Declaration of Conformity

We have determined that the Zebra printers identified as the

**ZT410 and ZT420**

manufactured by:

**Zebra Technologies Corporation**
3 Overlook Point
Lincolnshire, Illinois 60069 U.S.A.

Have been shown to comply with the applicable technical standards of the FCC

**For Home, Office, Commercial, and Industrial use**

If no unauthorized change is made in the equipment, and if the equipment is properly maintained and operated.
Compliance Information

FCC Compliance Statement

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

1. This device may not cause harmful interference, and
2. This device must accept any interference received, including interference that may cause undesired operation.

Note • This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:
   • Reorient or relocate the receiving antenna.
   • Increase the separation between the equipment and receiver.
   • Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
   • Consult the dealer or an experienced radio/TV technician for help.

FCC Radiation Exposure Statement (for printers with RFID encoders)

This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with minimum distance 20cm between the radiator and your body.

This transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.

Canadian DOC Compliance Statement

This Class B digital apparatus complies with Canadian ICES-003.

Cet appareil numérique de la classe B est conforme à la norme NMB-003 du Canada.

Printer Options

The available printer options are shown in Figure 1. For information about the print modes that can be used with the printer options, see Select a Print Mode on page 26.

Figure 1 • Printer Options

<table>

Communication Interfaces

The communication interface connectors are shown in Figure 2. A ZebraNet wireless print server option may also be present on your printer. You may send label formats to the printer through any communication interface that is available on your printer.

- For detailed information about the types of connections available, see Communication Interface Specifications on page 217.
- For instructions on when and how to connect your computer to one or more of these communication interfaces, see Install the Printer Driver and Connect the Printer to the Computer on page 60.

Figure 2 • Location of Communication Interfaces
Data Cables

You must supply all data cables for your application. The use of cable strain relief clamps is recommended.

Ethernet cables do not require shielding, but all other data cables must be fully shielded and fitted with metal or metalized connector shells. Unshielded data cables may increase radiated emissions above the regulated limits.

To minimize electrical noise pickup in the cable:

- Keep data cables as short as possible.
- Do not bundle the data cables tightly with the power cords.
- Do not tie the data cables to power wire conduits.
Printer Components

Note • The components inside your printer are color-coded.

• The touch points that you will need to handle are colored gold inside the printers and are highlighted in gold in the illustrations in this manual.
• The components associated with the ribbon system are made of black plastic, while the components associated with media are made of gray plastic. Those components and others are highlighted in light blue in the illustrations in this manual.

Figure 3 shows the components inside the media compartment of a standard printer. Depending on the printer model and the installed options, your printer may look slightly different. The components that are labeled are mentioned in procedures throughout this manual.

6 The display shows the printer’s current status and allows the user to navigate the menu system. An optional color display is available for purchase. Contact your authorized Zebra reseller for more information.

7 RIGHT SELECT button These buttons execute the commands shown directly above them in the display.

8 LEFT SELECT button

9 The UP ARROW button changes the parameter values. Common uses are to increase a value or to scroll through choices.

10 The OK button selects or confirms what is shown on the display.

11 The LEFT ARROW button, which is active only in the menu system, navigates to the left.

12 The RIGHT ARROW button, which is active only in the menu system, navigates to the right.

13 The DOWN ARROW button changes the parameter values. Common uses are to decrease a value or to scroll through choices.

14 The PAUSE button starts or stops printer operation when pressed.

15 The FEED button forces the printer to feed one blank label each time the button is pressed.

16 The CANCEL button cancels label formats when the printer is paused.
   - Press once to cancel the next label format.
   - Press and hold for 2 seconds to cancel all label formats.
Navigating through Screens in the Display

Table 1 shows the following:

- the options available for navigating through the screens in the control panel display
- how to select or modify things shown on the display

Table 1 • Navigation

Idle Display

At the Idle Display (Figure 5 on page 17), press LEFT SELECT to go to the printer’s Home menu (Figure 6 on page 17).

Home Menu

To move from icon to icon in the Home menu, press any of the ARROW buttons.
When an icon is selected, its colors are reversed to highlight it.

Press LEFT SELECT to exit the Home menu and return to the Idle Display. The printer automatically returns to the Idle Display after 15 seconds of inactivity in the Home menu.
Table 1 • Navigation (Continued)

### User Menus

Press LEFT SELECT to return to the Home menu. The printer automatically returns to the Home menu after 15 seconds of inactivity in a user menu.

▲ and ▼ indicate that a value can be changed. Any changes that you make are saved immediately. Press the UP ARROW or DOWN ARROW to scroll through accepted values.

To scroll through the items in a user menu, press the LEFT ARROW or RIGHT ARROW.

A word in the bottom-right corner of the display indicates an available action. Press OK or press RIGHT SELECT to perform the action shown.

### Menu Shortcuts

To go to the next user menu from a menu shortcut, press OK or press RIGHT SELECT to select GO.

To continue to navigate in the same user menu, press the LEFT ARROW or RIGHT ARROW.
Idle Display, Home Menu, and User Menus

The printer’s control panel includes a display, where you can view the printer’s status or change its operating parameters. In this section, you will learn how to navigate through the printer’s menu system and change values for menu items.

**Idle Display** After the printer completes the power-up sequence, it moves to the Idle Display (Figure 5). The printer cycles through its IP address and information configured by the user.

![Figure 5 • Idle Display](image)

<p>| | |</p>
<table>
<thead>
<tr>

<td>Home menu shortcut</td>
</tr>
</tbody>
</table>

**Home Menu** Use the Home menu (Figure 6) to access the printer’s operating parameters through the eight user menus (Figure 15 on page 99).

![Figure 6 • Home Menu—Standard (Left) and Optional Color (Right)](image)

Exit and return to the Idle Display (Figure 5).
Types of Media

*Important* • Zebra strongly recommends the use of Zebra-brand supplies for continuous high-quality printing. A wide range of paper, polypropylene, polyester, and vinyl stock has been specifically engineered to enhance the printing capabilities of the printer and to prevent premature printhead wear. To purchase supplies, go to [http://www.zebra.com/supplies](http://www.zebra.com/supplies).

Your printer can use various types of media:

- **Standard media**—Most standard media uses an adhesive backing that sticks individual labels or a continuous length of labels to a liner. Standard media can come on rolls or in a fanfold stack (Table 2).

- **Tag stock**—Tags are usually made from a heavy paper. Tag stock does not have adhesive or a liner, and it is typically perforated between tags. Tag stock can come on rolls or in a fanfold stack (Table 2).

- **Radio frequency identification (RFID) “smart” media**—RFID media can be used in a printer that is equipped with an RFID reader/encoder. RFID labels are made from the same materials and adhesives as non-RFID labels. Each label has an RFID transponder (sometimes called an “inlay”), made of a chip and an antenna, embedded between the label and the liner. The shape of the transponder varies by manufacturer and is visible through the label. All “smart” labels have memory that can be read, and many have memory that can be encoded.

*Important* • Transponder placement within a label depends on the transponder type and the printer model. Make sure that you are using the correct “smart” media for your printer. For more information, refer to the [RFID Programming Guide 3](http://www.zebra.com/manuals). A copy of the manual is available at [http://www.zebra.com/manuals](http://www.zebra.com/manuals) or on the user CD that came with your printer. For transponder placement details, go to [http://www.zebra.com/transponders](http://www.zebra.com/transponders).
## Table 2 • Roll and Fanfold Media

<table>
<thead>
<tr>
<th>Media Type</th>
<th>How It Looks</th>
<th>Description</th>
</tr>
</thead>
</table>
| Non-Continuous Roll Media | ![Roll Media Image] | Roll media is wound on a core that can be 1 in. to 3 in. (25 to 76 mm) in diameter. Individual labels or tags are separated by one or more of the following methods:  
  • *Web media* separates labels by gaps, holes, or notches.  
  • *Black mark media* uses pre-printed black marks on the back side of the media to indicate label separations.  
  • *Perforated media* has perforations that allow the labels or tags to be separated from each other easily. The media may also have black marks or other separations between labels or tags. |
| Non-Continuous Fanfold Media | ![Fanfold Media Image] | Fanfold media is folded in a zigzag pattern. Fanfold media can have the same label separations as non-continuous roll media. The separations would fall on or near the folds. |
| Continuous Roll Media    | ![Continuous Roll Media Image] | Roll media is wound on a core that can be 1 in. to 3 in. (25 to 76 mm) in diameter.  
  Continuous roll media does not have gaps, holes, notches, or black marks to indicate label separations. This allows the image to be printed anywhere on the label. Sometimes a cutter is used to cut apart individual labels. |
Ribbon Overview

Ribbon is a thin film that is coated on one side with wax, resin, or wax resin, which is transferred to the media during the thermal transfer process. The media determines whether you need to use ribbon and how wide the ribbon must be.

When ribbon is used, it must be as wide as or wider than the media being used. If the ribbon is narrower than the media, areas of the printhead are unprotected and subject to premature wear.

When to Use Ribbon

Thermal transfer media requires ribbon for printing while direct thermal media does not. To determine if ribbon must be used with a particular media, perform a media scratch test.

To perform a media scratch test, complete these steps:

1. Scratch the print surface of the media rapidly with your fingernail.

2. Did a black mark appear on the media?

<table>
<thead>
<tr>
<th>If a black mark...</th>
<th>Then the media is...</th>
</tr>
</thead>
<tbody>
<tr>
<td>Does not appear on the media</td>
<td>Thermal transfer. A ribbon is required.</td>
</tr>
<tr>
<td>Appears on the media</td>
<td>Direct thermal. No ribbon is required.</td>
</tr>
</tbody>
</table>

Coated Side of Ribbon

Ribbon can be wound with the coated side on the inside or outside (Figure 7). If you are unsure which side of a particular roll of ribbon is coated, perform an adhesive test or a ribbon scratch test to determine which side is coated.

Figure 7 • Ribbon Coated on Outside or Inside

Outside

Inside
Adhesive Test

If you have labels available, perform the adhesive test to determine which side of a ribbon is coated. This method works well for ribbon that is already installed.

To perform an adhesive test, complete these steps:

1. Peel a label from its liner.
2. Press a corner of the sticky side of the label to the outer surface of the roll of ribbon.
3. Peel the label off of the ribbon.
4. Observe the results. Did flakes or particles of ink from the ribbon adhere to the label?

<table>
<thead>
<tr>
<th>If ink from the ribbon...</th>
<th>Then...</th>
</tr>
</thead>
<tbody>
<tr>
<td>Adhered to the label</td>
<td>The ribbon is coated on the outside and can be used in the standard ZT410 printer and in the ZT420 printer.</td>
</tr>
<tr>
<td>Did not adhere to the label</td>
<td>The ribbon is coated on the inside and cannot be used with a standard ZT410 printer or with a ZT420 printer. An optional ribbon supply spindle is available for the ZT410 printer to allow use of this type of ribbon. Contact your authorized Zebra reseller for ordering information.</td>
</tr>
</tbody>
</table>

To verify this result, repeat the test on the other surface of the roll of ribbon.

Ribbon Scratch Test

Perform the ribbon scratch test when labels are unavailable.

To perform a ribbon scratch test, complete these steps:

1. Unroll a short length of ribbon.
2. Place the unrolled section of ribbon on a piece of paper with the outer surface of the ribbon in contact with the paper.
3. Scratch the inner surface of the unrolled ribbon with your fingernail.
4. Lift the ribbon from the paper.
5. Observe the results. Did the ribbon leave a mark on the paper?

<table>
<thead>
<tr>
<th>If the ribbon...</th>
<th>Then...</th>
</tr>
</thead>
<tbody>
<tr>
<td>Left a mark on the paper</td>
<td>The ribbon is coated on the outside and <strong>can</strong> be used in the standard ZT410 printer and in the ZT420 printer.</td>
</tr>
<tr>
<td>Did not leave a mark on the paper</td>
<td>The ribbon is coated on the inside and <strong>cannot</strong> be used with a standard ZT410 printer or with a ZT420 printer. An optional ribbon supply spindle is available for the ZT410 printer to allow use of this type of ribbon. Contact your authorized Zebra reseller for ordering information. To verify this result, repeat the test on the other surface of the roll of ribbon.</td>
</tr>
</tbody>
</table>

Handling the Printer

This section describes how to handle your printer.

Unpack and Inspect the Printer

When you receive the printer, immediately unpack it and inspect for shipping damage.

- Save all packing materials.
- Check all exterior surfaces for damage.
- Raise the media door, and inspect the media compartment for damage to components.

If you discover shipping damage upon inspection:
- Immediately notify the shipping company and file a damage report.
- Keep all packaging material for shipping company inspection.
- Notify your authorized Zebra reseller

Important • Zebra Technologies is not responsible for any damage incurred during the shipment of the equipment and will not repair this damage under warranty.

Store the Printer

If you are not placing the printer into immediate operation, repackage it using the original packing materials. You may store the printer under the following conditions:

- Temperature: –40°F to 140°F (–40° to 60°C)
- Relative humidity: 5% to 85% non-condensing

Ship the Printer

If you must ship the printer:

- Turn off (O) the printer, and disconnect all cables.
- Remove any media, ribbon, or loose objects from the printer interior.
- Close the printhead.
- Carefully pack the printer into the original container or a suitable alternate container to avoid damage during transit. A shipping container can be purchased from Zebra if the original packaging has been lost or destroyed.
Select a Location for the Printer

Select a location for the printer that meets these conditions:

- **Surface**: The surface where the printer will be located must be solid, level, and of sufficient size and strength to hold the printer.

- **Space**: The area where the printer will be located must include enough space for ventilation and for accessing the printer components and connectors. To allow for proper ventilation and cooling, leave open space on all sides of the printer.

- **Power**: The printer should be within a short distance of an appropriate power outlet that is easily accessible.

- **Data communication interfaces**: The printer must be within range of your WLAN radio (if applicable) or within an acceptable range for other connectors to reach your data source (usually a computer). For more information on maximum cable lengths and configuration, see General Specifications on page 216.

- **Operating conditions**: Your printer is designed to function in a wide range of environmental and electrical conditions, including a warehouse or factory floor. Table 3 shows the temperature and relative humidity requirements for the printer when it is operating.

Table 3 • Operating Temperature and Humidity

<table>
<thead>
<tr>
<th>Mode</th>
<th>Temperature</th>
<th>Relative Humidity</th>
</tr>
</thead>
<tbody>
<tr>
<td>Thermal Transfer</td>
<td>40° to 104°F (5° to 40°C)</td>
<td>20 to 85% non-condensing</td>
</tr>
<tr>
<td>Direct Thermal</td>
<td>32° to 104°F (0° to 40°C)</td>
<td></td>
</tr>
</tbody>
</table>

Caution • Do not place any padding or cushioning material behind or under the printer because this restricts air flow and could cause the printer to overheat.
Select a Print Mode

Use a print mode that matches the media being used and the printer options available (Table 4). The media path is the same for roll and fanfold media. To set the printer to use an available print mode, see Print Mode on page 104.

Table 4 • Print Modes and Printer Options

![Rewind mode diagram](image-url)
Load the Media

Use the instructions in this section for loading roll or fanfold media in any print mode.

**Caution** • While performing any tasks near an open printhead, remove all rings, watches, hanging necklaces, identification badges, or other metallic objects that could touch the printhead. You are not required to turn off the printer power when working near an open printhead, but Zebra recommends it as a precaution. If you turn off the power, you will lose all temporary settings, such as label formats, and you must reload them before you resume printing.

**Note** • In some of the drawings that follow, the printer is shown without a ribbon system to give you a better view of the components involved in media loading.

**To load media, complete these steps:**

1. Raise the media door.
2. Insert media into the printer. Follow the instructions for roll or fanfold media, as appropriate.

**Roll Media**

2-a. Remove and discard any tags or labels that are dirty or that are held by adhesives or tape.

2-b. Pull out the media supply guide as far as it goes.

2-c. Place the roll of media on the media supply hanger. Push the roll back as far as it will go.

**Fanfold Media**

Pull out the media supply guide as far as it goes.

Feed the media through the rear or bottom access slot.

Drape the media over the media supply hanger.
2-d. Slide in the media supply guide, until it touches the edge of the roll.

2-e. Continue with step 3.

Slide in the media supply guide, until it touches the edge of the media.

Continue with step 3 and the remaining steps as shown for roll media.
3.  **Caution** • The printhead may be hot and could cause severe burns. Allow the printhead to cool.

Open the printhead assembly by rotating the printhead-open lever.

4.  Slide the media guide all the way out.
5. From the media hanger (1), feed the media under the dancer assembly (2), through the media sensor (3), and under the printhead assembly (4). Slide the media back until it touches the inside back wall of the media sensor.
6. In which print mode will your printer be operating? (For more information on print modes, see *Select a Print Mode on page 26.*

<table>

</tr>
</tbody>
</table>
| Thermal Transfer media (ribbon needed) | a. If you have not already done so, load ribbon in the printer. See Load the Ribbon on page 56.  
b. Continue with step 4.                    |
4. Close the media door.

5. Set the printer to Tear-Off mode (for more information, see Print Mode on page 104).

6. Press PAUSE to exit pause mode and enable printing.
   The printer may perform a label calibration or feed a label, depending on your settings.

7. For best results, calibrate the printer. See Calibrate the Ribbon and Media Sensors on page 143.

8. If desired, perform the CANCEL Self Test on page 192 to verify that your printer is able to print.
   Media loading in Tear-Off mode is complete.
Final Steps for Peel-Off Mode (with or without Liner Take-Up)

1. Push down the peel-off mechanism release lever to open the peel assembly.
2. Extend the media approximately 18 in. (500 mm) out of the printer.

3. Remove the exposed labels so that only the liner remains.
4. Feed the liner behind the peel assembly. Make sure that the end of the liner falls outside of the printer.
5. Complete this step only if you want to use Peel-Off mode with Liner Take-Up. Your printer must have the Liner Take-Up option or the Rewind option installed. Follow the instructions for your printer option. If you are not using Liner Take-Up, continue with step 6.

5-a. Thread the liner into the slot below the peel assembly.

Rewind Option

5-b. Feed the liner under the media alignment roller (1).

Liner Take-Up Option

Slide the liner into the slot in the liner take-up spindle (1).
Rewind Option
(Continued)

5-c. Loosen the thumbscrew on the rewind media guide.

5-d. Slide the rewind media guide all the way out, and then fold it down.

Liner Take-Up Option
(Continued)

Push the liner back until it touches the back plate of the liner take-up spindle assembly.

Wrap the liner around the liner take-up spindle and turn the spindle counterclockwise to tighten the liner.

For the Liner Take-Up option, loading of the liner is complete. Continue with step 6.
Rewind Option (Continued)

5-e. Slide an empty core onto the rewind spindle.

5-f. Wrap the liner around the core as shown, and then turn the rewind spindle to tighten the media. Ensure that the edge of the media is flush against the backplate of the rewind spindle.
Rewind Option  
(Continued)

5-g. Fold up the rewind media guide, and then slide it in until it touches the liner.

5-h. Tighten the thumbscrew on the rewind media guide.

5-i. Loading of the liner is complete. Continue with step 6.
6. **Caution** • Use the peel release lever and your right hand to close the peel assembly. Do not use your left hand to assist in closing. The top edge of the peel roller/assembly could pinch your fingers.

Close the peel assembly using the peel-off mechanism release lever.

7. Slide in the media guide until it just touches the edge of the media.

8. Rotate the printhead-open lever downward until it locks the printhead in place.
9. Does the media that you are using require ribbon for printing? If you are not sure, see *When to Use Ribbon* on page 20.

<table>

6. Set the printer to Cutter mode (for more information, see Print Mode on page 104).

7. Press PAUSE to exit pause mode and enable printing.
   The printer may perform a label calibration or feed a label, depending on your settings.

8. For best results, calibrate the printer. See Calibrate the Ribbon and Media Sensors on page 143.

9. If desired, perform the CANCEL Self Test on page 192 to verify that your printer is able to print.
   Media loading in Cutter mode is complete.
Load the Ribbon

**Note** • This section applies only to printers that have the Thermal Transfer option installed.

Ribbon is used only with thermal transfer labels. For direct thermal labels, do not load ribbon in the printer. To determine if ribbon must be used with a particular media, see *When to Use Ribbon* on page 20.

**Caution** • While performing any tasks near an open printhead, remove all rings, watches, hanging necklaces, identification badges, or other metallic objects that could touch the printhead. You are not required to turn off the printer power when working near an open printhead, but Zebra recommends it as a precaution. If you turn off the power, you will lose all temporary settings, such as label formats, and you must reload them before you resume printing.

**Important** • Use ribbon that is wider than the media to protect the printhead from wear. Ribbon must be coated on the outside.

**To load ribbon, complete these steps:**

1. Raise the media door.
2. **Caution** • The printhead may be hot and could cause severe burns. Allow the printhead to cool.

Open the printhead assembly by rotating the printhead-open lever.

3. Place the roll of ribbon on the ribbon supply spindle with the loose end of the ribbon unrolling as shown. Push the roll back as far as it will go.
4. Bring the ribbon under the printhead assembly and around its left side, as shown.

5. With the ribbon tracking as far back as it can under the printhead assembly, wrap the ribbon around the ribbon take-up spindle. Rotate the spindle several turns in the direction shown to tighten and align the ribbon.
6. Is media already loaded in the printer?

</table>
| Yes   | a. Rotate the printhead-open lever downward until it locks the printhead in place.  

b. Close the media door. 

c. If necessary, press PAUSE to enable printing.
Install the Printer Driver and Connect the Printer to the Computer

In this section, you are shown how to use the Zebra Setup Utilities program to prepare a computer running Microsoft Windows® for the printer driver before connecting the printer to any of the computer’s data communication interfaces. Use this section for directions to install this program if you have not already done so. You may connect your printer to your computer using any of the connections that you have available.

Important • You must install the Zebra Setup Utilities program before connecting the printer to your computer. Your computer will not install the correct printer drivers if you connect the printer to it without the Zebra Setup Utilities program.

Install Zebra Setup Utilities

Follow the directions in this section if you do not have Zebra Setup Utilities installed on your computer or if you want to update an existing version of the program. You do not need to uninstall any older versions or any Zebra printer drivers to do so.

To install the Zebra Setup Utilities program, complete these steps:

Download the Zebra Setup Utilities Installer

   The Zebra Setup Utilities page appears.

2. On the DOWNLOADS tab, click Download under the ZEBRA SETUP UTILITIES option.

You are prompted to read and accept the End User License Agreement (EULA).
3. If you agree with the terms of the EULA, click **ACCEPT AND BEGIN DOWNLOAD NOW**
Depending on your browser, you are given options to run or save the executable file.

![Dialog box for running or saving the executable file](image)

**Run the Zebra Setup Utilities Installer**

4. Save the program to your computer. (Optional if your browser gave you the option to run the program instead of saving it.)

5. Run the executable file. If your computer prompts you for permission to run the file, click the appropriate button to allow it to run.

What the computer displays next depends on whether Zebra Setup Utilities was already installed. Follow the instructions based on what your computer prompts you to do.

<table>
<thead>
<tr>

</tr>
</tbody>
</table>
8. Click Next.
   You are prompted to select where the files will be installed.

9. Change the destination folder, if necessary, and then click Next.
   You are prompted to select a location for program shortcuts.
10. Change the location, if desired, and then click Next.
    You are prompted to complete the InstallAware wizard.

![InstallAware Wizard](image1.png)

11. Skip to *Continuing with New or Updated Installations* on page 65.

**Updating Existing Installations of Zebra Setup Utilities**

12. Click Next.
    You are prompted to choose the features that you would like to install.

![Custom Setup](image2.png)
13. Click Next.

You are prompted to complete the InstallAware wizard.

Continuing with New or Updated Installations

14. Click Next.

Installation begins.
During installation, you are presented with information about drivers.

15. Read the information, and then check the box that says
    I have read the information above

16. Click Next.
    You are shown options that can take place when the wizard exits the installation.

17. Check the box that says “Run Zebra Setup Utilities now.”
18. Click Finish.

What the computer displays next depends on whether any Zebra printer drivers are already installed on your computer. Follow the instructions based on what your computer displays.

<table>

Connect a Computer to the Printer’s USB Port

Complete the steps in this section only after you have installed the Zebra Setup Utilities program. If necessary, complete the steps in Install Zebra Setup Utilities on page 60 before continuing.

**Important** • You must install the Zebra Setup Utilities program before connecting the printer to your computer. Your computer will not install the correct printer drivers if you connect the printer to it without the Zebra Setup Utilities program.

---

**Caution** • Ensure that the printer power is off (O) before connecting data communications cables. Connecting a data communications cable while the power is on (I) may damage the printer.

---

**To connect the printer to your computer by USB, complete these steps:**

**Running the System Prepare Wizard**

If you are at the Zebra Setup Utilities screen, you do not need to complete this section. Continue with Connecting the printer to a USB port on your computer on page 70.

The first time that you install the Zebra Setup Utilities program and printer drivers, you are prompted to follow the System Prepare Wizard.

**Figure 8 • System Prepare Wizard**

![System Prepare Wizard](image-url)
1. Click Next.
   The System Prepare Wizard prompts you to connect the printer to the USB port on your computer.

2. Click Finish.
   The Zebra Setup Utilities screen displays.

**Connecting the printer to a USB port on your computer**

Complete the steps in this section only after the System Prepare Wizard prompts you to do so or after you have opened the Zebra Setup Utilities program. If necessary, complete the steps in *Install Zebra Setup Utilities* on page 60 before continuing.

*Figure 9 • Zebra Setup Utilities Screen*
3. Connect the USB cord to the USB port on your printer.

4. Connect the other end of the USB cord to your computer.

5. Plug the female end of the A/C power cord into the A/C power connector on the back of the printer.

6. Plug the male end of the A/C power cord into an appropriate power outlet.
7. Turn on the printer.

As the printer boots up, your computer completes the driver installation and recognizes your printer.

The installation for the USB connection is complete.
Connect a Computer to the Printer’s Serial or Parallel Port

Complete the steps in this section only after you have installed the Zebra Setup Utilities program. If necessary, complete the steps in Install Zebra Setup Utilities on page 60 before continuing.

**Important** • You must install the Zebra Setup Utilities program before connecting the printer to your computer. Your computer will not install the correct printer drivers if you connect the printer to it without the Zebra Setup Utilities program.

---

**Caution** • Ensure that the printer power is off (O) before connecting data communications cables. Connecting a data communications cable while the power is on (I) may damage the printer.

---

To connect the printer to your computer by USB, complete these steps:

If you are at the Zebra Setup Utilities screen, you do not need to complete this section. Continue with Adding a Printer from the Zebra Setup Utilities Screen on page 76.

Running the System Prepare Wizard

The first time that you install the Zebra Setup Utilities program and printer drivers, you are prompted to follow the System Prepare Wizard.

---

**Figure 10 • System Prepare Wizard**
1. Select “Other computer ports (Parallel Port, Serial Port, TCP-IP Port, ...), and then click Next.
   The new printer wizard prompts you to begin the installation procedure.

2. Click Finish.
   The printer driver wizard displays.
3. Click Next.
   You are prompted to select an installation option.

4. Continue with step 6 on page 77.
Adding a Printer from the Zebra Setup Utilities Screen

5. On the Zebra Setup Utilities screen, click Install New Printer. You are prompted to select an installation option.
6. Click Install Printer.
   You are prompted to select a printer type.

![Printer Setup and Operation](image)

7. Select your printer model and resolution.
   The model and resolution are on a part number sticker on the printer, usually located below the media hanger. The information will be in the following format:

   **Part Number: XXXXxY – xxxxxxx**

   where
   
   - **XXXX** = the printer model
   - **Y** = the printer resolution (2 = 203 dpi, 3 = 300 dpi, 6 = 600 dpi)

   For example, in the part number **ZT420x3 – xxxxxxx**
   - **ZT420** indicates that the printer is a ZT420 model
   - **3** indicates that the printhead resolution is 300 dpi

8. Click Next.
   You are prompted for a printer name, the port to which the printer will be connected, and the language for the program.

![Printer Setup and Operation](image)

9. Change the printer name (if desired), and select the appropriate port and language.
10. Click Next.
   You are prompted to launch other setup wizards.

![Additional Install Options]

11. Check the desired options, and then click Finish.
   The printer driver is installed. If you are prompted that other programs might be affected, click Next.
Connecting the printer to a serial or parallel port on your computer

12. Connect the desired cord to the appropriate port on your printer.

13. Connect the other end of the cord to the appropriate port on your computer.

14. Plug the female end of the A/C power cord into the A/C power connector on the back of the printer.

15. Plug the male end of the A/C power cord into an appropriate power outlet.
16. Turn on (I) the printer.

The printer boots up.

**Configuring the printer (if necessary)**

17. If necessary, adjust the printer’s port settings to match those of your computer. For more information, see *Port Settings on page 138.*

*The installation for serial or parallel connections is complete.*
Connect to Your Network through the Printer’s Ethernet Port

If you wish to use a wired print server (Ethernet) connection, you may need to connect the printer to your computer using one of the other available connections. While the printer is connected via one of those connections, you would configure the printer to communicate with your Local Area Network (LAN) through the printer’s wired print server.

For additional information about Zebra print servers, refer to the ZebraNet Wired and Wireless Print Server User Guide. To download the latest version of this guide, go to http://www.zebra.com/zt400-info.

To connect the printer to your computer by a wired print server, complete these steps:

1. Install Zebra Setup Utilities as instructed in Install Zebra Setup Utilities on page 60.

2. Connect the printer to an Ethernet cable that is connected to your network.

The printer attempts to communicate with your network. If it is successful, it fills in your LAN’s gateway and subnet values and gets an IP address. The printer display will alternate between the printer’s firmware version and its IP address.

3. Check the display to see if an IP address was assigned to the printer. See IP Address on page 120 for additional ways to view the IP address.

<table>
<thead>
<tr>
<th>If the printer’s IP address is...</th>
<th>Then...</th>
</tr>
</thead>
<tbody>
<tr>
<td>0.0.0.0 or 000.000.000.000</td>
<td>Continue with Configuring the printer with your LAN information (if necessary) on page 82.</td>
</tr>
<tr>
<td>any other value</td>
<td>Continue with Adding a Printer from the Zebra Setup Utilities Screen on page 83.</td>
</tr>
</tbody>
</table>
Configuring the printer with your LAN information (if necessary)

If your printer connected to your network automatically, you do not need to complete this section. Continue with Adding a Printer from the Zebra Setup Utilities Screen on page 83.

4. Connect the printer to your computer using a USB, serial, or optional parallel port as instructed in Connect a Computer to the Printer’s USB Port on page 69 or Connect a Computer to the Printer’s Serial or Parallel Port on page 73.

5. Configure the following printer settings. You can change the values through the Zebra Setup Utilities (click Configure Printer Connectivity on the Zebra Setup Utilities screen) or by the ways listed at the following links. Contact your network administrator for the proper values for your network.
   • IP Protocol on page 123 (change the value from ALL to PERMANENT)
   • Gateway on page 122 (match the gateway value of your LAN)
   • Subnet Mask on page 121 (match the subnet value of your LAN)
   • IP Address on page 120 (assign a unique IP address to the printer)

6. After the print server settings have been configured, reset the network to apply the changes. See Reset Network on page 125.
Adding a Printer from the Zebra Setup Utilities Screen

7. If necessary, open the Zebra Setup Utilities program. The Zebra Setup Utilities screen displays.

![Zebra Setup Utilities Screen](image)

8. Click Install New Printer. The printer driver wizard displays.
9. Click Next.
   You are prompted to select an installation option.

![Printer Setup Options](image1.png)

10. Click Install Printer.
    You are prompted to select a printer type.

![Printer Setup Options](image2.png)

11. Select your printer model and resolution.
    The model and resolution are on a part number sticker on the printer, usually located below the media hanger. The information will be in the following format:

    **Part Number:** XXXXYY - xxxxxxx

    where

    - XXXX = the printer model
    - Y = the printer resolution (2 = 203 dpi, 3 = 300 dpi, 6 = 600 dpi)

    For example, in the part number **ZT420x3** - xxxxxxx
    - **ZT420** indicates that the printer is a ZT420 model
    - **3** indicates that the printhead resolution is 300 dpi
12. Click Next.
   You are notified that the printer is already installed.

13. Click Add new printer.
   You are prompted for a printer name, the port to which the printer will be connected, and
   the language for the printer display.

14. Click Add Port.
   The wizard prompts you for a name for the port and the IP address of your printer.

   **Note** • If you have other applications open, you may be prompted that the driver is
   locked by another process. You may click Next to continue or Exit to allow you to save
   your work before continuing with this installation.
15. Give the port a name that you can recognize when it appears in the list of available ports.

![Port Name Configuration](image)

16. Enter the printer’s IP address. This could be one that was assigned automatically or one that you specified manually in the previous section.

17. Click OK.

A printer driver is created with the port name that you assigned. The new printer port appears in the list of available ports.

![Printer Driver Configuration](image)

18. Click Next.

You are prompted to launch other setup wizards.
19. Check the desired options, and then click Finish.

The printer driver is installed. If you are prompted that other programs might be affected, click the appropriate option to continue.

The installation for wired (Ethernet) connections is complete.
Connect the Printer to Your Wireless Network

If you wish to use one of the printer’s optional wireless print servers, you must first connect the printer to your computer using one of the other available connections. While the printer is connected via one of those connections, you configure the printer to communicate with your Wireless Local Area Network (WLAN) through the wireless print server.

For additional information about Zebra print servers, refer to the ZebraNet Wired and Wireless Print Server User Guide. To download the latest version of this guide, go to http://www.zebra.com/zt400-info.

To connect the printer to your computer by an optional wireless print server, complete these steps:

1. Install Zebra Setup Utilities as instructed in Install Zebra Setup Utilities on page 60.

2. Connect the printer to your computer using a USB, serial, or optional parallel port as instructed in Connect a Computer to the Printer’s USB Port on page 69 or Connect a Computer to the Printer’s Serial or Parallel Port on page 73.

3. Configure the following printer settings for the wireless print server. You can change the values through the Zebra Setup Utilities (click Configure Printer Connectivity on the Zebra Setup Utilities screen) or by the ways listed at the following links. Contact your network administrator for the proper values for your network.
   
   - **ESSID** on page 124 (change the value to match the ESSID of your wireless network)
   - **IP Protocol** on page 123 (change the value from ALL to PERMANENT)
   - **Gateway** on page 122 (match the gateway value of your WLAN)
   - **Subnet Mask** on page 121 (match the subnet value of your WLAN)
   - **IP Address** on page 120 (assign a unique IP address to the printer)

4. After the wireless print server settings have been configured, reset the network to apply the changes. See Reset Network on page 125.
Adding a Printer from the Zebra Setup Utilities Screen

5. If necessary, open the Zebra Setup Utilities program.
   The Zebra Setup Utilities screen displays.

![Figure 13 • Zebra Setup Utilities Screen]

6. Click Install New Printer.
   The printer driver wizard displays.
7. Click Next.
   You are prompted to select an installation option.

8. Click Install Printer.
   You are prompted to select a printer type.

9. Select your printer model and resolution.
   The model and resolution are on a part number sticker on the printer, usually located below the media hanger. The information will be in the following format:

   **Part Number: XXXXXxY - xxxxxxx**

   where

   - **XXXXX** = the printer model
   - **Y** = the printer resolution (2 = 203 dpi, 3 = 300 dpi, 6 = 600 dpi)

   For example, in the part number **ZT420x3 – xxxxxxx**
   - **ZT420** indicates that the printer is a ZT420 model
   - **3** indicates that the printhead resolution is 300 dpi
10. Click Next.
   You are notified that the printer is already installed.

11. Click Add new printer.
   You are prompted for a printer name, the port to which the printer will be connected, and the language for the printer display.

12. Click Add Port.
   The wizard prompts you for a name for the port and the IP address of your printer.

   **Note** • If you have other applications open, you may be prompted that the driver is locked by another process. You may click Next to continue or Exit to allow you to save your work before continuing with this installation.
13. Give the port a name that you can recognize when it appears in the list of available ports.

![Advanced TCP/IP Port Configuration](image)

14. Enter the printer’s IP address. This could be one that was assigned automatically or one that you specified manually in the previous section.

15. Click OK.

A printer driver is created with the port name that you assigned. The new printer port appears in the list of available ports.

![Printer Options](image)

16. Click Next.

You are prompted to launch other setup wizards.
17. Check the desired options, and then click Finish.
   
The printer driver is installed. If you are prompted that other programs might be affected, click the appropriate option to continue.

   ![Zebra Setup Utilities](image)

   The installation for wireless communication is complete.
Print a Test Label and Make Adjustments

After you have loaded media, loaded ribbon (if using Thermal Transfer mode), installed the printer driver, and connected your printer to your computer, use the directions in this section to print a test label. Printing this label allows you to see if your connection is working and if you need to adjust any of the printer settings.

To print a test label and adjust the printer (if necessary), complete these steps:

1. Open the Zebra Setup Utilities to return to the Zebra Setup Utilities screen.

2. Click on one of the available print drivers for your printer.

3. Click Open Printer Tools.
   The Tools window displays the available printer commands.

4. Click Print configuration label.
   The Print Configuration Label command is used to generate a printer configuration label. The printer configuration label contains information about the printer setup, such as sensor type, network ID, ZPL mode, firmware version, and descriptive data in the printer memory.

5. Click Send.

4. Click Send to print a printer configuration label.

If your connection is working correctly and your printer is correctly loaded with media and ribbon (if used), a printer configuration label prints.

Figure 14 • Sample Printer Configuration Label
5. Did the printer configuration label print, and is the print quality acceptable?

<table>
<thead>
<tr>
<th>If...</th>
<th>Then...</th>
</tr>
</thead>
<tbody>
<tr>
<td>The label printed and the print quality is acceptable</td>
<td>Your printer is ready for printing. Continue with the label designer program of your choice. You may use ZebraDesigner™, which you can download from <a href="http://www.zebra.com">http://www.zebra.com</a>.</td>
</tr>
</tbody>
</table>
| The label did not print                     | a. Close the Tools window and make sure that you selected the correct printer driver before you click Open Printer Tools. Try printing the label again.  
   b. If the label still did not print, check the connections between your printer and your computer or your printer and your network.  
   c. If necessary, modify the printer’s settings to make them match your computer’s settings. |
| The label prints, but with poor quality or other issues | See *Printing Issues on page 176* for troubleshooting instructions.                                                                 |

Adjust Printer Settings

This section presents the printer settings that you can change and identifies the tools for changing them. These tools include the following:

- ZPL and Set/Get/Do (SGD) commands (See the Zebra® Programming Guide for more information.)
- The printer’s user menus (See Idle Display, Home Menu, and User Menus on page 17 for more information.)
- The printer’s web pages when the printer has an active wired or wireless print server connection (See the ZebraNet Wired and Wireless Print Servers User Guide for more information.)

Copies of the referenced manuals are available at http://www.zebra.com/manuals.
**User Menus**  The following are the user menus and the items that appear in each. Click any of the menu items to go to their descriptions.

<td>▲</td>
<td></td>
</tr>
</tbody>
</table>

**Accepted values:**

- to the maximum label length supported by the printer
- **Important** • Specify a value that is at least 1.0 in. (25.4 mm) greater than the actual label length plus the interlabel gap. If you set the value to one that is smaller than the label length, the printer assumes that continuous media is loaded, and the printer cannot calibrate.

For example, if the label length is 6.0 inches (152 mm) including the interlabel gap, set the parameter for at least 7.0 inches (178 mm).

![Diagram of label length and interlabel gap](image)

- **1** Label length (including interlabel gap)

**Main Menu > ** TOOLS

**COPY USB FILE TO E:**

1. Insert a USB flash drive into the printer’s USB host port.
2. Use the UP ARROW or DOWN ARROW to select a file from this menu.
3. Press RIGHT SELECT to select **STORE**.

**STORE E: FILE TO USB**

1. Insert a USB flash drive into the printer’s USB host port.
2. Use the UP ARROW or DOWN ARROW to select a file from this menu.
3. Press RIGHT SELECT to select **STORE**.

*SGD command used:*

- **usb.host.read_list**
- **usb.host.write_list**
### Fill in a Form or Print a Label Format from the Display

Use this menu item to fill in variable fields in a label format and print the label using a Human Input Device (HID), such as a USB keyboard or barcode scanner. A suitable label format must be stored on the E: drive of the printer to use this option.

When the printer finds an HID plugged into the printer’s USB host port, it uses this user menu to prompt you to select a form on the printer’s E: drive. After you have been prompted to fill in each variable ^FN field on the form, you can specify the desired quantity of labels to print.

For more information about using the ^FN command or the SGD commands related to this feature, refer to the Zebra Programming Guide. You can download a copy of the manual from http://www.zebra.com/manuals/.

**User menu item:** *

* This menu item appears only if a USB Flash drive is inserted into the USB host port on the printer.

**Main Menu:**

```
TOOLS

PRINT STATION
SELECT FORM

keyboardinput.zpl

SELECT

1. Insert a USB flash drive into the printer’s USB host port.
   The printer lists available files.
2. Use the UP ARROW or DOWN ARROW to select a file from this menu.
3. Press RIGHT SELECT to select SELECT.
   The printer accesses the file and prompts for the information in the ^FN fields in the file.
4. Use your keyboard or barcode scanner to enter the requested information. When using a keyboard, press <ENTER> after entering the appropriate information in the field.
   When all ^FN fields have been filled, the printer prompts for the number of labels to print.
5. Specify the desired number of labels.
   The specified number of labels is printed with your data in the appropriate fields.
```

**SGD command used:**

- `usb.host.keyboard_input` (must be set to ON)
- `usb.host.template_list`
- `usb.host.fn_field_list`
- `usb.host.fn_field_data`
- `usb.host.fn_last_field`
- `usb.host.template_print_amount`

Calibrate the Ribbon and Media Sensors

Use the procedure in this section to calibrate the printer, which adjusts the sensitivity of the media and ribbon sensors.

- For issues that may be resolved by sensor calibration, see *Printing Issues* on page 176.
- For a summary of the options for initiating calibration, see *Media and Ribbon Sensor Calibration* on page 113.

**Important** • Follow the calibration procedure exactly as presented. All of the steps must be performed even if only one of the sensors requires adjustment. You may press and hold CANCEL at any step in this procedure to cancel the process.

**To perform sensor calibration, complete these steps:**

1. With the printer in the Ready state, initiate media and ribbon calibration in one of these ways:
   - Press and hold PAUSE + CANCEL for 2 seconds.
   - Send the `ezpl.manual_calibration` SGD command to the printer. See the *Zebra Programming Guide* for more information about this command.
   - Navigate to the following menu item on the control panel display. This item is located under the TOOLS menu and the SENSORS menu. See *Idle Display, Home Menu, and User Menus* on page 17 for information about using the control panel and accessing the menus.

   ![MEDIA/RIBBON CAL]

   a. Press RIGHT SELECT to select START.

   The printer does the following:
   - The STATUS light and SUPPLIES light flash yellow once.
   - The PAUSE light blinks yellow.
   - The control panel displays:

   ![MEDIA/RIBBON CAL]

   LOAD BACKING
   REMOVE RIBBON
2. **Caution** • The printhead may be hot and could cause severe burns. Allow the printhead to cool.

Open the printhead assembly by rotating the printhead-open lever.

3. Extend the media approximately 8 in. (203 mm) out of the printer.

4. Remove the exposed labels so that only the liner remains.
5. Pull the media into the printer so that only the backing is between the media sensors.

6. Remove the ribbon (if used).

7. Rotate the printhead-open lever downward until it locks the printhead in place.

8. Press PAUSE to begin the media calibration process.
   - The PAUSE light turns off.
   - The SUPPLIES light flashes.
   - The control panel displays:

   ![Media/Ribbon Calibration Display](image_url)
When the process is complete:

- The **SUPPLIES light** stops flashing.
- The **PAUSE light** flashes yellow.
- The control panel displays:

![MEDIA/RIBBON CAL](image)

**Media/Ribbon Cal**

**RELOAD ALL**

**CONTINUE**

9. Open the printhead assembly by rotating the printhead-open lever.
10. Pull the media forward until a label is positioned under the media sensors.

11. Reload the ribbon (if used).

12. Close the printhead.

13. Close the media door.

14. Press PAUSE to enable printing.
Adjust the Printhead Pressure

You may need to adjust printhead pressure if printing is too light on one side, if you use thick media, or if the media drifts from side to side during printing. Use the lowest printhead pressure necessary to produce good print quality.

See Figure 16. The printhead pressure adjustment dials have setting marks from 1 to 4.

**Figure 16 • Printhead Pressure Adjustment Dials**

<table>
<thead>
<tr>
<th>Inside dial setting</th>
<th>Outside dial setting</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>1</td>
</tr>
<tr>
<td>2</td>
<td>2</td>

Lubrication ...................................................................................... 171
Cleaning Schedule and Procedures

Routine preventive maintenance is a crucial part of normal printer operation. By taking good care of your printer, you can minimize the potential problems that you might have with it and help to achieve and to maintain your standards for print quality.

Over time, the movement of media or ribbon across the printhead wears through the protective ceramic coating, exposing and eventually damaging the print elements (dots). To avoid abrasion:

- Clean the printhead frequently.
- Minimize printhead pressure and burn temperature (darkness) settings by optimizing the balance between the two.
- When using Thermal Transfer mode, ensure that the ribbon is as wide or wider than the media to prevent exposing the printhead elements to the more abrasive label material.

**Important** • Zebra is not responsible for damage caused by the use of cleaning fluids on this printer.

Specific cleaning procedures are provided on the following pages. Table 14 shows the recommended cleaning schedule. These intervals are intended as guidelines only. You may have to clean more often, depending upon your application and media.

<table>
<thead>
<tr>
<th>Area</th>
<th>Method</th>
<th>Interval</th>

<td>Air blow</td>
<td>Once every six months.</td>
</tr>
</tbody>
</table>

* Zebra recommends using the Preventive Maintenance Kit (p/n 47362 or p/n 105950-035 - multipack). In place of this kit, you may use a clean swab dipped in 99.7% isopropyl alcohol.  
  For 600 dpi printers, use Save-a-Printhead cleaning film. This specially coated material removes contamination buildup without damaging the printhead. Call your authorized reseller or distributor for more information.
Clean the Exterior, the Media Compartment, and the Sensors

Over time, dust, grime, and other debris may build up on the outside and inside of your printer, particularly in a harsh operating environment.

Printer Exterior

You may clean the exterior surfaces of the printer with a lint-free cloth and a small amount of a mild detergent, if necessary. Do not use harsh or abrasive cleaning agents or solvents.

Important • Zebra is not responsible for damage caused by the use of cleaning fluids on this printer.

Media Compartment and Sensors

To clean the sensors, complete these steps:

1. Brush, air blow, or vacuum any accumulated paper lint and dust away from the media and ribbon paths.

2. Brush, air blow, or vacuum any accumulated paper lint and dust away from the sensors.

<p>| | |</p>
<table>
<thead>
<tr>

<tbody>
<tr>
<td>1</td>
<td>Take-label sensor</td>
</tr>
<tr>
<td>2</td>
<td>Ribbon sensor reflector</td>
</tr>
<tr>
<td>3</td>
<td>Media sensor</td>
</tr>
</tbody>
</table>
Clean the Printhead and Platen Roller

Inconsistent print quality, such as voids in the bar code or graphics, may indicate a dirty printhead. For the recommended cleaning schedule, see Table 14 on page 154.

**Caution** • While performing any tasks near an open printhead, remove all rings, watches, hanging necklaces, identification badges, or other metallic objects that could touch the printhead. You are not required to turn off the printer power when working near an open printhead, but Zebra recommends it as a precaution. If you turn off the power, you will lose all temporary settings, such as label formats, and you must reload them before you resume printing.

**Note** • For printers with a peel assembly, keep the peel assembly closed while cleaning the platen roller to reduce the risk of bending the tear-off/peel-off bar.

**Caution** • The printhead may be hot and could cause severe burns. Allow the printhead to cool.

**Caution** • Before touching the printhead assembly, discharge any built-up static electricity by touching the metal printer frame or by using an antistatic wriststrap and mat.

**To clean the printhead and platen roller, complete these steps:**

1. Raise the media door.
2. **Caution** • The printhead may be hot and could cause severe burns. Allow the printhead to cool.

Open the printhead assembly by rotating the printhead-open lever.

3. Remove the ribbon (if used) and the media.

4. Using the swab from a Zebra Preventive Maintenance Kit, wipe along the brown strip on the printhead assembly from end to end. In place of the Preventive Maintenance Kit, you may use a clean swab dipped in 99.7% isopropyl alcohol. Allow the solvent to evaporate.
5. While manually rotating the platen roller, clean it thoroughly with the swab. Allow the solvent to evaporate.

6. Reload the ribbon (if used) and the media. For instructions, see Load the Ribbon on page 56 or Load the Media on page 30.

7. Rotate the printhead-open lever downward until it locks the printhead in place.
8. Close the media door.

The printer is ready to operate.

9. Press PAUSE to exit pause mode and enable printing.

The printer may perform a label calibration or feed a label, depending on your settings.

**Note** • If performing this procedure does not improve print quality, try cleaning the printhead with *Save-A-Printhead* cleaning film. This specially coated material removes contamination buildup without damaging the printhead. Call your authorized Zebra reseller for more information.
Clean the Peel Assembly

The peel assembly, which is part of the Peel-Off and Liner Take-Up options, consists of several spring-loaded rollers to ensure the proper roller pressure. Clean the pinch roller and tear-off/peel-off bar if adhesive buildup begins to affect peel performance.

**Caution** • Do not use your left hand to assist in closing the Peel assembly. The top edge of the Peel roller/assembly could pinch your fingers.

If adhesive buildup affects peel-off performance, complete these steps:

1. Raise the media door.

2. **Caution** • The printhead may be hot and could cause severe burns. Allow the printhead to cool.

Open the printhead assembly by rotating the printhead-open lever.
3. Push down the peel-off mechanism release lever to open the peel assembly.

4. Remove any media liner to expose the pinch roller.

5. While manually rotating the pinch roller, clean it thoroughly with the swab from the Preventive Maintenance Kit (part number 47362). In place of the Preventive Maintenance Kit, you may use a clean swab dipped in 99.7% isopropyl alcohol. Allow the solvent to evaporate.

6. Use the swab to remove excess adhesive from the tear-off/peel-off bar. Allow the solvent to evaporate.

   **Important** • Apply minimum force when cleaning the tear-off/peel-off bar. Excessive force can cause the tear-off/peel-off bar to bend, which could have a negative effect on peel performance.

7. Reload the media liner through the peel mechanism. For instructions, see *Final Steps for Peel-Off Mode (with or without Liner Take-Up)* on page 38.
8. **Caution** • Use the peel release lever and your right hand to close the peel assembly. Do not use your left hand to assist in closing. The top edge of the peel roller/assembly could pinch your fingers.

Close the peel assembly using the peel-off mechanism release lever.

9. Rotate the printhead-open lever downward until it locks the printhead in place.
10. Close the media door.

The printer is ready to operate.

11. Press PAUSE to exit pause mode and enable printing.

The printer may perform a label calibration or feed a label, depending on your settings.
Clean and Lubricate the Cutter Module

If the cutter is not cutting the labels cleanly or if it jams with labels, clean the cutter blades. After cleaning the blades, apply lubrication to them to help extend the life of your cutter module.

To clean the cutter module, complete these steps:

1. **Caution** • Turn off (O) the printer and disconnect it from the power source before performing the following procedure.

   Turn off (O) the printer and disconnect the AC power cord.

2. Raise the media door.

3. Remove media that is loaded through the cutter module.

4. Loosen and remove the thumbscrew and lock washer on the cutter shield.
5. **Caution** • The cutter blade is sharp. Do not touch or rub the blade with your fingers.

Remove the cutter shield.

6. If necessary, rotate the cutter motor thumbscrew to fully expose the V-shaped cutter blade (1).
7. Using the swab from the Preventive Maintenance Kit (part number 47362), wipe along the upper cutting surface and the cutter blade. In place of the Preventive Maintenance Kit, you may use a clean swab dipped in 99.7% isopropyl alcohol. Allow the solvent to evaporate.

8. When the solvent has evaporated, soak a clean swab in a general-purpose, higher-viscosity silicone or PTFE oil lubricant.
9. Apply an even layer along all exposed surfaces of both cutter blades. Remove any excess oil so that none of it comes in contact with the printhead or platen roller.

10. **Caution** • The cutter blade is sharp. For operator safety, replace the cutter shield.

   Replace the cutter shield (1) and secure it with the thumbscrew and lock washer that you removed earlier (2).
11. Close the media door.

12. Plug the printer into its power source, and then turn on (I) the printer.
   The cutter blade returns to its operating position.

13. If the cutter continues to perform unsatisfactorily, contact an authorized service technician.
Remove Used Ribbon

At minimum, remove used ribbon from the ribbon take-up spindle each time you change the roll of ribbon. With ribbon that is half or less the width of the printhead, remove used ribbon each time you load a new roll of media. This ensures that uneven pressure on the ribbon take-up spindle does not interfere with the ribbon release bars on the spindle.

To remove used ribbon, complete these steps:

1. Has the ribbon run out?

<table>
<thead>
<tr>
<th>If the ribbon...</th>
<th>Then</th>
</tr>
</thead>
<tbody>
<tr>
<td>Ran out</td>
<td>Continue with the next step.</td>
</tr>
<tr>
<td>Did not run out</td>
<td>Cut or break the ribbon before the ribbon take-up spindle.</td>
</tr>
</tbody>
</table>

Caution • Do not cut the ribbon directly on the ribbon take-up spindle. Doing so may damage the spindle.

2. While holding the ribbon take-up spindle, turn the ribbon release knob to the left until it stops.

The ribbon release bars pivot down, easing the spindle’s grip on the used ribbon.
3. After the ribbon release bars have pivoted down, if possible, turn the ribbon take-up spindle one full to the right to help loosen the ribbon on the spindle.

4. Slide the used ribbon off of the ribbon take-up spindle and discard.
Replacing Printer Components

Some printer components, such as the printhead and platen roller, may wear out over time and can be replaced easily. Regular cleaning may extend the life of some of these components. See Table 14 on page 154 for the recommended cleaning intervals.

Ordering Replacement Parts

For optimal printing quality and proper printer performance across our product line, Zebra strongly recommends the use of Zebra Certified Supplies as part of the total solution. Specifically, the ZT400 Series printers are designed to work only with genuine Zebra printheads, thus maximizing safety and print quality.

Contact your authorized Zebra reseller for part ordering information.

Recycling Printer Components

The majority of this printer’s components are recyclable. The printer’s main logic board may include a battery that you should dispose of properly.

Do not dispose of any printer components in unsorted municipal waste. Please dispose of the battery according to your local regulations, and recycle the other printer components according to your local standards. For more information, see http://www.zebra.com/environment.

Lubrication

The only lubrication needed for this printer is for the cutter module. Follow the instructions in Clean and Lubricate the Cutter Module on page 164. Do not lubricate any other parts of the printer.

---

Caution • Some commercially available lubricants will damage the finish and the mechanical parts if used on this printer.
This section provides information about errors that you might need to troubleshoot. Assorted diagnostic tests are included.

For videos of some common procedures, go to http://www.zebra.com/zt400-info.

# Ribbon Problems

Table 17 identifies problems that may occur with ribbon, the possible causes, and the recommended solutions.

For videos of some common procedures, go to [http://www.zebra.com/zt400-info](http://www.zebra.com/zt400-info).

## Table 17 • Ribbon Problems

<table>
<thead>
<tr>
<th>Problem</th>
<th>Possible Cause</th>
<th>Recommended Solution</th>
</tr>
</thead>
</table>
| Broken or melted ribbon | Darkness setting too high. | 1. Reduce the darkness setting. See Print Darkness on page 100 for how to change the darkness setting.  
2. Clean the printhead thoroughly. See Clean the Printhead and Platen Roller on page 156. |
| The ribbon is coated on the wrong side and cannot be used in this printer. | Replace the ribbon with one coated on the correct side. For more information, see Coated Side of Ribbon on page 20. |
| Wrinkled ribbon | Ribbon was loaded incorrectly. | Load the ribbon correctly. See Load the Ribbon on page 56.  
Incorrect burn temperature. | For optimal print quality, set the darkness to the lowest possible setting for your application. You may want to perform the FEED Self Test on page 194 to determine the ideal darkness setting.  
See Print Darkness on page 100 for how to change the darkness setting.  
Incorrect or uneven printhead pressure. | Set the printhead pressure to the minimum needed for good print quality. See Adjust the Printhead Pressure on page 148.  
Media not feeding properly; “walking” from side to side. | Make sure that media is snug by adjusting the media guide, or call a service technician.  
The printhead or platen roller may be installed incorrectly. | Call a service technician.  
In thermal transfer mode, the printer did not detect the ribbon even though it is loaded correctly. | The printer may have been calibrated without ribbon or without the ribbon loaded properly. | 1. Make sure that ribbon is loaded correctly so that it can be detected by the ribbon sensor. Under the printhead, the ribbon should track all the way back, near the printer’s firewall. See Load the Ribbon on page 56.  
2. Calibrate the printer. See Calibrate the Ribbon and Media Sensors on page 143.  
The printer indicates that ribbon is out, even though ribbon is loaded correctly. | The printer was not calibrated for the label and ribbon being used. | Calibrate the printer. See Calibrate the Ribbon and Media Sensors on page 143.  |
RFID Problems

Table 18 identifies problems that may occur with RFID printers, the possible causes, and the recommended solutions. For more information about RFID, refer to the *RFID Programming Guide 3*. A copy of the manual is available at [http://www.zebra.com/manuals](http://www.zebra.com/manuals) or on the user CD that came with your printer.

<table>
<thead>
<tr>
<th>Problem</th>
<th>Possible Cause</th>
<th>Recommended Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>The RFID-enabled printer voids every label.</td>
<td>The printer is not calibrated for the media being used.</td>
<td>Manually calibrate the printer (see <em>Calibrate the Ribbon and Media Sensors</em> on page 143).</td>
</tr>
<tr>
<td>You are using an RFID label with a tag type that is not supported by your printer.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>The printer is unable to communicate with the RFID reader.</td>
<td>1. Turn off (O) the printer. 2. Wait 10 seconds. 3. Turn on (I) the printer. 4. If the problem persists, you may have a bad RFID reader or a loose connection between the RFID reader and the printer. Contact Technical Support or an authorized Zebra RFID service technician for assistance.</td>
<td></td>
</tr>
<tr>
<td>Radio frequency (RF) interference from another RF source.</td>
<td>Do one or more of the following as necessary: • Move the printer away from fixed RFID readers or other RF sources. • Make sure that the media door is closed at all times during RFID programming.</td>
<td></td>
</tr>
<tr>
<td>The settings are incorrect in your label designer software.</td>
<td>The software settings override the printer settings. Make sure that the software and printer settings match.</td>
<td></td>
</tr>
<tr>
<td>You are using an incorrect programming position, particularly if the tags being used are within printer specifications.</td>
<td>Do one or more of the following as necessary: • Check the RFID programming position or the program position setting in your label designer software. If the position is incorrect, change the setting. • Restore the RFID programming position back to the default value. For more information, refer to the <em>RFID Programming Guide 3</em>. For transponder placement details, go to <a href="http://www.zebra.com/transponders">http://www.zebra.com/transponders</a>.</td>
<td></td>
</tr>
<tr>
<td>You are sending RFID ZPL or SGD commands that are incorrect.</td>
<td>Check your label formats. For more information, refer to the <em>RFID Programming Guide 3</em>.</td>
<td></td>
</tr>
<tr>
<td>Problem</td>
<td>Possible Cause</td>
<td>Recommended Solution</td>
</tr>
<tr>
<td>---------</td>
<td>---------------</td>
<td>---------------------</td>
</tr>
<tr>
<td>Low yields. Too many RFID tags per roll are voided.</td>
<td>The RFID labels are not within specifications for the printer, which means that the transponder is not in an area that can be programmed consistently.</td>
<td>Make sure that the labels meet transponder placement specifications for your printer. See <a href="http://www.zebra.com/transponders">http://www.zebra.com/transponders</a> for transponder placement information. For more information, refer to the RFID Programming Guide 3, or contact an authorized Zebra RFID reseller.</td>
</tr>
<tr>
<td>Incorrect read and write power levels for the RFID tag type.</td>
<td></td>
<td>Change the RFID read and write power levels. For instructions, refer to the RFID Programming Guide 3.</td>
</tr>
</tbody>
</table>
| Radio frequency (RF) interference from another RF source. | | Do one or more of the following as necessary:  
  • Move the printer away from fixed RFID readers.  
  • Make sure that the media door is closed at all times during RFID programming. |
| The printer is using outdated printer firmware and reader firmware versions. | | Go to [http://www.zebra.com/firmware](http://www.zebra.com/firmware) for updated firmware. |
| The printer stops at the RFID inlay. | The printer calibrated the label length only to the RFID inlay instead of to the interlabel gap. | 1. Select FEED for the MEDIA POWER UP and HEAD CLOSE parameters (see Power-Up Action on page 109 or HEAD CLOSE ACTION on page 110).  
2. Manually calibrate the printer (see Calibrate the Ribbon and Media Sensors on page 143). |
| The DATA light flashes indefinitely after you attempt to download printer or reader firmware. | The download was not successful. For best results, cycle power on the printer before downloading any firmware. | 1. Turn off (O) the printer.  
2. Wait 10 seconds.  
3. Turn on (I) the printer.  
4. Attempt to download the firmware again.  
5. If the problem persists, contact Technical Support. |
### Table 18 • RFID Problems (Continued)

<table>
<thead>
<tr>
<th>Problem</th>
<th>Possible Cause</th>
<th>Recommended Solution</th>
</tr>
</thead>
</table>
| RFID parameters do not appear in Setup mode, and RFID information does not appear on the printer configuration label. | The printer was powered off (O) and then back on (I) too quickly for the RFID reader to initialize properly.                                                                                             | Wait at least 10 seconds after turning the printer power off before turning it back on.  
   1. Turn off (O) the printer.  
   2. Wait 10 seconds.  
   3. Turn on (I) the printer.  
   4. Check for the RFID parameters in Setup mode or for RFID information on a new configuration label.                                       |
| The printer does not void RFID labels that are not programmed correctly. | An incorrect version of printer or reader firmware was loaded on the printer.                                                                                                                                   | 1. Verify that the correct firmware version is loaded on your printer. For more information, refer to the *RFID Programming Guide 3*.  
   2. Download the correct printer or reader firmware if necessary.  
   3. If the problem persists, contact Technical Support.                                                                                                   |
| The printer is unable to communicate with the RFID subsystem.           |                                                                                                                                                                                                              | 1. Turn off (O) the printer.  
   2. Wait 10 seconds.  
   3. Turn on (I) the printer.  
   4. If the problem persists, you may have a bad RFID reader or a loose connection between the RFID reader and the printer. Contact Technical Support or an authorized service technician for assistance. |
Error Messages

The control panel displays messages when there is an error. See Table 19 for errors, the possible causes, and the recommended solutions.

QuickHelp Pages Most error messages will include the option to view a QuickHelp page. The lower right-hand corner of the message displays QR.

To access a QuickHelp page from an error message, do the following:

1. Press RIGHT SELECT to select QR. The printer displays a QuickHelp page specific to that error message. This page includes a QR code, such as this.

2. Scan the QR code with a smartphone.
   Your phone accesses either a video specific to that error message or the Zebra support page for your printer.

## Communications Problems

Table 20 identifies problems with communications, the possible causes, and the recommended solutions.

### Table 20 • Communications Problems

<table>
<thead>
<tr>
<th>Problem</th>
<th>Possible Cause</th>
<th>Recommended Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>A label format was sent to the printer but was not recognized. The DATA light does not flash.</td>
<td>The communication parameters are incorrect.</td>
<td>Check the printer driver or software communications settings (if applicable) for your connection. You may wish to reinstall the printer driver following the instructions in <em>Install the Printer Driver and Connect the Printer to the Computer</em> on page 60. If you are using serial communication, check the serial port settings. See <em>Port Settings</em> on page 138. If you are using serial communication, make sure that you are using a null modem cable or a null modem adaptor. Check the printer’s handshake protocol setting. The setting used must match the one being used by the host computer. See <em>Host Handshake</em> on page 139.</td>
</tr>
<tr>
<td>A label format was sent to the printer but was not recognized. The DATA light flashes but no printing occurs.</td>
<td>The prefix and delimiter characters set in the printer do not match the ones in the label format.</td>
<td>Verify the prefix and delimiter characters. See <em>Command Character</em> on page 133 and <em>Delimiter Character</em> on page 134. Incorrect data is being sent to the printer. Check the communication settings on the computer. Ensure that they match the printer settings. If the problem continues, check the label format.</td>
</tr>
<tr>
<td>A label format was sent to the printer. Several labels print, then the printer skips, misplaces, misses, or distorts the image on the label.</td>
<td>The serial communication settings are incorrect.</td>
<td>Ensure that the flow control settings match. Check the communication cable length. See <em>General Specifications</em> on page 216 for requirements. Check the printer driver or software communications settings (if applicable).</td>
</tr>
</tbody>
</table>
# Miscellaneous Issues

Table 21 identifies miscellaneous issues with the printer, the possible causes, and the recommended solutions.

</table>
Printer Diagnostics

Self tests and other diagnostics provide specific information about the condition of the printer. The self tests produce sample printouts and provide specific information that helps determine the operating conditions for the printer.

**Important •** Use full-width media when performing self tests. If your media is not wide enough, the test labels may print on the platen roller. To prevent this from happening, check the print width, and ensure that the width is correct for the media that you are using.

Each self test is enabled by pressing a specific control panel key or combination of keys while turning on (I) the printer power. Keep the key(s) pressed until the first indicator light turns off. The selected self test automatically starts at the end of the Power-On Self Test.

**Note •**
- When performing these self tests, do not send data to the printer from the host.
- If your media is shorter than the label to be printed, the test label continues on the next label.
- When canceling a self test prior to its actual completion, always reset the printer by turning it off (O) and then on (I).

**Power-On Self Test**

A Power-On Self Test (POST) is performed each time the printer is turned on (I). During this test, the control panel lights (LEDs) turn on and off to ensure proper operation. At the end of this self test, only the STATUS LED remains lit. When the Power-On Self Test is complete, the media is advanced to the proper position.

**To initiate the Power-On Self Test, complete these steps:**

1. Turn on (I) the printer.
   The POWER LED illuminates. The other control panel LEDs and the LCD monitor the progress and indicate the results of the individual tests. All messages during the POST display in English; however, if the test fails, the resulting messages cycle through the international languages as well.
CANCEL Self Test

The CANCEL self test prints a printer configuration label and a network configuration label. For other ways to print these labels, see Print Information on page 107.

To perform the CANCEL Self Test, complete these steps:

1. Turn off (O) the printer.

2. Press and hold CANCEL while turning on (I) the printer. Hold CANCEL until the first control panel light turns off.

   The printer prints a printer configuration label (Figure 17) and then a network configuration label (Figure 18).

Figure 17 • Sample Printer Configuration Label

![Sample Printer Configuration Label](image1)

Figure 18 • Sample Network Configuration Label

![Sample Network Configuration Label](image2)
PAUSE Self Test

This self test can be used to provide the test labels required when making adjustments to the printer’s mechanical assemblies or to determine if any printhead elements are not working. Figure 19 shows a sample printout.

To perform a PAUSE self test, complete these steps:

1. Turn off (O) the printer.

2. Press and hold PAUSE while turning on (I) the printer. Hold PAUSE until the first control panel light turns off.
   - The initial self test prints 15 labels at the printer’s slowest speed, and then automatically pauses the printer. Each time PAUSE is pressed, an additional 15 labels print. Figure 19 shows a sample of the labels.

   1. While the printer is paused, pressing CANCEL alters the self test. Each time PAUSE is pressed, 15 labels print at 6 in. (152 mm) per second.
   2. While the printer is paused, pressing CANCEL again alters the self test a second time. Each time PAUSE is pressed, 50 labels print at the printer’s slowest speed
   3. While the printer is paused, pressing CANCEL again alters the self test a third time. Each time PAUSE is pressed, 50 labels print at 6 in. (152 mm) per second.
   4. While the printer is paused, pressing CANCEL again alters the self test a fourth time. Each time PAUSE is pressed, 15 labels print at the printer’s maximum speed.

3. To exit this self test at any time, press and hold CANCEL.
FEED Self Test

Different types of media may require different darkness settings. This section contains a simple but effective method for determining the ideal darkness for printing bar codes that are within specifications.

During the FEED self test, labels are printed at different darkness settings at two different print speeds. The relative darkness and the print speed are printed on each label. The bar codes on these labels may be ANSI-graded to check print quality.

During this test, one set of labels is printed at 2 ips, and another set is printed at 6 ips. The darkness value starts at three settings lower than the printer’s current darkness value (relative darkness of –3) and increase until the darkness is three settings higher than the current darkness value (relative darkness of +3).

To perform a FEED self test, complete these steps:

1. Print a configuration label to show the printer’s current settings.
2. Turn off (O) the printer.
3. Press and hold FEED while turning on (I) the printer. Hold FEED until the first control panel light turns off.
   The printer prints a series of labels (Figure 20) at various speeds and at darkness settings higher and lower than the darkness value shown on the configuration label.

   Figure 20 • FEED Test Label

4. See Figure 21 and Table 22. Inspect the test labels and determine which one has the best print quality for your application. If you have a bar code verifier, use it to measure bars/spaces and calculate the print contrast. If you do not have a bar code verifier, use your eyes or the system scanner to choose the optimal darkness setting based on the labels printed in this self test.
Figure 21 • Bar Code Darkness Comparison

Table 22 • Judging Bar Code Quality

<table>
<thead>
<tr>
<th>Print Quality</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Too dark</td>
<td>Labels that are too dark are fairly obvious. They may be readable but not “in-spec.”</td>
</tr>
<tr>
<td></td>
<td>• The normal bar code bars increase in size.</td>
</tr>
<tr>
<td></td>
<td>• The openings in small alphanumeric characters may fill in with ink.</td>
</tr>
<tr>
<td></td>
<td>• Rotated bar code bars and spaces run together.</td>
</tr>
<tr>
<td>Slightly dark</td>
<td>Slightly dark labels are not as obvious.</td>
</tr>
<tr>
<td></td>
<td>• The normal bar code will be “in-spec.”</td>
</tr>
<tr>
<td></td>
<td>• Small character alpha numerics will be bold and could be slightly filled in.</td>
</tr>
<tr>
<td></td>
<td>• The rotated bar code spaces are small when compared to the “in-spec” code, possibly making the code unreadable.</td>
</tr>
</tbody>
</table>
5. Note the relative darkness value and the print speed printed on the best test label.

6. Add or subtract the relative darkness value from the darkness value specified on the configuration label. The resulting numeric value is the best darkness value for that specific label/ribbon combination and print speed.

7. If necessary, change the darkness value to the darkness value on the best test label.

8. If necessary, change the print speed to the same speed as on the best test label.

Table 22 • Judging Bar Code Quality (Continued)

<table>
<thead>
<tr>
<th>Print Quality</th>
<th>Description</th>
</tr>
</thead>
</table>
| **“In-spec”** | The “in-spec” bar code can only be confirmed by a verifier, but it should exhibit some visible characteristics.  
• The normal bar code will have complete, even bars and clear, distinct spaces.  
• The rotated bar code will have complete, even bars and clear, distinct spaces. Although it may not look as good as a slightly dark bar code, the bar code will be “in-spec.”  
• In both normal and rotated styles, small alphanumeric characters look complete. |
| **Slightly light** | Slightly light labels are, in some cases, preferred to slightly dark ones for “in-spec” bar codes.  
• Both normal and rotated bar codes will be in spec, but small alphanumeric characters may not be complete. |
| **Too light** | Labels that are too light are obvious.  
• Both normal and rotated bar codes have incomplete bars and spaces.  
• Small alphanumeric characters are unreadable. |
**FEED + PAUSE Self Test**

Performing this self test resets the printer configuration to the factory default values. Perform a sensor calibration after this self test. (See *Calibrate the Ribbon and Media Sensors* on page 143.)

**To perform a FEED and PAUSE self test, complete these steps:**

1. Turn off (O) the printer.
2. Press and hold FEED + PAUSE while turning on (I) the printer.
3. Hold FEED + PAUSE until the first control panel light turns off.

   The printer configuration is reset to the factory default values. No labels print at the end of this test.

**CANCEL + PAUSE Self Test**

Performing this self test resets the network configuration to the factory default values.

**To perform a CANCEL and PAUSE self test, complete these steps:**

1. Turn off (O) the printer.
2. Press and hold CANCEL + PAUSE while turning on (I) the printer.
3. Hold CANCEL + PAUSE until the first control panel light turns off.

   The printer’s network configuration is reset to the factory default values. No labels print at the end of this test.
Communication Diagnostics Test

The communication diagnostics test is a troubleshooting tool for checking the interconnection between the printer and the host computer. When the printer is in diagnostics mode, it prints all data received from the host computer as straight ASCII characters with the hex values below the ASCII text. The printer prints all characters received, including control codes such as CR (carriage return). Figure 22 shows a typical test label from this test.

Note • The test label prints upside-down.

Figure 22 • Communications Diagnostics Test Label

To use communications diagnostics mode, complete these steps:

1. Set the print width equal to or less than the label width being used for the test. See Print Width on page 103 for more information.

2. Set the DIAGNOSTICS MODE option to ENABLED. For methods, see Communication Diagnostics Mode on page 114.
   The printer enters diagnostics mode and prints any data received from the host computer on a test label

3. Check the test label for error codes. For any errors, check that your communication parameters are correct.
   Errors show on the test label as follows:
   • FE indicates a framing error.
   • OE indicates an overrun error.
   • PE indicates a parity error.
   • NE indicates noise.

4. Turn the printer off (O) and then back on (I) to exit this self test and return to normal operation.
Sensor Profile

Use the sensor profile image (which will extend across several actual labels or tags) to troubleshoot the following situations:

- The printer experiences difficulty in determining gaps (web) between labels.
- The printer incorrectly identifies preprinted areas on a label as gaps (web).
- The printer cannot detect ribbon.

With the printer in the Ready state, print a sensor profile in one of these ways:

| Using the buttons on the control panel | a. Turn off (O) the printer.  
|                                         | b. Press and hold FEED + CANCEL while turning on (I) the printer.  
|                                         | c. Hold FEED + CANCEL until the first control panel light turns off.  
| Using ZPL                              | a. Send the ~JG command to the printer. See the Zebra Programming Guide for more information about this command.  
| Using the control panel display        | a. Navigate to the following item under the SENSORS menu. See Idle Display, Home Menu, and User Menus on page 17 for information about using the control panel and accessing the menus.  
|                                         | b. Press RIGHT SELECT to select PRINT.  

Compare your results to the examples shown in this section. If the sensitivity of the sensors must be adjusted, calibrate the printer (see Calibrate the Ribbon and Media Sensors on page 143).
**Ribbon Sensor Profile (Figure 23)** The line labeled RIBBON (1) on the sensor profile indicates the ribbon sensor readings. The ribbon sensor threshold setting is indicated by OUT (2). If the ribbon readings are below the threshold value, the printer does not acknowledge that ribbon is loaded.

![Figure 23 - Sensor Profile (Ribbon Section)](image)

**Media Sensor Profile (Figure 24)** The line labeled MEDIA (1) on the sensor profile indicates the media sensor readings. The media sensor threshold settings is indicated by WEB (2). The media out threshold is indicated by OUT (3). The downward spikes (4) indicate gaps between labels (the web), and the lines between the spikes (5) indicate where labels are located.

If you compare the sensor profile printout to a length of your media, the spikes should be the same distance apart as the gaps on the media. If the distances are not the same, the printer may be having difficulty determining where the gaps are located.

![Figure 24 - Sensor Profile (Media Section)](image)
Using a USB Host Port and the Print Touch Feature

This section will teach you how to use a USB host port and how to use the printer’s Print Touch feature with an Android™-based, NFC-enabled device (such as a smart phone or tablet). The information is presented in the form of exercises with some SGD commands listed for advanced users.

Contents

- Items Required for the Exercises ................................................................. 202
- Files for Completing the Exercises .............................................................. 202

  - Exercise 1: Copy Files to a USB Flash Drive and Perform USB Mirror .......... 205
  - Exercise 2: Print a Label Format from a USB Flash Drive .......................... 207
  - Exercise 3: Copy Files to/from a USB Flash Drive .................................... 208
  - Exercise 4: Enter Data for a Stored File with a USB Keyboard and Print a Label ... 210
- Print Touch/Near Field Communication (NFC) ............................................. 211
  - Exercise 5: Enter Data for a Stored File with a Smart Device and Print a Label ... 212
Items Required for the Exercises

To perform the exercises in this document, you will need the following:

- a USB Flash drive (sometimes called a “thumb drive” or “memory stick”) that is up to 1 Terabyte (1 TB). The printer will not recognize drives larger than 1 TB.
- a USB keyboard
- the various files attached below
- the free Zebra Utilities app for your smartphone (search for Zebra Tech in the Google Play store)

Files for Completing the Exercises

Most of the actual files that you need to complete the exercises in these sections are attached here. Copy these files to your computer before you begin the exercises. Where possible, the contents of the files are shown. The contents of files that contain coded content, which cannot be viewed as text or as an image, are not included.

File 1: ZEBRA.BMP

![Zebra Logo]

File 2: SAMPLELABEL.TXT

```
^XA
^FO100,75^XGE:zebra.bmp^FS
^FO100,475^A0N,50,50^FDMirror from USB
Completed^FS
^XZ
```

This simple label format prints the Zebra logo and a line of text at the end of the mirroring exercise.
File 3: LOGO.ZPL

File 4: USBSTOREDFILE.ZPL

```zpl
CT~~CD,~CC~CT~
~XA~TA012~JSN~LT0~LH0,0~JMA~PR4,4~SD15~LRN~CI0~XZ
~DG000.GRF,07680,024,,[image data]

~LS0
~SL0
~BY3,3,91~FT35,250~BCN,,Y,N~FC%,{{^FD%d/%m/%Y^FS
~FT608,325~XG000.GRF,1,1~FS
~FT26,75~AN,28,28~FB^FDThis label was printed from a format stored^FS
~FT26,125~AN,28,28~FB^FDOn a USB Flash Memory drive. ^FS
~BY3,3,90~FT33,425~BCN,,Y,N
~FD>:Zebra Technologies^FS
~PQ1,0,1,Y^XZ
~XA~ID000.GRF^FS^XZ
```

This label format prints an image and text. This file will be stored on the USB memory device at the root level so that it can be printed.

File 5: VLS_BONKGRF.ZPL

File 6: VLS_EIFFEL.ZPL

File 7: KEYBOARDINPUT.ZPL

```zpl
^XA
~CI28
~BY2,3,91~FT38,184~BCN,,Y,N~FC%,{{^FD%d/%m/%Y^FS
~FO385,75~XGE:zebra.bmp^FS
~FT40,70~AN,28,28~FB^FDThis label was printed using a keyboard input. ^FS
~FT35,260~AN,28,28~FB^FDThis label was printed by:^FS
~FT33,319~AN,28,28~FN1~Enter Name~^FS
~XZ
```

This label format, used for the USB keyboard input exercise, does the following:

- creates a barcode with the current date, based on your Real-Time Clock (RTC) setting
- prints the Zebra logo graphic
- prints fixed text
- ^FN prompts you to enter your name, and the printer prints what you entered
Using a USB Host Port and the Print Touch Feature

Items Required for the Exercises

File 8: SMARTDEVINPUT.ZPL

```
^XA
^CI28
^BY2,3,91^FT38,184^BCN,,Y,N^FC%,{,#^FD%d/%m/%Y^FS
^FO385,75^XGE:zebra.bmp^FS
^FT40,70^A0N,28,28^FH\This label was printed using a smart device input. ^FS
^FT35,260^A0N,28,28^FH\This label was printed by:\^FS
^FT33,319^A0N,28,28^FN1"Enter Name"^FS^XZ
```

The same label format as the previous label, only with different text printing. This format is used for the smart device input exercise.

File 9: Firmware File

You may want to download a firmware file for your printer and copy it to your computer for use during the exercises. You may omit doing this if you wish.

You can download the latest firmware file from http://www.zebra.com/firmware.
USB Host

Your printer may be equipped with one or two USB host ports on the front panel. A USB host port allows you to connect USB devices—such as a keyboard, scanner, or USB Flash drive—to the printer. The exercises in this section will teach you how to perform USB mirror, how to transfer files to and from the printer, and how to provide information for which you are prompted and then print a label using that information.

**Important** • When using a USB host port, files should be named only with 1 to 16 alphanumeric characters (A, a, B, b, C, c, ..., 0, 1, 2, 3, ...). Do not use Asian characters, Cyrillic characters, or accented characters in file names. Some functions may not work properly if there are underscores in a file name. Use periods instead.

**Exercise 1: Copy Files to a USB Flash Drive and Perform USB Mirror**

1. On your USB Flash Drive, create the following:

   - a folder called **Zebra**
   - in that folder, three subfolders:
     - **appl**
     - **commands**
     - **files**

2. In the **/appl** folder, place a copy of the latest firmware for your printer.

   **Note** • Some functions may not work properly if there are underscores in a file name. Use periods instead.

3. In the **/files** folder, place the following file:

   - **File 1: ZEBRA.BMP**

4. In the **/commands** folder, place the following files:

   - **File 2: SAMPLELABEL.TXT**
   - **File 3: LOGO.ZPL**

5. Insert the USB Flash drive into a USB host port on the front of your printer.
6. Observe the control panel and wait.

The following should happen:

• If the firmware on the USB Flash drive is different than what is on the printer, the firmware downloads to the printer. The printer then restarts and prints a printer configuration label. (If there is no firmware on the USB Flash drive or if the firmware version is the same, the printer skips this action.)

• The printer downloads the files in the /files folder and briefly shows the names of the files that are downloading on the display.

• The printer executes any files in the /commands folder.

• The printer restarts and then displays the message MIRROR PROCESSING FINISHED.

7. Remove the USB Flash drive from the printer.

Advanced User Information

See the Zebra® Programming Guide for more information about these commands.

Enable/disable mirroring:

! U1 setvar "usb.mirror.enable" "value"
Values: "on" or "off"

Enable/disable automatic mirroring that occurs when a USB Flash drive is inserted into the USB host port:

! U1 setvar "usb.mirror.auto" "value"
Values: "on" or "off"

Specify the number of times that the mirror operation will be repeated if it fails:

! U1 setvar "usb.mirror.error_retry" "value"
Values: 0 to 65535

Change the path to the location on the USB device from which mirror files are retrieved:

! U1 setvar "usb.mirror.appl_path" "new_path"
Default: "zebra/appl"

Change the path to the location on the printer from which mirror files are retrieved:

! U1 setvar "usb.mirror.path" "path"
Default: "zebra"

Enable/disable the ability to use the USB port:

! U1 setvar "usb.host.lock_out" "value"
Values: "on" or "off"
Exercise 2: Print a Label Format from a USB Flash Drive

The Print USB File option allows you to print files from a USB mass storage device, such as a USB Flash drive. Only printable files (.ZPL and .XML) may be printed from the USB mass storage device, and the files must be located at the root level, not in a directory.

1. Copy the following files to your USB Flash drive:
   - File 4: USBSTOREDFILE.ZPL
   - File 5: VLS_BONKGRF.ZPL
   - File 6: VLS_EIFFEL.ZPL

2. Insert the USB Flash drive into a USB host port on the front of your printer.

3. On the printer’s control panel, press the LEFT SELECT button (below the home icon) to access the printer’s Home Menu.

4. Use the ARROW buttons to scroll to the Tools menu.

5. Press OK.

6. Use the ARROW buttons to scroll to PRINT USB FILE.

   ![PRINT USB FILE Menu]

   The printer loads any executable files and processes them. The available files are listed. SELECT ALL is available to print all files on the USB Flash drive.

7. If necessary, use the up and down arrow to select USBSTOREDFILE.zpl.

8. Press the RIGHT SELECT button to select PRINT.

   The label prints.
Exercise 3: Copy Files to/from a USB Flash Drive

The Copy USB File option allows you to copy files from a USB mass storage device to the printer’s Flash memory E: drive.

1. Copy the following files to the root directory of your USB Flash drive. Do not put these files into a subfolder.
   - File 7: KEYBOARDINPUT.ZPL
   - File 8: SMARTDEVINPUT.ZPL

2. Insert the USB Flash drive into a USB host port on the front of your printer.

3. On the printer’s control panel, press the LEFT SELECT button to access the printer’s Home Menu.

4. Use the ARROW buttons to scroll to the Tools menu.

5. Press OK.

6. Use the ARROW buttons to scroll to COPY USB FILE TO E:

   ![COPY USB FILE TO E:]
   
   COPY USB FILE TO E:
   
   ▼ STOREFMT.ZPL  ▲

   The printer loads any executable files and processes them. The available files are listed. SELECT ALL is available to copy all of the available files from the USB Flash drive.

7. If necessary, use the UP or DOWN ARROW to select the file STOREFMT.ZPL.

8. Press the RIGHT SELECT button to select STORE
   The printer stores the file in E: memory. All file names are converted to uppercase.

9. Repeat this process to select the file STOREFMTM1.ZPL.

10. Press the RIGHT SELECT button to select STORE
    The printer stores the file in E: memory.
11. Remove the USB Flash drive from the USB host port.

NOTE: You can now copy these files from the printer to a USB Flash drive using the user menu item **STORE E: FILE TO USB**.

The option **SELECT ALL** is available to store all of the available files from the printer to the USB Flash drive. Any .ZPL file that is copied will be post-processed such that the contents of the file will be suitable to be sent to a printer for normal execution.
Exercise 4: Enter Data for a Stored File with a USB Keyboard and Print a Label

The Print Station feature allows you to use a USB Human Interface Device (HID), such as a keyboard or a barcode scanner, to enter ^FN field data into a *.ZPL template file.

1. After performing the previous exercise, plug a USB keyboard into a USB host port.
2. Use the ARROW buttons to scroll to the Tools menu.
3. Press OK.
4. Use the ARROW buttons to scroll to PRINT STATION.

The printer loads any executable files and processes them. The available files are listed.

5. If necessary, use the UP or DOWN ARROW to select the file KEYBOARDINPUT.ZPL.
6. Press the RIGHT SELECT button to choose SELECT.
   The printer accesses the file and prompts you for the information in the ^FN fields in the file. In this case, it prompts you for your name.
7. Type your name, and then press <ENTER>.
   The printer prompts for the number of labels to print.
8. Specify the desired quantity of labels, and then press <ENTER> again.
   The specified number of labels is printed, with your name in the appropriate fields.
Print Touch/Near Field Communication (NFC)

The Zebra Print Touch feature allows you to touch an Android™-based, NFC-enabled device (such as a smart phone or tablet) to the printer’s NFC logo (Figure 25) to pair the device to the printer. This capability allows you to use your device to provide information for which you are prompted and then print a label using that information.

**Important** • Some devices may not support NFC communication with the printer until you alter their settings. If you encounter difficulties, consult your service provider or your smart device manufacturer for more information.

![Figure 25 • NFC Logo Location](image-url)
Exercise 5: Enter Data for a Stored File with a Smart Device and Print a Label

Note • The steps in this exercise may vary somewhat based on your smart device, on your service provider, or on whether you already have the free Zebra Utilities app installed on your smart device.

1. If you do not have the Zebra Utilities app installed on your device, go to the app store for your device, search for the Zebra Utilities app, and install it.

2. Pair your smart device with the printer by holding the smart device next to the NFC icon on the printer.
   a. If necessary, access the Bluetooth information about your printer using your smart device. For instructions, refer to the manufacturer’s documentation for your device.
   b. If necessary, select the Zebra printer’s serial number to pair it with the device.
   c. After your smart device has been detected by the printer, the printer may prompt you to accept or reject the pairing. If necessary, press the LEFT SELECT button on the printer to select ACCEPT. Some smart devices will pair with the printer without this prompt.

The printer and your device are paired.
3. Start the Zebra Utilities app on your device.
   The Zebra Utilities main menu displays.

4. Perform these steps if you have an Apple device:
   a. Tap the Settings icon in the lower-right corner.
   b. Change the setting for Get Labels From Printer to ON.
   c. Tap Done.

5. Tap Files.
   The smart device gets data from the printer and displays it.

   **Note** • This retrieval process may take a minute or more to complete.

6. Scroll through the formats shown and select `E:SMARTDEVINPUT.ZPL`.
   Based on the ^FN field in the label format, the smart device prompts you for your name.

7. Enter your name at the prompt.

8. Change the quantity of labels to print, if desired.

9. Tap PRINT to print the label.

</tbody>
</table>

**USB host port (single or dual)**

See *Using USB Host Ports and the NFC Capabilities on page 199* for more information.

**Limitations and Requirements**

Only one device can be operated from each USB host port. You cannot use an additional device by plugging it into a USB port on another device, nor can you use an adaptor to split a USB host port on the printer to accept more than one device.

**Connections and Configuration**

No additional configuration is necessary.

Power Cord Specifications

**Caution** • For personnel and equipment safety, always use an approved three-conductor power cord specific to the region or country intended for installation. This cord must use an IEC 320 female connector and the appropriate region-specific, three-conductor grounded plug configuration.

Depending on how your printer was ordered, a power cord may or may not be included. If one is not included or if the one included is not suitable for your requirements, see Figure 26 and refer to the following guidelines:

- The overall cord length must be less than 9.8 ft. (3 m).
- The cord must be rated for at least 10 A, 250 V.
- The chassis ground (earth) **must** be connected to ensure safety and reduce electromagnetic interference.

</tbody>
</table>

* Zebra recommends using ribbon that is at least as wide as the media to protect the printhead from wear.

** Depending on your application, you may be able to use ribbon narrower than 2 in. (51 mm), as long as the ribbon is wider than the media being used. To use a narrower ribbon, test the ribbon’s performance with your media to assure that you get the desired results.
alphanumeric  Indicating letters, numerals, and characters such as punctuation marks.

backfeed  When the printer pulls the media and ribbon (if used) backward into the printer so that the beginning of the label to be printed is properly positioned behind the printhead. Backfeed occurs when operating the printer in Tear-Off and Applicator modes.

bar code  A code by which alphanumeric characters can be represented by a series of adjacent stripes of different widths. Many different code schemes exist, such as the universal product code (UPC) or Code 39.

black mark  A registration mark found on the underside of the print media that acts as a start-of-label indication for the printer. (See non-continuous media.)

calibration (of a printer)  A process in which the printer determines some basic information needed to print accurately with a particular media and ribbon combination. To do this, the printer feeds some media and ribbon (if used) through the printer and senses whether to use the direct thermal or thermal transfer print method, and (if using non-continuous media) the length of individual labels or tags.

configuration  The printer configuration is a group of operating parameters specific to the printer application. Some parameters are user selectable, while others are dependent on the installed options and mode of operation. Parameters may be switch selectable, control panel programmable, or downloaded as ZPL II commands. A configuration label listing all the current printer parameters may be printed for reference.

continuous media  Label or tag-stock media that has no notch, gap, or web (media liner only) to separate the labels or tags. The media is one long piece of material.

core diameter  The inside diameter of the cardboard core at the center of a roll of media or ribbon.

diagnostics  Information about which printer functions are not working that is used for troubleshooting printer problems.
die-cut media  A type of label stock that has individual labels stuck to a media liner. The labels may be either lined up against each other or separated by a small distance. Typically the material surrounding the labels has been removed. (See non-continuous media.)

direct thermal  A printing method in which the printhead presses directly against the media. Heating the printhead elements causes a discoloration of the heat-sensitive coating on the media. By selectively heating the printhead elements as the media moves past, an image is printed onto the media. No ribbon is used with this printing method. Contrast this with thermal transfer.

direct thermal media  Media that is coated with a substance that reacts to the application of direct heat from the printhead to produce an image.

dynamic RAM  The memory devices used to store the label formats in electronic form while they are being printed. The amount of DRAM memory available in the printer determines the maximum size and number of label formats that can be printed. This is volatile memory that loses the stored information when power is turned off.

fanfold media  Media that comes folded in a rectangular stack. Contrast this with roll media.

firmware  This is the term used to specify the printer’s operating program. This program is downloaded to the printer from a host computer and stored in FLASH memory. Each time the printer power is turned on, this operating program starts. This program controls when to feed the media forward or backward and when to print a dot on the label stock.

FLASH memory  FLASH memory is non-volatile and maintains the stored information intact when power is off. This memory area is used to store the printer’s operating program. In addition, this memory can be used to store optional printer fonts, graphic formats, and complete label formats.

Font  A complete set of alphanumeric characters in one style of type. Examples include CG Times™, CG Triumvirate Bold Condensed™.

ips (inches-per-second)  The speed at which the label or tag is printed. Many Zebra printers can print from 1 ips to 12 ips.

label  An adhesive-backed piece of paper, plastic, or other material on which information is printed.

label backing (liner)  The material on which labels are affixed during manufacture and which is discarded or recycled by the end-users.

light emitting diode (LED)  Indicators of specific printer status conditions. Each LED is either off, on, or blinking depending on the feature being monitored.

liquid crystal display (LCD)  The LCD is a back-lit display that provides the user with either operating status during normal operation or option menus when configuring the printer to a specific application.

media  Material onto which data is printed by the printer. Types of media include: tag stock, die-cut labels, continuous labels (with and without media liner), non-continuous media, fanfold media, and roll media.
**media sensor**  This sensor is located behind the printhead to detect the presence of media and, for non-continuous media, the position of the web, hole, or notch used to indicate the start of each label.

**media supply hanger**  The stationary arm that supports the media roll.

**non-continuous media**  Media that contains an indication of where one label/printed format ends and the next one begins. Examples are die-cut labels, notched tag-stock, and stock with black mark registration marks.

**non-volatile memory**  Electronic memory that retains data even when the power to the printer is turned off.

**notched media**  A type of tag stock containing a cutout area that can be sensed as a start-of-label indicator by the printer. This is typically a heavier, cardboard-like material that is either cut or torn away from the next tag. (See non-continuous media.)

**peel-off**  A mode of operation in which the printer peels a printed label away from the backing and allows the user to remove it before another label is printed. Printing pauses until the label is removed.

**print speed**  The speed at which printing occurs. For thermal transfer printers, this speed is expressed in terms of ips (inches per second).

**printhead wear**  The degradation of the surface of the printhead and/or the print elements over time. Heat and abrasion can cause printhead wear. Therefore, to maximize the life of the printhead, use the lowest print darkness setting (sometimes called burn temperature or head temperature) and the lowest printhead pressure necessary to produce good print quality. In the thermal transfer printing method, use ribbon that is as wide or wider than the media to protect the printhead from the rough media surface.

**registration**  Alignment of printing with respect to the top (vertical) or sides (horizontal) of a label or tag.

**ribbon**  A band of material consisting of a base film coated with wax or resin “ink.” The inked side of the material is pressed by the printhead against the media. The ribbon transfers ink onto the media when heated by the small elements within the printhead. Zebra ribbons have a coating on the back that protects the printhead from wear.

**ribbon wrinkle**  A wrinkling of the ribbon caused by improper alignment or improper printhead pressure. This wrinkle can cause voids in the print and/or the used ribbon to rewind unevenly. This condition should be corrected by performing adjustment procedures.

**roll media**  Media that comes supplied rolled onto a core (usually cardboard). Contrast this with fanfold media.

**supplies**  A general term for media and ribbon.

**symbology**  The term generally used when referring to a bar code.

**tag**  A type of media having no adhesive backing but featuring a hole or notch by which the tag can be hung on something. Tags are usually made of cardboard or other durable material.
**tear-off** A mode of operation in which the user tears the label or tag stock away from the remaining media by hand.

**thermal transfer** A printing method in which the printhead presses an ink or resin coated ribbon against the media. Heating the printhead elements causes the ink or resin to transfer onto the media. By selectively heating the printhead elements as the media and ribbon move past, an image is printed onto the media. Contrast this with *direct thermal*.

**void** A space on which printing should have occurred, but did not due to an error condition such as wrinkled ribbon or faulty print elements. A void can cause a printed bar code symbol to be read incorrectly or not at all.
