULTS</td>
<td>Restores all parameters other than the network settings back to</td>
</tr>
<tr>
<td></td>
<td>the factory defaults. Use care when loading defaults because</td>
</tr>
<tr>
<td></td>
<td>you will need to reload all settings that you changed manually.</td>
</tr>
<tr>
<td></td>
<td><strong>Note</strong> • On non-RFID printers, loading factory defaults</td>
</tr>
<tr>
<td></td>
<td>causes the printer to auto-calibrate.</td>
</tr>
<tr>
<td>LOAD LAST SAVE</td>
<td>Loads values from the last permanent save.</td>
</tr>
<tr>
<td>DEFAULT NET</td>
<td>Restores the wired and wireless network settings back to factory defaults.</td>
</tr>
</tbody>
</table>

3. Press SETUP/EXIT to select the displayed choice.

When the configuration and calibration sequence is done, PRINTER READY displays.
Change Password-Protected Parameters

Certain parameters, including the communication parameters, are password-protected by factory default.

**Caution** • Do not change password-protected parameters unless you have a complete understanding of the parameters’ functions. If the parameters are set incorrectly, the printer may function unpredictably.

The first time that you attempt to change a password-protected parameter, the printer displays **ENTER PASSWORD**. Before you can change the parameter, you must enter the four-digit numeric password. After you have entered the password correctly, you do not have to enter it again unless you leave Setup mode by pressing **SETUP/EXIT** or by turning off (O) the printer.

**To enter a password for a password-protected parameter, complete these steps:**

1. At the password prompt, use MINUS (-) to change the selected digit position.
2. When you have selected the digit that you wish to change, use PLUS (+) to increase the selected digit value. Repeat these two steps for each digit of the password.
3. After entering the password, press **SELECT**.
   The parameter you selected to change is displayed. If the password was entered correctly, you can change the value.

**Default Password Value**

The default password value is **1234**. The password can be changed using the Zebra Programming Language (ZPL) command **^KP** (Define Password) or using the printer’s web pages (ZebraNet wired or wireless print server required).

**Disable the Password Protection Feature**

You can disable the password protection feature so that it no longer prompts you for a password by setting the password to **0000** via the **^KP** ZPL command. To re-enable the password-protection feature, send the ZPL command **^KPx**, where x can be any number from 1 to 9999.
Print a Configuration Label

A configuration label lists the printer settings that are stored in configuration memory. After you load the media, print a configuration label as a record of your printer’s current settings. Keep the label to use when troubleshooting printing problems.

To print a configuration label, complete these steps:

1. On the control panel, press SETUP/EXIT.

2. Press PLUS (+) or MINUS (-) to scroll through the parameters until you reach LIST SETUP.

3. Press SELECT to select the parameter.

4. Press PLUS (+) to confirm printing.

A configuration label prints (Figure 11).

Figure 11 • Sample Configuration Label
Print a Network Configuration Label

If you are using a print server, you can print a network configuration label after the printer is connected to the network.

To print a network configuration label, complete these steps:

1. On the control panel, press SETUP/EXIT.

2. Press PLUS (+) or MINUS (-) to scroll through the parameters until you reach LIST NETWORK.

3. Press SELECT to select the parameter.

4. Press PLUS (+) to confirm printing.

A network configuration label prints (Figure 12). An asterisk designates whether the wired or wireless print server is active. If no wireless print server is installed, the wireless portion of the label does not print.

Figure 12 • Sample Network Configuration Label
(with a Wireless Print Server installed)
Standard Control Panel Parameters

Table 11 shows parameters in the order in which they are displayed when you press PLUS (+) after entering Setup mode. For parameters that do not appear in this table, see Additional Control Panel Parameters on page 98.

Note • Your label preparation software or the printer driver may override adjustments made through the control panel. Refer to the software or driver documentation for more information.

Table 11 • Printer Parameters (Page 1 of 25)

<table>
<thead>
<tr>
<th>Language/Parameter</th>
<th>Action/Explanation</th>

</tr>
</thead>
<tbody>
<tr>
<td><img src="image" alt="PRINT SPEED" /></td>
<td><strong>Adjust Print Speed</strong>&lt;br&gt;Adjusts the speed for printing a label (given in inches per second). Slower print speeds typically yield better print quality. Print speed changes take effect upon exiting Setup mode.&lt;br&gt;&lt;br&gt;<strong>Default Value (ZPL):</strong> 2 IPS&lt;br&gt;<strong>Default Value (EPL):</strong> 6 IPS&lt;br&gt;&lt;br&gt;<strong>Range:</strong>&lt;br&gt;• 200 dpi: 2 to 10 IPS&lt;br&gt;• 300 dpi: 2 to 8 IPS&lt;br&gt;• 600 dpi: 1 to 4 IPS&lt;br&gt;&lt;br&gt;<strong>To change the value shown:</strong>&lt;br&gt;1. Press SELECT to select the parameter.&lt;br&gt;2. Press PLUS (+) to increase the value.&lt;br&gt;3. Press MINUS (-) to decrease the value.&lt;br&gt;4. Press SELECT to accept any changes and deselect the parameter.</td>
</tr>
</tbody>
</table>
Adjust the Tear-Off Position

This parameter establishes the position of the media over the tear-off/peel-off bar after printing.

See Figure 13. Higher numbers move the media out (the tear line moves closer to the leading edge of the next label), and lower numbers move the media in (the tear line moves closer to the edge of the label just printed).

**Figure 13 • Tear-Off Position Adjustment**

<p>| | |</p>

<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Media direction</td>
</tr>
<tr>
<td>2</td>
<td>Factory-set tear line location at position 00</td>
</tr>
</tbody>
</table>

Default Value: 0  
Range: -120 to +120

To change the value shown:
1. Press SELECT to select the parameter.
2. Press PLUS (+) to increase the value. Each press adjusts the tear-off position by four dot rows.
3. Press MINUS (-) to decrease the value. Each press adjusts the tear-off position by four dot rows.
4. Press SELECT to accept any changes and deselect the parameter.
### Select Print Mode

This parameter tells the printer how printed labels will be removed. Make sure that you select a print mode that is compatible with your printer and printer options. For information about how the print modes work with different printer options, see *Print Modes and Printer Options* on page 40.

**Default Value (non-RFID printers):** TEAR-OFF  
**Selections (non-RFID printers):** TEAR-OFF, PEEL-OFF, CUTTER, DELAYED CUT, LINERLESS-P, LINERLESS-R, LINERLESS-T, REWIND  

**Default Value (RFID printers):** RFID MODE  
**Selections (RFID printers):** TEAR-OFF, PEEL-OFF, CUTTER, DELAYED CUT, LINERLESS-P, LINERLESS-R, RFID MODE, LINERLESS-T, REWIND

*Note: The linerless selections apply only to printers that have the Linerless option.*

**To change the value shown:**
1. Press SELECT to select the parameter.  
2. Press PLUS (+) or MINUS (-) to scroll through the options.  
3. Press SELECT to accept any changes and deselect the parameter.

### Set Media Type

This parameter tells the printer the type of media that you are using (see *Types of Media* on page 34 for more information). Selecting continuous media requires that you include a label length instruction in your label format (\(^\text{LL}xxxx\) if you are using ZPL or ZPL II).  

When non-continuous media is selected, the printer feeds media to calculate label length (the distance between two recognized registration points of the inter-label gap, webbing, or alignment notch or hole).

**Default Value:** GAP/NOTCH  
**Selections:** GAP/NOTCH, MARK, CONTINUOUS

**To change the value shown:**
1. Press SELECT to select the parameter.  
2. Press PLUS (+) or MINUS (-) to scroll through the options.  
3. Press SELECT to accept any changes and deselect the parameter.

<td>Range: 2 to 2496 dots</td>
</tr>
<tr>
<td>Note • 600 dpi is not available on the RZ400.</td>
<td></td>
</tr>
<tr>
<td>Default Value: 2496</td>
<td></td>
</tr>
</tbody>
</table>

Note • Setting the width too narrow can result in portions of a label format not being printed on the media. Setting the width too wide wastes formatting memory and can cause printing off of the label and on the platen roller. This setting can affect the horizontal position of the label format if the image was inverted using the ^POI ZPL II command. |

To change the value shown: |
| 1. Press SELECT to select the parameter. |
| 2. Press PLUS (+) or MINUS (-) to change the value shown. |
| 3. Press SELECT to accept any changes and deselect the parameter. |
Set Maximum Label Length
This parameter is used during the media portion of the calibration process. Always set maximum label length to a value that is at least 1.0 in. (25.4 mm) greater than the actual label length (Figure 14). If the value is set to a smaller value than the label length, the printer assumes that continuous media is loaded, and the printer cannot calibrate.

For example, if the label length is 5.0 inches (126 mm) including the interlabel gap, set the parameter for 6.0 inches (152 mm). If the label length is 7.5 inches (190 mm), set the parameter for 9.0 inches (229 mm).

Figure 14 • Label Length

1. Label length (including interlabel gap)
2. Interlabel gap
3. Set maximum label length to approximately this value

Default Value: 39.0 inches (988 mm)
Selections: Values are adjustable in one-inch (25.4 mm) increments

To change the value shown:
1. Press SELECT to select the parameter.
2. Press PLUS (+) or MINUS (-) to change the value shown.
3. Press SELECT to accept any changes and deselect the parameter.

<th>Action/Explanation</th>
</tr>
</thead>
</table>
| Set Early Warning for Maintenance | When this feature is enabled, the printer provides warnings when the printhead needs to be cleaned.  
*Default Value*: MAINT. OFF  
*Selections*: MAINT. OFF, MAINTENANCE ON

**To change the Early Warning settings:**
1. Press SELECT to select the parameter.
2. When the LCD displays **EARLY WARNING MAINTENANCE**, press PLUS (+) or MINUS (-) to toggle between **OFF** and **ON**. (If you are prompted for a password, enter your password using the instructions in *Change Password-Protected Parameters* on page 70.)
3. Exit Setup mode and save changes to enable additional parameters related to the early warning system.
4. Enter Setup mode again and go to the following parameters to enter the printhead cleaning interval and the printhead life.
5. Press SELECT to accept any changes and deselect the parameter.

| Set Printhead Cleaning Interval for Early Warning | This parameter appears only when Early Warning for Maintenance is enabled. This value should correspond to the length of the media or ribbon roll that you are using.  
*Default Value*: 450 M/1476 FT  
*Selections*: 100 M/328 FT to 450 M/1476 FT in 50 M increments

**To change the value shown:**
1. Press SELECT to select the parameter.
2. Press PLUS (+) or MINUS (-) to set the printhead cleaning interval to the desired number of inches of media or ribbon.  
When the printhead reaches the set length, **WARNING CLEAN PRINTHEAD** appears on the LCD. If the alert function is enabled, the printer generates an alert.
1. Press SELECT to accept any changes and deselect the parameter.

| Reset Printhead Cleaning Counter for Early Warning | This parameter appears only when Early Warning for Maintenance is enabled.  
**To reset the printhead cleaning counter:**
1. Press SELECT to select the parameter.
2. Did you clean the printhead?  
• If you cleaned the printhead, press PLUS (+) to select **YES**.  
• If you did not clean the printhead, press MINUS (-) to select **NO**.
3. Press SELECT to accept any changes and deselect the parameter.
### Configuration

</tr>
<tr>
<td><strong>View User-Controlled Counter 2</strong></td>
<td>This parameter displays the total length of media that the printer has printed since this parameter was last reset. You can use ZPL commands to change the unit of measure and reset this counter. For the commands, refer to the <em>Programming Guide for ZPL, ZBI, Set-Get-Do, Mirror, and WML</em>.</td>
</tr>
</tbody>
</table>
### Print Counter Readings
Prints a label that lists the odometer readings for the following:
- the non-resettable counter
- the two user-controlled counters
- the Early Warning for Maintenance counters, which indicate when the printhead was last cleaned and the printhead life
If the Early Warning for Maintenance feature is disabled, the counters related to it do not print.

**To print a list of the odometer readings:**
1. Press **SELECT** to select the parameter.
2. Press **PLUS (+)** to print the odometer readings.
3. Press **SELECT** to deselect the parameter.

### List Fonts
This option prints a label that lists the available fonts in the printer, including standard printer fonts plus any optional fonts. Fonts may be stored in RAM or Flash memory.

**To print a list of the available fonts:**
1. Press **SELECT** to select the parameter.
2. Press **PLUS (+)** to select **PRINT**.
3. Press **SELECT** to deselect the parameter.

### List Bar Codes
This option prints a label that lists the available bar codes in the printer. Bar codes may be stored in RAM or Flash memory.

**To print a list of the available bar codes:**
1. Press **SELECT** to select the parameter.
2. Press **PLUS (+)** to select **PRINT**.
3. Press **SELECT** to deselect the parameter.

### List Images
This option prints a label that lists the available images stored in the printer’s RAM, Flash memory, or optional memory card.

**To print a list of the available images:**
1. Press **SELECT** to select the parameter.
2. Press **PLUS (+)** to select **PRINT**.
3. Press **SELECT** to deselect the parameter.

### List Formats
This option prints a label that lists the available formats stored in the printer’s RAM, Flash memory, or optional memory card.

**To print a list of the available formats:**
1. Press **SELECT** to select the parameter.
2. Press **PLUS (+)** to select **PRINT**.
3. Press **SELECT** to deselect the parameter.

<td>2. Press PLUS (+) to select PRINT.</td>
</tr>
<tr>
<td></td>
<td>3. Press SELECT to deselect the parameter.</td>
</tr>
</tbody>
</table>
To format a memory card:

1. Press SELECT to select the parameter.

2. Press PLUS (+) to select A: or OPT:MEM (APL-D only).
   - If your printer is set to require a password, you are prompted to enter the password.

3. Enter the password. For instructions, see Change Password-Protected Parameters on page 70.

4. Press the appropriate button again to select the desired card.
   - The display shows ARE YOU SURE?

5. Do you want to continue?
   - Press MINUS (-) to select NO to cancel the request and return to FORMAT CARD prompt.
   - Press PLUS (+) to select YES and begin initialization.
   - When initialization is complete, the control panel displays FORMATTING CARD COMPLETED.

6. Press SELECT to deselect the parameter.

Note • Depending on the amount of memory in the memory card, initialization may take up to 5 minutes to complete.
Initialize Flash Memory
This option erases all previously stored information from Flash memory.

**Caution** • This option completely erases the Flash memory.

**To initialize Flash memory:**
1. Press SELECT to select the parameter.
2. If prompted for a password, enter the printer password. For instructions, see *Change Password-Protected Parameters on page 70.*

   The display shows **INITIALIZE FLASH?**
3. Press PLUS (+) to select **YES**.

   The display shows **ARE YOU SURE?**
4. Do you want to continue?
   - Press MINUS (-) to select **NO** to cancel the request and return to the **INITIALIZE FLASH** prompt.
   - Press PLUS (+) to select **YES** and begin initialization.

   When initialization is complete, the control panel displays **INITIALIZING MEMORY COMPLETED**.

**Note** • Depending on the amount of free FLASH memory, initialization may take up to 1 minute to complete.

5. Press SELECT to accept any changes and deselect the parameter.

Print Sensor Profile
A sensor profile shows sensor settings compared to actual sensor readings. This label (which will extend across several actual labels or tags) can be used to troubleshoot printing problems. To interpret the results of the sensor profile, see **Sensor Profile on page 137.**

**To print a sensor profile:**
1. Press SELECT to select the parameter.
2. Press PLUS (+) to start this standard calibration procedure and print a media sensor profile.
3. If the sensitivity of the sensors must be adjusted, perform **Calibrate Media and Ribbon Sensor Sensitivity** on page 85.
4. Press SELECT to accept any changes and deselect the parameter.
Calibrate Media and Ribbon Sensor Sensitivity

Use this procedure to adjust sensitivity of media and ribbon sensors.

**Important** • Follow this procedure exactly as presented. All of the steps must be performed even if only one of the sensors requires adjustment. You may press MINUS (-) at any step in this procedure to cancel the process.

To perform a media and ribbon sensor calibration:

1. Press SELECT to select the parameter.
2. Press PLUS (+) to start the calibration procedure.
   The LOAD BACKING prompt displays.
3. Open the printhead.
4. Remove approximately 8 in. (203 mm) of labels from the backing (liner), and pull the media into the printer so that only the backing is between the media sensors.
5. If your printer has the Peel-Off, Liner Take-Up, or Rewind option, complete the following substeps:
   a. Push down the peel-off mechanism release lever to open the peel assembly.
   b. Feed the liner over the tear-off/peel-off bar (1) and behind the peel assembly (2). Make sure that the end of the liner falls outside of the printer.
Table 11 • Printer Parameters (Page 14 of 25)

<table>
<thead>
<tr>
<th>Language/Parameter</th>
<th>Action/Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>(continued from previous page)</td>
<td>Calibrate Media and Ribbon Sensor Sensitivity (continued)</td>
</tr>
</tbody>
</table>

**Caution** • Use the peel release lever and your right hand to close the peel assembly. Do not use your left hand to assist in closing. The top edge of the peel roller/assembly could pinch your fingers.

c. Close the peel assembly using the peel-off mechanism release lever.

4. Leave the printhead open.
5. Press PLUS (+) to continue.

The **REMOVE RIBBON** prompt displays.

1. Remove the ribbon (if used).
2. Close the printhead.
3. Press PLUS (+) to continue.

The message **CALIBRATING PLEASE WAIT** displays.

The printer adjusts the scale (gain) of the signals that it receives from the media and ribbon sensors based on the specific media and ribbon combination being used. On the sensor profile, this essentially corresponds to moving the peak of the graph up or down to optimize the readings for your application.

When calibration is complete, **RELOAD ALL** displays.

1. Open the printhead and pull the media forward until a label is positioned under the media sensor.
2. Reload the ribbon (if used).
3. Close the printhead.
4. Press PLUS (+) to continue.

The printer performs an auto-calibration. During this process, the printer checks the readings for the media and ribbon based on the new scale established, determines the label length, and determines the print mode. To see the new readings on the new scale, print a sensor profile.

1. Press **SELECT** to accept any changes and deselect the parameter.
Table 11 • Printer Parameters (Page 15 of 25)

<table>
<thead>
<tr>
<th>Language/Parameter</th>

</table>
| ![Parallel Comm.](image) BIDIRECTIONAL | Set Parallel Communications  
Select the communications port that matches the one being used by the host computer.  

Default Value: BIDIRECTIONAL  
Selections: BIDIRECTIONAL, UNIDIRECTIONAL  

To change the value shown:  
1. Press SELECT to select the parameter.  
2. Press PLUS (+) or MINUS (-) to scroll through the options.  
3. Press SELECT to accept any changes and deselect the parameter. |
| ZPL only  
![Serial Comm.](image) RS232 | Set Serial Communications  
Select the communications port that matches the one being used by the host computer. This setting applies only when the serial port is used.  

Note • Select RS232 if you are using an external adapter to enable RS422/485 operation.  

Default Value: RS232  
Selections: RS232, RS485 MULTIDROP  

To change the value shown:  
1. Press SELECT to select the parameter.  
2. Press PLUS (+) or MINUS (-) to scroll through the options.  
3. Press SELECT to accept any changes and deselect the parameter. |
| ![Baud](image) 9600 | Set Baud  
This setting applies only when the serial port is used. The baud setting of the printer must match the baud setting of the host computer for accurate communications to take place. Select the value that matches the one being used by the host computer.  

Default Value: 9600  
Selections (ZPL, APL-I, APL-D): 300, 600, 1200, 2400, 4800, 9600, 14400, 19200, 28800, 38400, 57600, 115200  
Selections (EPL): 1200, 2400, 4800, 9600, 19200, 38400, 57600, 115200  

To change the value shown:  
1. Press SELECT to select the parameter.  
2. Press PLUS (+) or MINUS (-) to scroll through the options.  
3. Press SELECT to accept any changes and deselect the parameter. |
### Set Data Bits

This setting applies only when the serial port is used. The data bits of the printer must match the data bits of the host computer for accurate communications to take place. Set the data bits to match the setting being used by the host computer.

**Default Value:** 8 BITS  
**Selections:** 7 BITS, 8 BITS  

**To change the value shown:**
1. Press SELECT to select the parameter.  
2. Press PLUS (+) or MINUS (-) to toggle between the options.  
3. Press SELECT to accept any changes and deselect the parameter.

### Set Parity

This setting applies only when the serial port is used. The parity of the printer must match the parity of the host computer for accurate communications to take place. Select the parity that matches the one being used by the host computer.

**Default Value:** NONE  
**Selections:** EVEN, ODD, NONE  

**To change the value shown:**
1. Press SELECT to select the parameter.  
2. Press PLUS (+) or MINUS (-) to scroll through the options.  
3. Press SELECT to accept any changes and deselect the parameter.

### Set Host Handshake

This setting applies only when the serial port is used. The handshake protocol of the printer must match the handshake protocol of the host computer for communication to take place. Select the handshake protocol that matches the one being used by the host computer.

**Default Value (ZPL):** XON/XOFF  
**Selections (ZPL):** XON/XOFF, DSR/DTR, RTS/CTS  

**Default Value (EPL):** DTR & XON/XOFF  
**Selections (EPL):** DTR & XON/XOFF, DTR  

**To change the value shown:**
1. Press SELECT to select the parameter.  
2. Press PLUS (+) or MINUS (-) to scroll through the options.  
3. Press SELECT to accept any changes and deselect the parameter.
## Table 11 • Printer Parameters (Page 17 of 25)

<table>
<thead>
<tr>
<th>Language/Parameter</th>
<th>Action/Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>ZPL only</strong></td>
<td><strong>Set Protocol</strong></td>
</tr>
</tbody>
</table>
| ![Protocol Icon]   | Protocol is a type of error checking system. Depending on the selection, an indicator may be sent from the printer to the host computer signifying that data has been received. Select the protocol that is requested by the host computer. Further details on protocol can be found in the *Programming Guide for ZPL, ZBI, Set-Get-Do, Mirror, and WML*.  

*Default Value:* NONE  
*Selections:* NONE, ZEBRA, ACK_NAK  

**Note** • **ZEBRA** is the same as **ACK_NAK**, except that **ZEBRA** response messages are sequenced. If **ZEBRA** is selected, the printer must use **DSR/DTR** for host handshake protocol.  

**To change the value shown:**  
1. Press **SELECT** to select the parameter.  
2. Press **PLUS (+)** or **MINUS (-)** to scroll through the options.  
3. Press **SELECT** to accept any changes and deselect the parameter. |
| **ZPL only**       | **Set Network ID** |
| ![Network ID Icon] | This parameter assigns a unique number to the printer when the printer is operating in an RS422/485 multi-drop network environment (an external RS422/485 adapter is required). This gives the host computer the means to address a specific printer. This does not affect TCP/IP or IPX networks.  

*Default Value:* 000  
*Range:* 000 to 999  

**To change the value shown:**  
1. Press **SELECT** to select the parameter.  
2. Press **MINUS (-)** to move to the next digit position.  
3. Press **PLUS (+)** to increase the value of the digit.  
4. Press **SELECT** to accept any changes and deselect the parameter. |
| **ZPL only**       | **Set Communications Mode** |
| ![Communications Mode Icon] | The communication diagnostics mode is a troubleshooting tool for checking the interconnection between the printer and the host computer. For more information, see *Communications Diagnostics Test* on page 136.  

*Default Value:* NORMAL MODE  
*Selections:* NORMAL MODE, DIAGNOSTICS  

**To select communication diagnostics mode:**  
1. Press **SELECT** to select the parameter.  
2. Press **PLUS (+)** or **MINUS (-)** to toggle between the options.  
3. Press **SELECT** to accept any changes and deselect the parameter. |
### Table 11 • Printer Parameters (Page 18 of 25)

<table>
<thead>
<tr>
<th>Language/Parameter</th>
<th>Action/Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>ZPL only</strong></td>
<td></td>
</tr>
</tbody>
</table>
| ![Control Prefix Character](image) | Set Control Prefix Character  
The printer looks for this two-digit hex character to indicate the start of a ZPL/ZPL II control instruction.  
**Note** • Do not use the same hex value for the control, format, and delimiter character. The printer must see different characters to work properly.  
*Default Value:* 7E ~  
*Range:* 00 to FF  
**To change the value shown:**  
1. Press SELECT to select the parameter.  
2. Press MINUS (-) to move to the next digit position.  
3. Press PLUS (+) to increase the value of the digit.  
4. Press SELECT to accept any changes and deselect the parameter. |
| ![Format Prefix Character](image) | Set Format Prefix Character  
The format prefix is a two-digit hex value used as a parameter place marker in ZPL/ZPL II format instructions. The printer looks for this hex character to indicate the start of a ZPL/ZPL II format instruction. See the Programming Guide for ZPL, ZBI, Set-Get-Do, Mirror, and WML for more information.  
**Note** • Do not use the same hex value for the control, format, and delimiter character. The printer must see different characters to work properly.  
*Default Value:* 5E ^  
*Range:* 00 to FF  
**To change the value shown:**  
1. Press SELECT to select the parameter.  
2. Press MINUS (-) to move to the next digit position.  
3. Press PLUS (+) to increase the value of the digit.  
4. Press SELECT to accept any changes and deselect the parameter. |
### ZPL only Set Delimiter Character

The delimiter character is a two-digit hex value used as a parameter place marker in ZPL/ZPL II format instructions. See the Programming Guide for ZPL, ZBI, Set-Get-Do, Mirror, and WML for more information.

**Note** • Do not use the same hex value for the control, format, and delimiter character. The printer must see different characters to work properly.

*Default Value:* 2C ,  
*Range:* 00 to FF

**To change the value shown:**

1. Press SELECT to select the parameter.
2. Press MINUS (-) to move to the next digit position.
3. Press PLUS (+) to increase the value of the digit.
4. Press SELECT to accept any changes and deselect the parameter.

### ZPL only Select ZPL Mode

The printer remains in the selected mode until it is changed by this parameter or by using a ZPL/ZPL II command. The printer accepts label formats written in either ZPL or ZPL II, eliminating the need to rewrite any ZPL formats that already exist. See the Programming Guide for ZPL, ZBI, Set-Get-Do, Mirror, and WML for more information on the differences between ZPL and ZPL II.

*Default Value:* ZPL II  
*Range:* ZPL II, ZPL

**To change the value shown:**

1. Press SELECT to select the parameter.
2. Press PLUS (+) or MINUS (-) to toggle between the options.
3. Press SELECT to accept any changes and deselect the parameter.

Additional Control Panel Parameters

Additional parameters appear in the following situations.

- When a Radio Frequency Identification (RFID) reader is installed. For more information, refer to the *RFID Programming Guide*.

- When a wired print server is installed in the printer. For more information, refer to the *ZebraNet 10/100 Print Server User and Reference Guide*.

- When a wireless print server is installed in the printer. Refer to the *ZebraNet Wireless User Guide*.

Copies of the print server manuals and the *RFID Programming Guide* are available at [http://www.zebra.com/manuals](http://www.zebra.com/manuals) or on the user CD that came with your printer.
This section provides routine cleaning and maintenance procedures.

Replacing Printer Components

Ordering Replacement Parts

For optimal printing quality and proper printer performance across our product line, Zebra strongly recommends the use of genuine Zebra™ supplies as part of the total solution. Specifically, the ZM400, ZM600, RZ400, and RZ600 are designed to work only with genuine Zebra™ printheads, thus maximizing safety and print quality.

Contact your authorized Zebra reseller for part ordering information, or see Contacts on page 11 for contact addresses and telephone numbers.

Recycling Printer Components

The majority of this printer’s components are recyclable. The printer’s main logic board includes a battery that you should dispose of properly.

Do not dispose of any printer components in unsorted municipal waste. Please dispose of the battery according to your local regulations, and recycle the other printer components according to your local standards. For more information, see http://www.zebra.com/environment.

Lubrication

No lubrication is needed for this printer.

Caution • Some commercially available lubricants will damage the finish and the mechanical parts if used on this printer.
Cleaning Schedule and Procedures

**Important** • Zebra is not responsible for damage caused by the use of cleaning fluids on this printer.

Specific cleaning procedures are provided on the following pages. **Table 13** shows the recommended cleaning schedule. These intervals are intended as guidelines only. You may have to clean more often, depending upon your application and media.

* Zebra recommends using Preventive Maintenance Kit (part number 47362). In place of this kit, you may use a clean swab dipped in a solution of isopropyl alcohol (minimum 90%) and deionized water (maximum 10%).

### Clean the Exterior

You may clean the exterior surfaces of the printer with a lint-free cloth and a small amount of a mild detergent, if necessary. Do not use harsh or abrasive cleaning agents or solvents.
Clean the Printhead and Platen Roller

You can minimize printhead wear and maintain print quality with regular preventive measures. Over time, the movement of media or ribbon across the printhead wears through the protective ceramic coating, exposing and eventually damaging the print elements (dots). To avoid abrasion:

- Clean the printhead frequently, and use well-lubricated thermal transfer ribbons with backings optimized to reduce friction.
- Minimize printhead pressure and burn temperature settings by optimizing the balance between the two.
- Ensure that the thermal transfer ribbon is as wide or wider than the label media to prevent exposing the elements to the more abrasive label material.

For best results, clean the printhead after changing every roll of ribbon. Inconsistent print quality, such as voids in the bar code or graphics, may indicate a dirty printhead.

**Caution** • While performing any tasks near an open printhead, remove all rings, watches, hanging necklaces, identification badges, or other metallic objects that could touch the printhead. You are not required to turn off the printer power when working near an open printhead, but Zebra recommends it as a precaution. If you turn off the power, you will lose all temporary settings, such as label formats, and you must reload them before you resume printing.

**Note** • For printers with a peel assembly, keep the peel assembly closed while cleaning the platen roller to reduce the risk of bending the tear-off/peel-off bar.

**Figure 15 • Location of the Printhead and Platen Roller**
To clean the printhead and platen roller, complete these steps:

1. Open the printhead assembly.

2. Remove the media and ribbon.

3. Using the swab from the Preventive Maintenance Kit (part number 47362), wipe along the brown strip on the printhead assembly from end to end. In place of the Preventive Maintenance Kit, you may use a clean swab dipped in a solution of isopropyl alcohol (minimum 90%) and deionized water (maximum 10%). Allow the solvent to evaporate.

**Caution •** The printhead may be hot and could cause severe burns. Allow the printhead to cool.

**Caution •** Before touching the printhead assembly, discharge any built-up static electricity by touching the metal printer frame or by using an antistatic wriststrap and mat.
4. While manually rotating the platen roller, clean it thoroughly with the swab. Allow the solvent to evaporate.

5. Reload media and ribbon, and close the printhead assembly.

**Note** • If performing this procedure does not improve print quality, try cleaning the printhead with *Save-A-Printhead* cleaning film. This specially coated material removes contamination buildup without damaging the printhead. Call your authorized Zebra reseller for more information.
Clean the Media Compartment and Sensors

To clean the media compartment and sensors, complete these steps:

1. Brush or vacuum any accumulated paper lint and dust away from the media and ribbon paths.

2. Brush or vacuum any paper lint and dust away from the sensors (see Figure 16).

Figure 16 • Cleaning the Sensors

Clean the Cutter Module

If the cutter is not cutting the labels cleanly or if it jams with labels, clean the cutter.

Caution • For personnel safety, always power off and unplug the printer before performing this procedure.

To clean the cutter module, complete these steps:

1. Turn the printer off (O), and unplug the printer from its power source.

2. Caution • The cutter blade is sharp. Do not touch or rub the blade with your fingers.

   Remove the cutter shield (1) by removing the cutter shield thumbscrew and lock washer (2).

3. To expose the V-shaped cutter blade, turn the cutter motor thumbscrew (1) counterclockwise to lower the blade.
4. See Figure 17. Using the swab from the Preventive Maintenance Kit (part number 47362), wipe along the upper cutting surface (1) and the cutter blade (2). In place of the Preventive Maintenance Kit, you may use a clean swab dipped in a solution of isopropyl alcohol (minimum 90%) and deionized water (maximum 10%). Allow the solvent to evaporate.

5. Replace the cutter shield.

6. Plug the printer into its power source, and then turn on (I) the printer.

   The lower cutter blade returns to its correct operating position.

7. If the cutter continues to perform unsatisfactorily, contact an authorized service technician.
Routine Maintenance for the Rewind Option

When you use the Rewind option, you will periodically need to remove printed labels or used liner from the rewind spindle. You may also need to adjust the media alignment for the Rewind option.

Remove Printed Labels or Liner from the Rewind Spindle

To remove printed labels or liner from the rewind spindle, complete these steps:

1. Cut the liner between the media alignment spindle and the rewind spindle.

2. Rotate the take-up spindle counterclockwise until the rewind media guide is fully upright.

3. Loosen the thumbscrew on the rewind media guide.
4. Slide the rewind media guide all the way out, and then fold it down.

5. Slide the core with the liner from the take-up spindle.
Adjust Media Alignment for Rewind Option

The instructions below apply only if the printer has a Rewind option. The liner should be installed flush against the backplate of the rewind spindle to prevent the media/backing from winding too loosely.

Perform the adjustments in the order given. Do only what is needed to solve the problem.

To adjust the media alignment for printers with the Rewind option, complete these steps:

1. Turn the adjustment dial (1) clockwise to move the media toward the backplate (2).

2. Turn the adjustment dial (1) counter clockwise to move the media away from the backplate (2).
This section provides information about errors that you might need to troubleshoot. Assorted diagnostic tests are included.

Troubleshooting Checklists

If an error condition exists with the printer, review this checklist:

- Are noncontinuous labels being treated as continuous labels? If yes, see Calibrate Media and Ribbon Sensor Sensitivity on page 85.
- Is the printer reporting a ribbon error when ribbon is loaded properly? If yes, see Calibrate Media and Ribbon Sensor Sensitivity on page 85.
- Are you experiencing problems with print quality? If yes, see Print Quality Problems on page 117.
- Are you experiencing communications problems? If yes, see Communications Problems on page 121.

If the labels are not printing or advancing correctly, review this checklist:

- Are you using the correct type of labels? Review the types of label in Types of Media on page 34.
- Are you using a label that is narrower than the maximum print width? See Set Print Width on page 77.
- Review the label- and ribbon-loading illustrations in Load Media on page 43 and Load Ribbon on page 58.
- Does the printhead need to be adjusted? See Adjust Printhead Pressure on page 64 for more information.
- Do the sensors need to be calibrated? See Calibrate Media and Ribbon Sensor Sensitivity on page 85 for more information.

If none of the above suggestions correct the problem, review this checklist:

- Perform one or more of the self-tests given in Printer Diagnostics on page 129. Use the results to help identify the problem.
- If you are still having problems, see Contacts on page 11 for customer support information.
LCD Error Messages

The LCD displays messages when there is an error. See Table 14 for LCD errors, the possible causes, and the recommended solutions.

Table 14 • LCD Error Messages

<tr>
<td>ERROR CONDITION RIBBON OUT</td>
<td>In thermal transfer mode, ribbon is not loaded or incorrectly loaded.</td>
<td>Load ribbon correctly. See Load Ribbon on page 58.</td>
</tr>
</tbody>
</table>
| The printer stops; the ERROR light flashes. | | 1. Load ribbon correctly. See Load Ribbon on page 58.  
2. Calibrate the sensors. See Calibrate Media and Ribbon Sensor Sensitivity on page 85. |
| In thermal transfer mode, the ribbon sensor is not detecting ribbon. | | |
| In thermal transfer mode, media is blocking the ribbon sensor. | 1. Load media correctly. See Load Media on page 43.  
2. Calibrate the sensors. See Calibrate Media and Ribbon Sensor Sensitivity on page 85. | |
| In thermal transfer mode, the printer did not detect the ribbon even though it is loaded correctly. | 1. Print a sensor profile. See Print Sensor Profile on page 84. The ribbon out threshold (1) is likely too high, above the black area that indicates where the ribbon is detected (2).  
2. Calibrate the sensors or load printer defaults. See Calibrate Media and Ribbon Sensor Sensitivity on page 85 or LOAD DEFAULTS on page 69. | |
The RIBBON light is on; the ERROR light flashes. The ERROR light flashes.

Ribbon is loaded, but the printer is set for direct thermal mode. Ribbon is not required with direct thermal media. If you are using direct thermal media, remove the ribbon. This error message will not affect printing. If you are using thermal transfer media, which requires ribbon, set the printer for Thermal Transfer mode. See Select Print Method on page 77.

The printer stops; the ERROR light flashes.

The media is not loaded or is loaded incorrectly. Load media correctly. See Load Media on page 43.

Misaligned media sensor. Check position of the media sensor.

The printer is set for noncontinuous media, but continuous media is loaded. Install proper media type, or reset printer for current media type and perform calibration.

The printhead is not fully closed. Close printhead completely.

The head open sensor is not working properly. Call a service technician.

The printhead has a faulty thermistor. Call a service technician.

Caution • An improperly connected printhead data or power cable can cause these error messages. The printhead may be hot enough to cause severe burns. Allow the printhead to cool.

The printhead data cable is not properly connected.

Caution • Turn off (O) the printer before performing this procedure. Failure to do so can damage the printhead.
1. Turn off (O) the printer.
2. Disconnect and reconnect the data cable to the printhead.
3. Ensure that the cable connector is fully inserted into the printhead connector.
4. Turn on (I) the printer.

The printhead has a faulty thermistor.

Call a service technician.

</table>
| **The RFID-enabled printer voids every label.** | You are using an incorrect programming position, particularly if the tags being used are within printer specifications. | Do one or more of the following as necessary:  
• Check the RFID programming position, or the program position setting in your label designer software. If the position is incorrect, change the setting.  
• Restore the RFID programming position back to the default value. |
| | You are sending RFID ZPL or SGD commands that are incorrect. | Check your label formats. |
| **Low yields. Too many RFID tags per roll are voided.** | The RFID labels are not within specifications for the printer, which means that the transponder is not in an area that can be programmed consistently. | Make sure that the labels meet transponder placement specifications for your printer. See [http://www.zebra.com/transponders](http://www.zebra.com/transponders) for transponder placement information.  
Refer to the *RFID Programming Guide* or contact an authorized Zebra RFID reseller for more information. |
| | Some RFID tags are more sensitive than others and may require special printer settings. | 1. Verify that the printer is set for the correct write power. See [http://www.zebra.com/transponders](http://www.zebra.com/transponders) for the recommended power setting for each tag type.  
2. If necessary, run the ^HR command to manually calibrate the transponder position.  
3. If the problem persists, consider using a different tag type.  
Refer to the *RFID Programming Guide* or contact an authorized Zebra RFID reseller for more information. |
| | Incorrect read and write power levels for the RFID tag type. | Change the RFID read and write power levels.  
Refer to the *RFID Programming Guide* for instructions. |
| | Radio frequency (RF) interference from another RF source. | Do one or more of the following as necessary:  
• Move the printer away from fixed RFID readers.  
• Make sure that the media door is closed at all times during RFID programming. |
| | The printer is using outdated printer firmware and reader firmware versions. | Go to [http://www.zebra.com/firmware](http://www.zebra.com/firmware) for updated firmware. |

Printer Diagnostics

Self tests and other diagnostics provide specific information about the condition of the printer. The self tests produce sample printouts and provide specific information that helps determine the operating conditions for the printer. The most commonly used are the Power-On and the CANCEL self tests.

**Important** • Use full-width media when performing self tests. If your media is not wide enough, the test labels may print on the platen roller. To prevent this from happening, check the print width using *Set Print Width on page 77*, and ensure that the width is correct for the media that you are using.

Each self test is enabled by pressing a specific control panel key or combination of keys while turning on (I) the printer power. Keep the key(s) pressed until the first indicator light turns off. The selected self test automatically starts at the end of the Power-On Self Test.

**Note** •
- When performing these self tests, do not send data to the printer from the host.
- If your media is shorter than the label to be printed, the test label continues on the next label.
- When canceling a self test prior to its actual completion, always reset the printer by turning it off (O) and then on (I).

**Power-On Self Test**

A Power-On Self Test (POST) is performed each time the printer is turned on (I). During this test, the control panel lights (LEDs) turn on and off to ensure proper operation. At the end of this self test, only the POWER LED remains lit. When the Power-On Self Test is complete, the media is advanced to the proper position.

**To initiate the Power-On Self Test, complete these steps:**

1. Turn on (I) the printer.

   The POWER LED illuminates. The other control panel LEDs and the LCD monitor the progress and indicate the results of the individual tests. All messages during the POST display in English; however, if the test fails, the resulting messages cycle through the international languages as well.
**CANCEL Self Test**

The CANCEL self test prints a configuration label (Figure 18).

**To perform the CANCEL Self Test, complete these steps:**

1. Turn off (O) the printer.

2. Press and hold CANCEL while turning on (I) the printer. Hold CANCEL until the first control panel light turns off.

A printer configuration label prints (Figure 18).

---

**Figure 18 • Sample Configuration Label**
PAUSE Self Test

This self test can be used to provide the test labels required when making adjustments to the printer’s mechanical assemblies or to determine if any printhead elements are not working. Figure 19 shows a sample printout.

To perform a PAUSE self test, complete these steps:

1. Turn off (O) the printer.

2. Press and hold PAUSE while turning on (I) the printer. Hold PAUSE until the first control panel light turns off.
   - The initial self test prints 15 labels at the printer’s slowest speed, and then automatically pauses the printer. Each time PAUSE is pressed, an additional 15 labels print. Figure 19 shows a sample of the labels.

   Figure 19 • PAUSE Test Label

   • While the printer is paused, pressing CANCEL alters the self test. Each time PAUSE is pressed, 15 labels print at 6 in. (152 mm) per second.
   • While the printer is paused, pressing CANCEL again alters the self test a second time. Each time PAUSE is pressed, 50 labels print at the printer’s slowest speed.
   • While the printer is paused, pressing CANCEL again alters the self test a third time. Each time PAUSE is pressed, 50 labels print at 6 in. (152 mm) per second.
   • While the printer is paused, pressing CANCEL again alters the self test a fourth time. Each time PAUSE is pressed, 15 labels print at the printer’s maximum speed.
   • To exit this self test at any time, press and hold CANCEL.
FEED Self Test

Different types of media may require different darkness settings. This section contains a simple but effective method for determining the ideal darkness for printing bar codes that are within specifications.

During the FEED self test, labels are printed at different darkness settings at two different print speeds. The relative darkness and the print speed are printed on each label. The bar codes on these labels may be ANSI-graded to check print quality.

The darkness value starts at three settings lower than the printer’s current darkness value (relative darkness of –3) and increase until the darkness is three settings higher than the current darkness value (relative darkness of +3).

Depending on the dot density of the printhead, seven labels are printed at each of the following speeds:

- 203 dpi printers: 2 ips, 6 ips, and 10 ips
- 300 dpi printers: 2 ips, 6 ips, 8 ips
- 600 dpi printers: 2 ips, 4 ips

To perform a FEED self test, complete these steps:

1. Print a configuration label to show the printer’s current settings.
2. Turn off (O) the printer.
3. Press and hold FEED while turning on (I) the printer. Hold FEED until the first control panel light turns off.

The printer prints a series of labels (Figure 20) at various speeds and at darkness settings higher and lower than the darkness value shown on the configuration label.

Figure 20 • FEED Test Label
4. See Figure 21 and Table 21. Inspect the test labels and determine which one has the best print quality for your application. If you have a bar code verifier, use it to measure bars/spaces and calculate the print contrast. If you do not have a bar code verifier, use your eyes or the system scanner to choose the optimal darkness setting based on the labels printed in this self test.

**Figure 21 • Bar Code Darkness Comparison**

**Table 21 • Judging Bar Code Quality**

<table>
<thead>
<tr>
<th>Print Quality</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Too dark</strong></td>
<td>Labels that are too dark are fairly obvious. They may be readable but not “in-spec.”</td>
</tr>
<tr>
<td></td>
<td>• The normal bar code bars increase in size.</td>
</tr>
<tr>
<td></td>
<td>• The openings in small alphanumeric characters may fill in with ink.</td>
</tr>
<tr>
<td></td>
<td>• Rotated bar code bars and spaces run together.</td>
</tr>
<tr>
<td><strong>Slightly dark</strong></td>
<td>Slightly dark labels are not as obvious.</td>
</tr>
<tr>
<td></td>
<td>• The normal bar code will be “in-spec.”</td>
</tr>
<tr>
<td></td>
<td>• Small character alpha numerics will be bold and could be slightly filled in.</td>
</tr>
<tr>
<td></td>
<td>• The rotated bar code spaces are small when compared to the “in-spec” code, possibly making the code unreadable.</td>
</tr>
</tbody>
</table>
Table 21 • Judging Bar Code Quality (Continued)

<table>
<thead>
<tr>
<th>Print Quality</th>
<th>Description</th>
</tr>
</thead>
</table>
| “In-spec”     | The “in-spec” bar code can only be confirmed by a verifier, but it should exhibit some visible characteristics.  
- The normal bar code will have complete, even bars and clear, distinct spaces.  
- The rotated bar code will have complete, even bars and clear, distinct spaces. Although it may not look as good as a slightly dark bar code, the bar code will be “in-spec.”  
- In both normal and rotated styles, small alphanumeric characters look complete. |
| Slightly light | Slightly light labels are, in some cases, preferred to slightly dark ones for “in-spec” bar codes.  
- Both normal and rotated bar codes will be in spec, but small alphanumeric characters may not be complete. |
| Too light     | Labels that are too light are obvious.  
- Both normal and rotated bar codes have incomplete bars and spaces.  
- Small alphanumeric characters are unreadable. |

5. Note the relative darkness value and the print speed printed on the best test label.

6. Add or subtract the relative darkness value from the darkness value specified on the configuration label. The resulting numeric value is the best darkness value for that specific label/ribbon combination and print speed.

7. If necessary, change the darkness value to the darkness value on the best test label. See Adjust Print Darkness on page 73.

8. If necessary, change the print speed to the same speed as on the best test label. See Adjust Print Speed on page 74.
FEED and PAUSE Self Test

Performing this self test temporarily resets the printer configuration to the factory default values. These values are active only until power is turned off unless you save them permanently in memory. If the factory default values are permanently saved, a media calibration procedure must be performed.

To perform a FEED and PAUSE self test, complete these steps:

1. Turn off (O) the printer.

2. Press and hold FEED and PAUSE while turning on (I) the printer.

3. Hold FEED and PAUSE until the first control panel light turns off.

   The printer configuration is temporarily reset to the factory default values. No labels print at the end of this test.
Communications Diagnostics Test

The communication diagnostics test is a troubleshooting tool for checking the interconnection between the printer and the host computer.

When the printer is in diagnostics mode, it prints all data received from the host computer as straight ASCII characters with the hex values below the ASCII text. The printer prints all characters received, including control codes such as CR (carriage return). Figure 22 shows a typical test label from this test.

Note • The test label prints upside-down.

Figure 22 • Communications Diagnostics Test Label

To use communications diagnostics mode, complete these steps:

1. Set the print width equal to or less than the label width being used for the test. See Set Print Width on page 77 for more information.

2. Set the printer to DIAGNOSTICS. For instructions, see Set Communications Mode on page 89.

   The printer enters diagnostics mode and prints any data received from the host computer on a test label.

3. Check the test label for error codes. For any errors, check that your communication parameters are correct.

   Errors show on the test label as follows:
   • FE indicates a framing error.
   • OE indicates an overrun error.
   • PE indicates a parity error.
   • NE indicates noise.

4. Turn the printer off (O) and then back on (I) to exit this self test and return to normal operation.
Sensor Profile

Use the sensor profile label to troubleshoot the following types of problems:

• If the media sensor experiences difficulty in determining gaps (web) between labels.
• If the media sensor incorrectly identifies preprinted areas on a label as gaps (web).
• If the ribbon sensor cannot detect ribbon.

For instructions on printing a sensor profile, see Print Sensor Profile on page 84. If the sensitivity of the sensors must be adjusted, perform Calibrate Media and Ribbon Sensor Sensitivity on page 85.

Ribbon Sensor Profile (Figure 23) The bars (1) on the sensor profile indicate the ribbon sensor readings. The ribbon sensor threshold setting is indicated by the word RIBBON (2). If the ribbon readings are below the threshold value, the printer does not acknowledge that ribbon is loaded.

Media Sensor Profile (Figure 24) The media sensor readings are shown as bars and flat areas on the sensor profile. The bars (1) indicate gaps between labels (the web), and the low areas (2) indicate where labels are located. If you compare the sensor profile printout to a blank length of your media, the bars should be the same distance apart as the gaps on the media. If the distances are not the same, the printer may be having difficulty determining where the gaps are located.

The media sensor threshold settings are shown by the words MEDIA (3) for the media threshold and WEB (4) for the web threshold. Use the numbers to the left of the sensor readings to compare the numeric readings to the sensor settings.
This section provides the features of and specifications for the printer.

Ribbon Specifications

Ribbon can be wound with the coated side on the inside or outside. The ribbon used must match the Thermal Transfer option installed. The standard Thermal Transfer option (black ribbon spindle) uses ribbon coated on the outside, and the alternate Thermal Transfer option (gray ribbon spindle) uses ribbon coated on the inside. For more information, see Ribbon Overview on page 36.

</tbody>
</table>

* The narrowest width tested and approved for this printer is 2 in. (51 mm). You may be able to use narrower ribbon, as long as the ribbon is wider than the media being used. To use a ribbon narrower than 2 in. (51 mm), test the ribbon’s performance with your media to assure that you get the desired results.
