Liability Disclaimer
Inasmuch as every effort has been made to supply accurate information in this manual, Zebra Technologies Corporation is not liable for any erroneous information or omissions. Zebra Technologies Corporation reserves the right to correct any such errors and disclaims liability resulting therefrom.

No Liability for Consequential Damage
In no event shall Zebra Technologies Corporation or anyone else involved in the creation, production, or delivery of the accompanying product (including hardware and software) be liable for any damages whatsoever (including, without limitation, damages for loss of business profits, business interruption, loss of business information, or other pecuniary loss) arising out of the use of or the results of use of or inability to use such product, even if Zebra Technologies Corporation has been advised of the possibility of such damages. Because some states do not allow the exclusion of liability for consequential or incidental damages, the above limitation may not apply to you.

Copyrights
The copyrights in this manual and the label print engine described therein are owned by Zebra Technologies Corporation. Unauthorized reproduction of this manual or the software in the label print engine may result in imprisonment of up to one year and fines of up to $10,000 (17 U.S.C.506). Document Conventions

The following conventions are used throughout this document to convey certain information:

Cautions, Important, and Note

⚠️ **Caution** • Warns you of the potential for electrostatic discharge.

⚠️ **Caution** • Warns you of a potential electric shock situation.

⚠️ **Caution** • Warns you of a situation where excessive heat could cause a burn.

⚠️ **Caution** • Advises you that failure to take or avoid a specific action could result in physical harm to you.

⚠️ **Caution** • Advises you that failure to take or avoid a specific action could result in physical harm to the hardware.

❗️ **Important** • Advises you of information that is essential to complete a task.

🔍 **Note** • Indicates neutral or positive information that emphasizes or supplements important points of the main text.
Introduction to the QLn™ Series Printers

Thank you for choosing our Zebra® QLn™ Series Mobile Printers. You will find these rugged printers will become a productive and efficient addition to your workplace thanks to their innovative design and state of the art features. Zebra Technologies is the leader in industrial printers with world-class support for all of your bar code printers, software, and supplies.

This user’s guide gives you the information you will need to operate the QLn420, QLn320, and QLn220 printers, including QLn Healthcare and Made for iPhone® (MFi) printers. MFi printers provide Apple co-processor (MFi) support which allows an Apple device such as an iPhone or iPad® to authenticate and connect over Bluetooth®.

These printers use CPCL and ZPL programming languages. To create and print labels using the CPCL and ZPL languages, refer to the Programming Guide for CPCL and ZPL (p/n P1012728-008). See Appendix G for instructions on how to access manuals on zebra.com.

QLn Series Software Utilities:
• Zebra Net Bridge™: printer configuration, fleet management
• Zebra Setup Utility: single printer configuration, quick setup
• Zebra Designer Pro: label design
• Zebra Designer Drivers: Windows® driver
• OPOS Driver: Windows driver
• Multiplatform SDK
(These utilities can be found on the Zebra website at http://www.zebra.com/us/en/support-downloads.html. See Appendix G.)
Unpacking and Inspection

- Check all exterior surfaces for damage.
- Open the media cover (refer to “Loading the Media” in the Getting Ready to Print section) and inspect the media compartment for damage.

In case shipping is required, save the carton and all packing material.

Reporting Damage

If you discover shipping damage:
- Immediately notify and file a damage report with the shipping company. Zebra Technologies Corporation is not responsible for any damage incurred during shipment of the printer and will not cover the repair of this damage under its warranty policy.
- Keep the carton and all packing material for inspection.
- Notify your authorized Zebra re-seller.

QLn Series Technology

The QLn420, QLn320 and QLn220 use several technologies made popular in other Zebra Mobile Printer product lines, as well as newer technologies.

Smart Battery

The QLn Series battery pack is a high capacity, smart Lithium Ion battery that contains electronics which allow the printer to monitor its operating parameters. Among these are the number of charge cycles it has undergone and its date of manufacture. Using these parameters, the printer’s software can monitor the battery’s condition and alert the user when to recharge or remove the battery from service.

<table>
<thead>
<tr>
<th>Operating Temperature</th>
<th>Charging Temperature</th>
<th>Storage Temperature</th>
</tr>
</thead>
<tbody>
<tr>
<td>-20°C to +55°C (-4°F to 131°F)</td>
<td>0°C to +40°C (32°F to 104°F)</td>
<td>-25°C to +65°C (-13°F to 149°F)</td>
</tr>
</tbody>
</table>

The QLn Series printers will only function properly with genuine Zebra smart battery packs.
The smart battery’s health has three states: GOOD, REPLACE, and POOR. The battery health factor determines whether or not the printer can operate and what is communicated to the user via the display.

<table>
<thead>
<tr>
<th># of Charge Cycles</th>
<th>Health</th>

<td>REPLACE</td>
<td>“Warning-Battery Is Past Useful Life” *</td>
</tr>
<tr>
<td>≥600</td>
<td>POOR</td>
<td>“Replace Battery Shutting Down” **</td>
</tr>
</tbody>
</table>

* Warning accompanied by one long beep.
** Warning will flash on and off accompanied by beeping at a rate of once per second. After 30 seconds the printer will shut down.

Note • Power down the printer before removing the battery to minimize the risk of corruption.

Printing Technology

The QLn Series printers use the Direct Thermal method to print human readable text, graphics and barcodes. It incorporates a sophisticated print engine for optimal printing under all operational conditions.

Direct Thermal

Direct thermal printing uses heat to cause a chemical reaction on specially treated media. This reaction creates a dark mark wherever a heated element on the printhead comes in contact with the media. Since the printing elements are arranged very densely at 203 d.p.i. (dots per inch) horizontal and 200 d.p.i. vertical, highly legible characters and graphic elements may be created a row at a time as the media is advanced past the printhead. This technology has the advantage of simplicity, as there is no requirement for consumable supplies such as ink or toner. However, since the media is sensitive to heat, it will gradually lose legibility over long periods of time, especially if exposed to environments with relatively high temperatures.
QR Code

The QR barcode includes human readable text (URL) which links the user to printer information and short videos on topics such as buying supplies, features overview, loading media, printing a configuration report, cleaning instructions, and accessory information. (See Page 13 for each printer’s URL address.)

Made for iPhone (MFi)

QLn printers support communication with Apple devices running iOS 5 or later over a standalone Bluetooth 3.0 radio and the BT3.0 radio included with the 802.11n (dual) radio. Only printers with the “M” in the ninth digit spot of the part number support this feature, i.e. QNx-xxxxxMxx-xx.

Near Field Communication (NFC)

A passive NFC tag with the Bluetooth printer address will provide instant access to printer-specific information via an NFC-enabled smartphone.

Getting Ready to Print

Battery
Installing the Battery

**Important** • Batteries are shipped in sleep mode to preserve their maximum capacity while in storage prior to initial use. Plug in the AC adapter (see Pg. 19) or insert the battery into the Smart Charger 2 or Quad Charger (see Pg. 17) to wake it up before using for the first time.

1. Locate the battery compartment on the bottom of the printer.

2. Swivel the belt clip (if present) to access battery compartment.

3. Insert the battery into the printer as shown in Figure 1. (It is not possible to insert the pack in an incorrect orientation.)

4. Rock the battery into the compartment as shown until it locks in place.

When the battery is first installed, the control panel indicators may briefly turn on and then go off which indicates the battery is not fully charged.

---

**Figure 3: Installing the Battery (QLn220 Shown)**
Battery Safety

Caution • Avoid accidental short circuiting of any battery. Allowing battery terminals to contact conductive material will create a short circuit which could cause burns and other injuries or could start a fire.

Important • Always refer to the Important Safety Information data sheet shipped with each printer and the Technical Bulletin shipped with each battery pack. These documents detail procedures to ensure maximum reliability and safety while using this printer.

Important • Always dispose of used batteries properly. Refer to Appendix E for more battery recycling information.

Caution • Use of any charger not approved specifically by Zebra for use with its batteries could cause damage to the battery pack or the printer and will void the warranty.

Caution • Do not incinerate, disassemble, short circuit, or expose to temperatures higher than 65°C (149°F).

Charger Safety

Caution • Do not place any charger in locations where liquids or metallic objects may be dropped into the charging bays.
The Smart Charger-2 (SC2) is a charging system for use with the 2-cell and 4-cell lithium-ion smart batteries used in the QLn Series printers.

### Charging Status Indicators

The SC2 uses a LED indicator to indicate the charge state in either Green, Yellow, or Amber as detailed below.

<table>
<thead>
<tr>
<th>DC Power Input</th>
<th>Indicator</th>
<th>Battery Status</th>
</tr>
</thead>
<tbody>
<tr>
<td>Present</td>
<td>Green</td>
<td>Battery not present</td>
</tr>
<tr>
<td>Present</td>
<td>Green</td>
<td>Fully charged</td>
</tr>
<tr>
<td>Present</td>
<td>Yellow</td>
<td>Charging</td>
</tr>
<tr>
<td>Present</td>
<td>Amber</td>
<td>Fault</td>
</tr>
<tr>
<td>Present</td>
<td>Off</td>
<td>Present and Battery Health = POOR</td>
</tr>
</tbody>
</table>

There will also be a battery charging graphic to indicate that this LED is the charging status indicator 🌋.

### Battery Health Indicator

The SC2 features a tri-color (Yellow/Green/Amber) LED to indicate the health of the battery pack. An evaluation of the battery health begins upon insertion of the battery in the charger and results in the appropriate LED being illuminated as shown below. The LED will remain illuminated as long as input power is applied.

<table>
<thead>
<tr>
<th>Battery</th>
<th>Indicator</th>
<th>Health Status</th>
</tr>
</thead>
<tbody>
<tr>
<td>None or non-smart</td>
<td>Off</td>
<td>GOOD</td>
</tr>
<tr>
<td>Smart battery present</td>
<td>Green</td>
<td>GOOD</td>
</tr>
<tr>
<td>Smart battery present</td>
<td>Yellow</td>
<td>CAPACITY DIMINISHED</td>
</tr>
<tr>
<td>Smart battery present</td>
<td>Flashing yellow</td>
<td>PAST USEFUL LIFE</td>
</tr>
<tr>
<td>Smart battery present</td>
<td>Amber</td>
<td>UNUSABLE-REPLACE (discard per Instructions in Appendix E)</td>
</tr>
</tbody>
</table>

Note: For detailed information on the SC2, refer to the Smart Charger 2 User Guide (p/n P1040985-001).
The UCLI72-4 Quad Charger is designed to charge up to four (4) QLn Series battery packs simultaneously. Batteries must be removed from the printer to be charged in the Quad Charger.

1. Ensure that the charger has been installed properly per the Quad Charger instruction manual. Ensure that the power indicator on the front panel is on.

2. Plug a battery pack into any one of the four charging bays as shown in Figure 3, noting the orientation of the battery pack. Slide the battery pack into the charging bay until it stops and then rock the battery pack back until it snaps into place. The amber indicator directly under the battery being charged will turn on if the battery is properly inserted.
The indicators under the battery will allow you to monitor the charging process per the table below:

<table>
<thead>
<tr>
<th>Amber</th>
<th>Green</th>
<th>Battery Status</th>
</tr>
</thead>
<tbody>
<tr>
<td>On</td>
<td>Off</td>
<td>Charging</td>
</tr>
<tr>
<td>On</td>
<td>Flashing</td>
<td>80% charged (O.K. to use)</td>
</tr>
<tr>
<td>Off</td>
<td>On</td>
<td>Completely Charged</td>
</tr>
<tr>
<td>Flashing</td>
<td>Off</td>
<td>Fault-Replace Battery</td>
</tr>
</tbody>
</table>

**Important** • A fault condition is caused by a problem with the battery. The charger may indicate a fault because the battery is too hot or cold to charge reliably. Try to charge the battery again when it returns to the room’s ambient temperature. If the amber indicator starts flashing on the second attempt, the battery should be discarded. Always dispose of batteries in a proper manner as described in Appendix F.

**Figure 3: Quad Charger**

1. Slide Battery Pack into Charger bay.
2. Rock Battery Pack into place.

**Quad Charger Cycle Times:**

<table>
<thead>
<tr>
<th>Battery Status</th>
<th>Standard Pack</th>
<th>Extended Pack</th>
</tr>
</thead>
<tbody>
<tr>
<td>Battery 80% Charged</td>
<td>&lt;2 Hrs.</td>
<td>&lt;4 Hrs.</td>
</tr>
<tr>
<td>Battery Fully Charged</td>
<td>&lt; 3 Hrs.</td>
<td>&lt;5 Hrs.</td>
</tr>
</tbody>
</table>

**Note** • These times are for completely discharged batteries.
Battery packs which are only partially discharged will take less time to reach their charged state. Batteries which have reached 80% of their charge capacity may be used, however, it is recommended that you allow the batteries to reach a full charge to maintain maximum battery life.

The UCLI72-4 Quad Charger has a safety feature which stops charging a battery after six hours regardless of its charge state. If not fully charged, it might be indicative of a battery that needs to be replaced.

Use care when installing the UCLI72-4 Quad Charger so that you do not block the ventilating slots on the top and bottom covers. Ensure that the charger is plugged into a power source which will not accidently be turned off if you will be charging batteries overnight.

AC Power Adapter (p/n P1031365-024)

Figure 4: Charging the Battery Pack with the AC Power Adapter
• Open the protective cover on the printer to expose the DC input charger jack.
• Connect the appropriate AC power cord for your location to the adapter and then plug the power cord into an AC receptacle.
• Plug the barrel plug from the AC adapter into the charger jack on the printer.
• The printer will power up and begin charging. The printer can be left on or turned off at this point. Charging will continue in either state.

**Note** • Batteries are shipped in sleep mode to preserve their maximum capacity while in storage prior to initial use. Plug in the AC adapter (see Pg. 19) or insert the battery into the Smart Charger 2 or Quad Charger (see Pg. 17) to wake it up before using for the first time.

**Warning** • While it’s possible to charge the battery when using the printer, charge times will increase under this condition.

**Ethernet and Charging Cradles**

The cradle is an expansion base intended for use with the QLn Series printers. There is a four bay cradle (QLn-EC4) or a single bay option (QLn-EC) for use with the QLn220 and 320, as shown on pages 23 and 24. There is also a single bay Ethernet and charging option for the QLn420 (QLn420-EC) as shown on page 24.

The QLn-EC/EC4 cradles provide charging power to the docked printer as well as providing a standard 10/100Mb/S Ethernet port for communication to the printer. The QLn420-EC also provides charging power to the docked printer, as well as a standard 10/100Mb/T Ethernet port for communication to the printer. All cradles also supply battery charging power to the docked printer and acts as a supplementary power source for a functioning QLn printer.

All QLn Ethernet cradles feature two LED’s to indicate the status of the cradle: Solid green to indicate when power is provided to the input of the cradle; and blinking green to indicate Ethernet activity.

The cradle allows the user to dock the printer easily and remove it with the push of a button. The printer shall remain
operable while docked, i.e. display is viewable, charge LED status is viewable, and printer controls and data entry are available. The printer will still print while docked and the user shall be able to replace the media as well.

<table>
<thead>
<tr>
<th>LED Status</th>
<th>Indication</th>
</tr>
</thead>
<tbody>
<tr>
<td>Solid Green</td>
<td>Power On</td>
</tr>
<tr>
<td>Blinking Green</td>
<td>Ethernet Activity</td>
</tr>
</tbody>
</table>

**Note** • Remove the “Docking Cradle Access” label on the bottom of the QLn320 or QLn220 printers before docking the printer in the cradle.

**Note** • Clean the docking contacts with a Zebra cleaning pen to remove any residue left behind by the label.

The QLn420 does not use the above label over the docking contacts, but instead includes a plastic docking contacts cover secured by two screws. Remove the screws to remove the docking contacts cover from the printer and expose the docking contacts (as shown below).

</tbody>
</table>

Figure 7: Ethernet Cradle (QLn420)
Printer Operation with Cradle

- All QLn Series printers will charge when placed in their supported cradles.
- Only QLn Series printers that have the Ethernet option installed will connect to an Ethernet network. Check the PCC code on the back of the printer (see Appendix D for location). Codes of the form QNx-xxxxx0xx-xx do not support Ethernet, and codes of the form QNxxxxxxxExx-xx or QNx-xxxxxMxx-xx do support Ethernet (where “x” means don’t care). You can also check the “Communications” sub-menu on the LCD (see Main Menu Screen on page 38). After selecting this sub-menu, any communication options not installed will be so indicated.
- When power is applied to the cradle and the printer is docked, the printer charge LED indicates the charge status of the printer (see Figure 18).
- Docking the printer in the cradle will automatically turn the printer on to ensure it is available to be managed remotely.
- When the printer detects input power from the cradle, and the presence of a live Ethernet link, it will automatically reboot and connect to the Ethernet network.
- For printers with an 802.11 radio, this interface will be turned off when the Ethernet link is active. It will turn back on if the Ethernet link is no longer active.
- For printers with a Bluetooth radio, this interface will remain active while the printer is in the cradle.
- The serial and USB ports will remain active while the printer is in the cradle.
- The DC input barrel jack connector (see Figure 7) cannot be used while the printer is in the cradle. The DC barrel jack should be plugged directly into the cradle instead.

Note • The printer provide over voltage protection such that no damage occurs when voltages from 0-36V are applied at the DC Power jack. Upon application of voltage greater than 36V, the DC line fuse will permanently open to reduce fire hazard. The battery is only charged when 12VDC is applied using the Zebra AC adapter.
Loading the Media in the QLn Series Printers

You can operate QLn Series printers in one of two different modes: Tear-Off or Peel-Off. Tear-Off mode allows you to tear off each label (or a strip of labels) after it is printed. In Peel-Off mode, the backing material is peeled away from the label as it is printed. After you remove this label, the next one is printed.

**Loading Media Procedure**

1. Open the printer (Refer to Figure 7).
   - Press the Media Cover Button on the side of the printer as shown in “1” below. The Media Cover will open automatically.
   - Rotate the Media Cover back completely as shown in “2”, exposing the media compartment and adjustable media supports.

**Figure 8: Opening the Printer**
2. Pull the media supports apart as shown in Figure below. Insert the roll of media (in the orientation shown) between the supports and let the supports secure the media in place. The supports will adjust themselves to the width of the media, and the media roll should be able to spin freely on the supports.

**Figure 9: Loading Media**

3. If you plan to use the printer in tear-off mode, close the media cover as shown below.

**Note** • Please refer to the Programming Guide (P1012728-xxx) for information on changing the setting to adjust the media feed length via a Set-Get-Do (SGD).
Loading Media in Peel-off Mode (QLn220/320)

- If you plan to use the printer in the peel-off mode, peel a few labels off of the media and load the media as previously described.
- Push the peeler lever forward to release the peeler bail into the “up” position as shown at “3” and “4” in Figure 10.
- Close the media cover to lock the peeler bail in place. The media will feed between the peeler bail and platen.

• Turn on the printer or press the Feed button on the front of the printer if the printer is already on. The printer will advance the media to the next label, if printing labels. If you are printing on journal media, the printer will advance a short strip of media.

To disengage the peeler bail, first open the media cover as previously described. The peeler bail will automatically return to the Up position.

Press straight down on the peeler bail to lock it in place in its original home position.

Figure 10: Activating Peeler Bar (QLn320 Shown)
Loading Media in Peel-off Mode (QLn420)

- If you plan to use the printer in the peel-off mode, peel a few labels off of the media and load the media as previously described.
- Close the media cover.
- Lift up on the peeler lever located on the side of the printer below the media cover button.
- Lock the peeler lever in the “up” position to fully engage the peeler bail.

**Figure 11: Activating Peeler Bar (QLn420 Shown)**

- Turn on the printer or press the Feed button on the front of the printer if the printer is already on. The printer will advance the media to the next label, if printing labels. If you are printing on journal media, the printer will advance a short strip of media.

*Note* • Peeler will not work with most synthetic label stock since that media is softer and tends to adhere to its liner. However, the QLn420 printer is fully capable of printing on synthetic labels.
• To disengage the peeler bail, press the peeler release while pressing straight down on the peeler lever. This will disengage the peeler bail and return it to its original home position.

Note • Before disengaging the peeler, be sure there are no peeled labels present on the peeler bail. This could cause a label jam if you were to disengage with the peeled label present.

QLn Healthcare Printers
Zebra QLn Healthcare 2” and 3” printers are designed to meet the specific and unique needs of the healthcare environment. The healthcare application is based on the QLn220 and QLn320 printers primarily for barcode label printing, but also retaining the QLn’s ability to print receipts.

The QLn220 and 320 Healthcare printers also offer a few key enhancements to these existing printers:
• Provide printers with distinctive gray and white healthcare colors (see Page 32) and performance plastics that can also be disinfected with the most common cleaners used in hospitals.
• Leverage the technology advancements made on the QLn platform, i.e. new User Interface, NFC, QR code.
• Add the MFi chip to the QLn main logic board to support Bluetooth connectivity between the printer and an iOS device as Apple devices are expected to grow in popularity in this segment.
Since the QLn220 and 320 Healthcare are based on the QLn220 and 320 platform, they are designed to be direct thermal printers which support variable print widths. They will provide a print experience compatible to the QLn220 and 320, specifically in the following areas:

- They will support the same barcodes, barcode quality, and visual print quality.
- They will offer equal wireless performance in terms of range, reliability, and speed.
- They will be compatible with all QLn220 and 320 accessories.

Due to the nature of the healthcare environment, QLn Healthcare printers feature more rugged plastics designed and tested to withstand constant cleaning with all major hospital cleaners for the life of the printer.

**Note** • Refer to the Guide to Disinfecting and Cleaning QLn Healthcare Printers (P1066640-001) for detailed cleaning instructions.

**Note** • Refer to the QLn Healthcare Printers Quick Start Guide (P1067208-001) for more detailed information on these printers.
Operator Controls
The QLn Series printers come equipped with a keypad control panel and LCD graphical user interface. The standard control panel is illustrated in Figure 13, 13a, and 14. The LCD interface allows easy display and selection of many printer functions as detailed on following pages.

Standard Control Panel
The standard control panel has multiple control buttons and two multipurpose indicators.
• The Power Button turns the printer on and off.

Note: When turning on the QLn420 printer, press and hold the Power Button between 1.5 and 2.5 seconds. When the LCD illuminates, release the Power Button. To turn off the printer, press and hold the Power Button until the printer shuts down.

• The Media Feed Button advances a length of media which is determined by the type of media being used. Label media will be advanced to the next gap or bar sense marker. Journal (plain) media will be advanced by a length determined by the printer’s software.
• The LED Charge Indicator shows solid Yellow when charging, solid Green when fully charged, and is turned off when there’s a fault condition and the printer is plugged in.
• Four Way Navigation Buttons allow the user to scroll between functions on the LCD user space. (The Navigation Buttons do not apply to the Status Bar and Navigation Bar.)
• Enter Button allows the user to select the desired function highlighted on the LCD interface and is indicated by the word “OK”.
• Two software defined function keys allow the user to select a function listed on the navigation bar.
Figure 13: Standard Control Panel (QLn320/220)

Power Button
Press to turn unit on. There will be a 10 second boot up time.
Press again to turn unit off

Feed Button
Press to advance a blank label or a software determined length of journal media.

LED Charge Indicator
Solid Yellow: Charging
Solid Green: Fully charged
Off: No DC Power Applied
Off: With DC Power Applied: Charge Fault

Figure 13a: Standard Control Panel (QLn420)

Press again to turn unit off

Feed Button
Press to advance a blank label or a software determined length of journal media.

LED Charge Indicator
Solid Yellow: Charging
Solid Green: Fully charged
Off: No DC Power Applied
Off: With DC Power Applied: Charge Fault
LCD Control Panel

The 240x128 pixel LCD control panel allows the user to view the status of the QLn Series printer and have access to various printer alerts and messages. It also has multi-directional keys which allow navigation and selection of menu options affecting printer functions. These keys allow scrolling through the various options and settings. The “OK” button allows selection of the option or function displayed on the screen.

The top of the screen has a row of status icons, or a Status Bar, which indicate the state of various printer functions. The Status Bar is located above the Status Screen shown below along with a Navigation Bar. The Status Screen is the default display and is shown at power up. When navigating the menus, the printer will automatically return to this screen when the user is done navigating after an appropriate delay.

Figure 14: LCD Control Panel (QLn320/220)
Status Bar Icons

Indicates Bluetooth® connection status. The icon will blink to show that the printer is receiving label data via Bluetooth, and is solid when link is established. This icon appears only on printers with the Bluetooth wireless option installed.

Indicates that the printer is connected to a radio network via 802.11 protocols. The antenna icon will blink with no parentheses when looking for an access point. One set of solid parentheses with blinking antenna indicates WLAN is associated and attempting authentication. Two sets of solid parentheses and solid antenna indicate the printer is successfully connected to the WLAN. The icon and two parentheses will blink to show the printer is receiving printer data via WLAN. The four (4) bars indicate the strength of the WLAN connection to the access point. These icons appear only with the 802.11 radio installed.

The Ethernet icon will blink when the printer is receiving label data via the Ethernet connection. It will not be displayed on the status bar when the Ethernet is inactive. This icon appears only when the Ethernet option is installed and the printer is docked in Ethernet cradle.

The Data icon indicates data being sent to the printer, i.e. the icon will blink when there is a label data transmission via the serial or USB ports.

The Media Out icon will blink when there is no media in the printer and will not blink when there is media in the printer.

The Head Latch icon indicates if the media cover is closed or not properly latched. It will appear unlocked and blinking if open and will not appear if the cover is closed.
The Error icon will be displayed and blink if an error condition exists. The icon will not be displayed if no printer error exists. Since there are separate icons for Media Out and Head Latch Open, these two alerts do not apply to the Error icon.

The Battery Charge Level icon indicates the reported state of charge from the battery pack. In a non-charging state, four (4) bars indicates the battery level is greater than 80%. Three (3) bars indicates if the battery level is less than or equal to 80% but greater than 60%. Two (2) bars indicates if the level is less than or equal to 60% but greater than 40%. One (1) bar indicates if the battery level is less than or equal to 40% but greater than 20%. And zero (0) bars indicates if the level is less than or equal to 20%.

While the battery is charging, a lightning bolt will appear in the battery icon to indicate that charging is taking place. When the battery is charging and fully charged, four bars will be displayed. When the battery is charging and the level is greater than 80%, the battery icon will alternate between four bars and three bars. When the battery is charging and the level is less than or equal to 80% but greater than 60%, the icon will alternate between three bars and two bars. When the battery is charging and the level is less than or equal to 60% but greater than 40%, the icon will alternate between two bars and one bar. When the battery is charging and the level is less than or equal to 40% the icon will alternate between one bar and zero bars.
Main Menu Screen (QLn320/220)

The user can select options on the Main Menu screen by pressing the soft key located beneath the Menu option on the navigation bar. The Main Menu screen displays graphical options including Communication, Display, Media, Settings, Battery, and Help.

**Note** • The QLn Healthcare printers feature a different menu system. See Page 40 for details.

The user can scroll between icons using the four-way arrow buttons. When an icon is highlighted, its text description will be displayed in the middle of the navigation bar, and can be selected by pressing the “OK” button. This will take the user to the screen with status information specific to that option. The Info (or Help) menu provides useful information on a variety of topics. Please explore this menu to become more familiar with your printer and how it operates.

The QLn Series printers will also display various alerts, such as “Media Out”, “Media Cover Open”, or “Battery Low”. The user can respond to questions by pressing one of the soft keys to indicate that an action has been taken to address the alert in question. Once the condition causing the alert has been addressed (i.e. loading media), the alert message will be cleared. (See Appendix H for a complete list of alerts for the QLn Series printers.)
Programmable LCD Settings

In addition to the status icons, the LCD control panel can display other printer settings and functions as text. Applications can be written to allow the user to view and/or modify these settings using the scroll and select keys on the display. The menu that comes with the printer provides access to the most commonly used parameters. Refer to the Programming Guide (p/n P1012728-008) for a complete list of the parameters, and for details on how to change the front panel display at www.zebra.com/manuals).

The LCD backlighting option allows viewing of the screen in a dark environment, or provides better contrast in a very bright environment. The QLn320 and QLn220 can be programmed to enter a low power mode (Backlight Off) during periods of front panel inactivity. While in low power mode, the screen is populated with menus and status icons, data which may or may not be readable depending on ambient light conditions. The QLn Series printers provide a configurable time delay from the time the backlight is turned on to when it turns off. The time range for this delay is 5 to 1200 seconds with a default time of 10 seconds. The backlight can be activated within one second after any of the cursor, select, or soft keys is pressed. (The feed button does not activate the backlight.) The status bar icons, the user space content, and the navigation bar will remain on the screen with the backlight off. Extensive use of the display backlight will decrease the time the printer can run between charges. Refer to the section “Extending Battery Life” for more information.
Home Menu Screen (QLn420 and QLn Healthcare Printers)

The QLn420 and QLn Healthcare printers share the same control panel. The printer’s control panel includes a display where the user can view the printer’s status or change its operating parameters. After the printer completes the power-up sequence, it moves to the Idle Display screen (Figure 21). This screen includes the printer’s current status, information such as firmware version and IP address, and a Home menu shortcut.

The Home Menu for the printer uses a different set of icons than the standard QLn320 and QLn220, uses larger fonts for enhanced readability, and also provides support for multiple languages. The Home Menu screen displays graphical parameter options including Settings, Tools, Network, Battery, Language, Sensors, Ports, and Bluetooth (as shown in Figure 22). These options allow the user to view the printer’s status or change its operating parameters.

The printer’s operating parameters are sorted into eight (8) user menus, which you can access through the printer’s Home menu (Figure 22). Click on the Home icon located on the Idle Display screen to proceed to the Home Menu.

The user can scroll between icons using the four-way arrow buttons. When an icon is highlighted, its text description will be displayed in the middle of the navigation bar, and can be selected by pressing the “OK” button. This will take the user to the screen with status information specific to that option.

Whereas the QLn320 and 220 printers have multiple line items per screen, the QLn420 and QLn Healthcare printers display one setting per screen using larger fonts (as shown below). In order to navigate to the next setting, click on the right arrow button. Click on the soft key below the Home icon to return to the Home Menu screen to choose a different parameter.

Some parameter settings have a scroll option to view multiple setting choices. This option is identifiable by the presence of up and down arrows located on either side of the display (Figure 24). For example, the Tools parameter has a Help option for many printer functions such as media, battery icon, error icon, latch icon, media icon, receive data icon, ethernet icon, signal icon, WLAN icon, Bluetooth icon, power LED, printhead, and battery.
Press the up and down arrows on the keypad to scroll through a setting’s various options. Press the left and right arrows to scroll to the next setting.

**Figure 19: Scroll Option (Help Settings)**

Press the soft key beneath the “GET HELP” command on the display in this example to receive basic help information for loading media in the printer (Figure 20).

**Figure 20: Scroll Details (Help For Media)**

Press the soft key beneath “BACK” to return to the previous screen.
Verify the Printer is Working

Before you connect the printer to your computer or portable data terminal, make sure that the printer is in proper working order. You can do this by printing a configuration label using the “two key” method. If you can’t get this label to print, refer to “Troubleshooting”.

Printing a Configuration Label

1. Turn the printer off. Load the media compartment with journal media (media with no black bars printed on the back)
2. Press and hold the Feed Button.
3. Press and release the Power button and keep the Feed button pressed. When printing starts, release the Feed button. The unit will print a line of interlocking “x” characters to ensure all elements of the print head are working, print out the version of software loaded in the printer and then print the report.

Note that the report can also be printed from the Info (Help) menu on the LCD.

The report indicates model, serial number, baud rate, and more detailed information on the printer’s configuration and parameter settings. (See the Troubleshooting Section for sample printouts and a further discussion on how to use the configuration label as a diagnostic tool.)
Connecting the Printer
The printer must establish communications with a host terminal which sends the data to be printed. Communications occur in four basic ways:

• QLn Series printers can communicate by cable via either RS-232C or USB 2.0 protocols. USB drivers are included in the Zebra Designer Driver which can be downloaded from www.zebra.com/drivers.
• By means of a wireless LAN (Local Area Network) per 802.11 specifications. (Optional)
• By means of the Ethernet when docked on the Ethernet cradle. (Optional)
• By means of a Bluetooth short range radio frequency link. (Optional)
• WinMobile®, Blackberry®, and Android® devices use standard Bluetooth protocol.
• QLn Series printers are compatible with iOS devices, therefore printing via Bluetooth to an Apple® device is possible.
Cable Communication

**Caution • The printer should be turned off before connecting or disconnecting a communications cable.**

The QLn Series printers can communicate by cable; the specific cable supplied with your printer will vary with the host terminal and your model printer.

**RS-232C Communications**

The 14-pin serial connector on your communications cable plugs into the serial communications port on the side of the printer. QLn Series printers also have a USB port.

**USB Communications**

The small 5-pin connector on the USB cable plugs into the printer. The connectors are keyed to assure correct alignment; do not try to force the cable if it does not plug in.

**Figure 21: Communication Options (QLn320 Shown)**

Communications Port

Communications Cable to Terminal. Part #'s vary. Refer to Appendix A.

RS-232C or USB Communications Cable to Computer. (Refer to Appendix A for part #'s.)
The other end of the cable must be plugged into the host terminal as shown in Figure 21, or to a serial or USB port on a computer (Figure 21). The QLn Series is configured with the USB Open HCl interface driver allowing it to communicate with Windows® based devices.

USB drivers are included in the Zebra Designer Driver which can be downloaded from the Zebra Web site. Other terminals or communications devices may require the installation of special drivers to use the USB connection. Consult the factory for further details.

**Providing Strain Relief for Communications Cable**

If you are connecting either a USB or RS-232 communications cable to the printer permanently, access the communications port on the side of the printer next to the latch release lever. Plug the connector into the appropriate port and align the plastic locking cap with the cut outs shown below. Rotate the locking cap clockwise to lock the cable in place. (Turn counter clockwise to unlock the cable.) Once locked in place, this provides strain relief for the cable and will prevent the cable from disconnecting from the printer.

---

**Note** • Only one cable can be present in the USB/RS-232 communications port at a time for strain relief purposes.
Figure 23: Communications Port Strain Relief (QLn420 Shown)

Rotate locking cap in a clockwise direction to lock cable in place.
Wireless Communications with Bluetooth

Bluetooth is a worldwide standard for the exchange of data between two devices via radio frequencies. This form of point-to-point communication does not require access points or other infrastructure. Bluetooth radios are relatively low powered to help prevent interference with other devices running at similar radio frequencies. This limits the range of a Bluetooth device to about 10 meters (32 feet). Both the printer and the device it communicates with must follow the Bluetooth standard. Other than conditions specified elsewhere in this manual, only one of the radio options can be installed in the printer at one time and the antenna used for these transmitters must not be co-located or must not operate in conjunction with any other antenna.

Bluetooth Networking Overview

Each Bluetooth enabled QLn Series printer is identified by a unique Bluetooth Device Address (BDADDR). This address resembles a MAC address whereby the first three bytes are vendor, and the last three bytes are device (e.g. 00:22:58:3C:B8:CB). This address is labeled on the back of the printer via a barcode for ease of pairing. (See Page 34.) In order to exchange data, two Bluetooth enabled devices must establish a connection.

Bluetooth software is always running in the background, ready to respond to connection requests. One device (known as the master or the client) must request/initiate a connection with another. The second device (the slave or the server) then accepts or rejects the connection. A Bluetooth enabled QLn Series printer will normally act as a slave creating a miniature network with the terminal sometimes referred to as a “piconet”.

Discovery identifies Bluetooth devices that are available for pairing whereby the master device broadcasts a discovery request and devices respond. If a device is not discoverable, the master cannot pair unless it knows the BDADDR or has previously paired with the device.

Bluetooth 2.1 or higher uses Security Level 4 Secure Simple Pairing (SSP), a mandatory security architecture that features four (4) association models: Numeric Comparison, Passkey Entry, Just Works (no user confirmation), and Out of Band (pairing info transmitted OOB, e.g. via Near Field Communication).
Security Mode 1
If a BT ≥ 2.1 device is pairing with a BT ≤ 2.0 device, it falls back to BT 2.0 compatibility mode and behaves the same as BT 2.0. If both devices are BT ≥ 2.1, Secure Simple Pairing must be used according to the BT spec.

Security Mode 2
If a BT ≥ 2.1 device is pairing with a BT ≤ 2.0 device, it falls back to BT 2.0 compatibility mode and behaves the same as BT 2.0. If both devices are BT ≥ 2.1, Secure Simple Pairing must be used according to the BT spec.

Security Mode 3
If a BT ≥ 2.1 device is pairing with a BT ≤ 2.0 device, it falls back to BT 2.0 compatibility mode and behaves the same as BT 2.0. If both devices are BT ≥ 2.1, Secure Simple Pairing must be used according to the BT spec.

Security Mode 4: Simple Secure Pairing
Simple Secure Pairing: a new security architecture introduced supported in BT ≥ 2.1. Service-level enforced, similar to mode 2. Mandatory when both devices are BT ≥ 2.1. There are four association models currently supported by mode 4. Security requirements for services must be classified as one of the following: authenticated link key required, unauthenticated link key required, or no security required. SSP improves security through the addition of ECDH public key cryptography for protection against passive eavesdropping and man-in-the-middle (MITM) attacks during pairing.

<table>
<thead>
<tr>
<th>Numeric Comparison</th>
<th>Passkey Entry</th>
<th>Just Works</th>
<th>Out of Band (OOB)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Designed for situation where both devices are capable of displaying a six-digit number and allowing user to enter &quot;yes&quot; or &quot;no&quot; response. During pairing, user enters &quot;yes&quot; if number displayed on both devices matches to complete pairing. Differs from the use of PINs in legacy (BT &lt; = 2.0) pairing because the number displayed for comparison is not used for subsequent link key generation, so even if it is viewed or captured by an attacker, it could not be used to determine the resulting link or encryption key.</td>
<td>Designed for situation where one device has input capability but no display (e.g. keyboard), while other device has a display. The device with a display shows a six-digit number, then the user enters this key on the device with input. As with numeric comparison, the six-digit number is not used in link key generation.</td>
<td>Designed for situation where one (or both) of the pairing devices has neither a display nor keyboard for entering digits (e.g. Bluetooth headset). It performs authentication step 1 in the same manner as a numeric comparison, but the user cannot verify that both values match, so MITM (man-in-the-middle) protection is not provided. This is the only model in SSP that does not provide authenticated link keys.</td>
<td>Designed for devices that support a wireless technology other than Bluetooth (e.g. NFC) for the purposes of device discovery and cryptographic value exchange. In the case of NFC, the OOB model allows devices to pair securely by simply tapping one device against the other, followed by the user accepting the pairing via a single button push. Security against eavesdropping and MITM attacks is dependant on the OOB technology.</td>
</tr>
</tbody>
</table>

Each mode, except for Just Works, has Man-In-The-Middle (MITM) protection, meaning no third device can view the data being passed between the two devices involved. The SSP mode is usually negotiated automatically based on the capabilities of both the master and slave. Lower security modes can be disabled via the `bluetooth.minimum_security_mode` SGD. The `bluetooth.minimum_security_mode` SGD sets the lowest security level at which the printer will establish a Bluetooth connection. The printer will always connect at a higher security level if requested by the master device. To change the security mode and security settings in the QLn Series printers, use Zebra Setup Utilities.
The QLn Series printers also feature bonding for Bluetooth. The printer caches pairing info so devices stay paired through power cycles and disconnects. This eliminates the need to re-pair on every connection establishment.

The `bluetooth.bonding` SGD is on by default.

In addition, the QLn Series printers support Near Field Communication (NFC) technology. Using the “Print Touch” feature located on the side of the printer, end-users can automatically connect via Bluetooth from a handheld device that supports NFC technology. The NFC tag has the printer’s BDADDR encoded in a URL on the tag. Simply touching the NFC handheld device to the “Print Touch” icon on the printer will connect and pair the handheld device to the printer.
WLAN Overview

QLn Series printers can be equipped with a radio that uses the industry standard 802.11 protocols. They will have the FCC ID number on the serial number label on the back of the unit.

• QLn Series Wireless Network Printers with the Zebra 802.11 WLAN radio module can be identified by the text “Wireless Network Printer” on the serial number label on the back of the printer.

• These printers allow communication as a node within a wireless local area network (WLAN). Methods of establishing communications to the printer will vary with each application.

More information and LAN configuration utilities are included in the Zebra Net Bridge™ program (version 2.8 and later). Zebra Setup Utilities (ZSU) can also be used to configure WLAN communications settings. Both Net Bridge and ZSU may be downloaded from the Zebra Web site.

Setting Up the Software

QLn Series printers use Zebra’s CPCL and ZPL Programming languages which were designed for mobile printing applications. CPCL and ZPL are fully described in the ZPL Programming Guide (p/n P1012728-008) available on-line at www.zebra.com/manuals.

You can also use Designer Pro, Zebra’s Windows® based label creation program which uses a graphical interface to create and edit labels in either language.

Refer to Appendix F for tips on downloading the Designer Pro application from Zebra’s Web site.
Setting Up the Software

QLn Series printers use Zebra’s CPCL and ZPL Programming languages which were designed for mobile printing applications. CPCL and ZPL are fully described in the ZPL Programming Guide (p/n P1012728-008) available on-line at www.zebra.com/manuals.

You can also use Designer Pro, Zebra’s Windows® based label creation program which uses a graphical interface to create and edit labels in either language.

Refer to Appendix G for tips on downloading the Designer Pro application from Zebra’s Web site.

Near Field Communication (NFC)

Much like Bluetooth and Wi-Fi technologies, Near Field Communication (NFC) allows wireless communication and data exchange between digital devices like smartphones. Yet NFC utilizes electromagnetic radio fields while technologies such as Bluetooth and Wi-Fi focus on radio transmissions instead.

NFC is an offshoot of Radio Frequency Identification (RFID), with the exception that NFC is designed for use by devices within close proximity to each other, i.e. a smartphone and a QLn Series printer. NFC allows these devices to establish communication with each other by touching them together or bringing them into proximity, usually no more than 7.62 centimeters (3 inches). Three forms of NFC technology exist: Type A, Type B, and FeliCa. All are similar but communicate in slightly different ways. FeliCa is commonly found in Japan.

Devices using NFC may be active or passive. A passive device, such as a QLn Series printer with an NFC tag, contains information that other devices can read but does not read any information itself.

An active device, such as a smartphone, can read the information on the printer’s NFC tag, but the tag itself does nothing except transmit the info to authorized devices.
Active devices can read information and send it. An active NFC device, like a smartphone, would not only be able to collect information from NFC tags, but it would also be able to exchange information with other compatible phones or devices. An active device could even alter the information on the NFC tag if authorized to make such changes. To ensure security, NFC often establishes a secure channel and uses encryption when sending sensitive information.

Figure 26: Near Field Communication (NFC) Pairing

http://www.zebra.com/nfc

Note • Tapping the Zebra Print Touch™ icon with a Near Field Communication (NFC) enabled smartphone will provide instant access to printer-specific information. For more information about NFC and Zebra products, go to http://www.zebra.com/nfc. Bluetooth pairing applications via NFC is also possible. Please see Zebra Multi-platform SDK for more information.
QLn Series Accessories

Swivel Belt Clip

Most QLn Series printers have a plastic swivel belt clip installed as a standard feature. (It should be noted that QLn220 & 320 printers with extended capacity battery do not come equipped with a belt clip.) To use: hook the clip over your belt, and ensure that the clip is securely attached to the belt. The belt clip will pivot to allow you to move freely while wearing the printer. The QLn420 also provides a more rigid metal belt clip as an option.

In order to install or remove the plastic Belt Clip you will need to remove the battery pack.

Figure 27: Using the Belt Clip (QLn420 Shown)
Soft Case
QLn Series printers have soft case options that also allow you to carry the printer from your belt. The QLn420 soft case can be ordered through accessory kit number P1050667-017, the QLn320 is P1031365-029, and the QLn220 accessory kit is P1031365-044.

Figure 28: Using the Soft Case

Hard Case
The QLn420 printer has a two piece hard case option that also allows you to carry the printer from your belt, while also providing increased protection for the printer. It pivots via a hinge located on the back and snaps into place in front as shown above. The metal belt clip is mounted to the hard case and printer with two screws. If no belt clip is used, two shorter screws are used to hold the printer to the hard case.

Figure 29: Using the QLn420 Hard Case
1. Insert the end of the shoulder strap behind the post on the front side of the printer and loop it around the post.

2. Slide the end of the strap under the plastic buckle (circled).

3. Slide the end of the strap under the opposite side of the plastic buckle (as shown). Pull to tighten the strap inside the buckle.

4. Repeat the same steps on the opposite side of the printer.
**Hand Strap**

The QLn Series hand strap accessory (p/n P1031365-027) attaches to the printer’s cut-outs as does the shoulder strap to provide the user with a convenient and secure method of carrying the printer. To attach the hand strap to the printer:

- Insert the end of the strap through the cut out on the front of the printer as shown below.
- Loop the end of the strap back around the cut out and secure it over the button.
- Repeat this process for the opposite end of the strap.

![Figure 31: Hand Strap (QLn420 Shown)](image)

The QLn Series printers also feature two mounting holes on the base of the printer to accommodate future mounting options. Refer to RAM Mount Installation Procedure (p/n AA17518-003) on zebra.com.
Preventive Maintenance

Extending Battery Life

- Never expose the battery to direct sunlight or temperatures over 40° C (104° F) when charging.
- Always use a Zebra charger designed specifically for Lithium-Ion batteries. Use of any other kind of charger may damage the battery.
- Use the correct media for your printing requirements. An authorized Zebra re-seller can help you determine the optimum media for your application.
- If you print the same text or graphic on every label, consider using a pre-printed label.
- Choose the correct print darkness, and print speed for your media.
- Use software handshaking (XON/XOFF) whenever possible.
- Remove the battery if the printer won’t be used for a day or more and you’re not performing a maintenance charge.
- Consider purchasing an extra battery.
- Remember that any rechargeable battery will lose its ability to maintain a charge over time. It can only be recharged a finite number of times before it must be replaced. Always dispose of batteries properly. Refer to Appendix E for more information on battery disposal.

General Cleaning Instructions

⚠️ Caution • Avoid possible personal injury or damage to the printer. Never insert any pointed or sharp objects into the printer. Always turn off the printer before performing any cleaning procedures. Use care when working near the tear bars as the edges are very sharp.

⚠⚠ Warning • The printhead can get very hot after prolonged printing. Allow it to cool off before attempting any cleaning procedures.

⚠️ Only use a Zebra cleaning pen (not supplied with the printer) or a cotton swab with 90% medical grade alcohol for cleaning the printhead.

⚠️ Caution • Use only cleaning agents specified in the following tables. Zebra Technologies Corporation will not be responsible for damage caused by any other cleaning materials used on this printer.
## QLn Series Cleaning

<table>
<thead>
<tr>
<th>Area</th>
<th>Method</th>
<th>Interval</th>
</tr>
</thead>
<tbody>
<tr>
<td>Printhead</td>
<td>Use a Zebra cleaning pen to swab the thin gray line on the printhead, cleaning the print elements from the center to the outside edges of the printhead.</td>
<td>After every five rolls of media (or more often, if needed). When using linerless type media, cleaning is required after every roll of media.</td>
</tr>
<tr>
<td>Platen Surface (Linered)</td>
<td>Rotate the platen roller and clean it thoroughly with a fiber-free swab, or lint free, clean, damp cloth lightly moistened with medical grade alcohol (90% pure or better) (Fig. 32a/Fig. 32b).</td>
<td>After every five rolls of media (or more often, if needed)</td>
</tr>
<tr>
<td>Platen Surface (Linerless)</td>
<td>Rotate platen roller and clean with a fiber-free swab and 1 part liquid soap (Palmolive or Dawn) and 25 parts water. Use pure water to clean after soap/water mixture.</td>
<td>Clean platen only if there is an issue during printing, i.e. media not releasing from the platen. (*See Note below.)</td>
</tr>
<tr>
<td>Scraper (Linerless Units Only)</td>
<td>Use adhesive side of media to clean scraper on linerless units. (Fig. 32b)</td>
<td>After every five rolls of media (or more often, if needed).</td>
</tr>
<tr>
<td>Tear Bar</td>
<td>Clean thoroughly with 90% medical grade alcohol and a cotton swab. (Fig. 32a)</td>
<td>As needed</td>
</tr>
<tr>
<td>Printer Exterior</td>
<td>Water-dampened cloth or 90% medical grade alcohol wipe.</td>
<td>As needed</td>
</tr>
<tr>
<td>Printer Interior</td>
<td>Gently brush out printer. Ensure the Bar Sensor and Gap Sensor windows are free of dust. (Fig. 32a)</td>
<td>As needed</td>
</tr>
<tr>
<td>Interior of units with Linerless Platens</td>
<td>Clean thoroughly with 90% medical grade alcohol and a fiber-free swab. (See Fig. 32b for specific target areas for interior cleaning.)</td>
<td>After every five rolls of media (or more often, if needed).</td>
</tr>
</tbody>
</table>

### Note:
This is an emergency procedure only to remove foreign contaminates (oils, dirt) from the platen that can damage the printhead or other printer components. This procedure will shorten or even exhaust the linerless platen’s useable life. If the linerless media continues to jam after cleaning and feeding 1 to 2 meters (3 to 5 feet) of media, replace the platen.
Important: The above cleaning procedures are not for QLn Healthcare printers. Refer to the Guide to Disinfecting and Cleaning QLn Healthcare Printers (p/n P1066640-001) for detailed cleaning instructions.

Figure 32b: Cleaning the QLn Series Printers (Linerless)
Troubleshooting

If the printer is not functioning properly, refer to the chart below to find the state of the LED charge indicator on the Front Control Panel. Then refer to the Troubleshooting topic referenced in the chart to resolve the problem. Please note that the charge LED is only on when DC power is applied to the printer. If no DC power is applied the LED is off, which does not apply to the table below.

### Troubleshooting Topics

**1. No power:**
- Check that battery is installed properly.
- Recharge or replace battery as necessary.

**Caution:** Always dispose of batteries properly. Refer to Appendix F for more information on proper battery disposal.

**2. Media does not feed:**
- Be sure media cover is closed and latched.
- Check spindle holding media for any binding.
- Ensure most recently printed label is removed (only in peel mode).
- Ensure label sensor is not blocked.

**3. Poor or faded print:**
- Clean print head.
- Check quality of media.

**4. Partial or missing print:**
- Check media alignment.
- Clean print head.
- Ensure media cover is properly closed and latched.
5. **Garbled print:**
   • Check baud rate.

6. **No print:**
   • Check baud rate.
   • Replace battery.
   • Check cable to terminal.
   • Establish RF Link and/or restore LAN associativity.
   • Invalid label format or command structure. Place printer in Communications Diagnostic (Hex Dump) Mode to diagnose problem.

7. **Reduced battery charge life:**
   • If battery is older than 1 year old, short charge life may be due to normal aging.
   • Check battery health.
   • Replace battery.

8. 🔄 **flashing:**
   • Flashing Data icon is normal while data is being received.

9. 🔄 or 🔄 **flashing:**
   • Check that media is loaded and that the media cover is closed and securely latched.

10. **Communication error:**
    • Check baud rate.
    • Replace cable to terminal.

11. **Label jam:**
    • Open head release latch and media cover.
    • Remove and reinstall media.

12. **Skip Labels:**
    • Check media for top of form sense mark or label gap.
    • Check that the maximum print field has not been exceeded on label.
    • Ensure bar or gap sensor is not blocked or malfunctioning.
13. **Blank LCD screen:**
   - Make sure printer is turned on.
   - No application loaded or application corrupted: reload program.

14. **No NFC Connectivity**
   - Ensure smartphone is positioned 3 inches (7.62 cm) or closer to the Print Touch icon on the side of the printer.

**Troubleshooting Tests**

**Printing a Configuration Label**

To print out a listing of the printer’s current configuration follow these steps:

1. Turn the printer off. Load the media compartment with journal media (media with no black bars printed on the back).
2. Press and hold the Feed Button.
3. Press and release the Power button and keep the Feed button pressed. When printing starts, release the Feed button.

---

Note: The configuration report can also be printed from the Info (Help) menu on the LCD.

---

Refer to Figures 34, 34a, and 34b for sample configuration printouts.

**Communications Diagnostics**

If there is a problem transferring data between the computer and the printer, try putting the printer in the Communications Diagnostics Mode (also referred to as the “DUMP” mode). The printer will print the ASCII characters and their text representation (or the period ‘.’, if not a printable character) for any data received from the host computer.

To enter Communications Diagnostics Mode:

1. Print a configuration label as described above.
2. At the end of the diagnostics report, the printer will print: “Press FEED key to enter DUMP mode”.
3. Press the FEED key. The printer will print: “Entering DUMP mode”.

---

QLn Series User Guide
To enter Communications Diagnostics Mode:
1. Print a configuration label as described above.
2. At the end of the diagnostics report, the printer will print: “Press FEED key to enter DUMP mode”.
3. Press the FEED key. The printer will print: “Entering DUMP mode”.

---

**Note** • If the FEED key is not pressed within 3 seconds, the printer will print “DUMP mode not entered” and will resume normal operation.

---

4. At this point, the printer is in DUMP mode and will print the ASCII hex codes of any data sent to it, and their text representation (or “.” if not a printable character).

   Additionally, a file with a “.dmp” extension containing the ASCII information will be created and stored in the printer’s memory. It can be viewed, “cloned” or deleted using the Net Bridge application. (Refer to the Net Bridge documentation for more information.)

   To terminate the Communications Diagnostics Mode and return the printer to normal operations:
1. Turn the printer OFF.
2. Wait 5 seconds.
3. Turn the printer ON.

Contacting Technical Support

If the printer fails to print the configuration label, or you encounter problems not covered in the Troubleshooting Guide, contact Zebra Technical Support. Technical Support addresses and phone numbers for your area can be found in Appendix H of this manual. You will need to supply the following information:

- Model number and type (e.g. QLn320)
- Unit serial number (Found on the large label on the back of the printer, also found in the configuration label printout.
- Product Configuration Code (PCC) (15 digit number found on the label on the back of the unit)

---

**Note** • Refer to Appendix A for additional information on Data I/O cables.
Appendix A

Interface Cables (RS-232 Cables)

Part Number P1031365-053; DB-9 to 14-Pin Serial

Part Number P1031365-052; 8-Pin DIN to 14-Pin Serial Cable
USB Cables

Part Number AT17010-1; USB A to USB Mini B Cable

Part Number P1031365-055; 4 Position USB Mini to 4-Pin USB (w/ Strain Relief)

Note • Visit the Zebra website at: www.zebra.com/accessories for a listing of interface cables for all Zebra mobile printers.
Appendix B

Media Supplies

To insure maximum printer life and consistent print quality and performance for your individual application, it is recommended that only media produced by Zebra be used. Advantages include:
• Consistent quality and reliability of media products.
• Large range of stocked and standard formats.
• In-house custom format design service.
• Large production capacity which services the needs of many large and small media consumers including major retail chains world wide.
• Media products that meet or exceed industry standards.

For more information go the Zebra website (www.zebra.com) and select the Products tab, or refer to the CD included with the printer.

Appendix C

Maintenance Supplies

In addition to using quality media provided by Zebra, it is recommended that the printer be cleaned as prescribed in the maintenance section. The following item is available for this purpose:
• Cleaning Pen (12 pack): p/n 105950-035
### Appendix D

**Note** • The following menus in this Appendix apply only to QLn420 and QLn Healthcare printers.

#### SETTINGS Menu

<table>
<thead>
<tr>
<th>Menu</th>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>DARKNESS</td>
<td>-49</td>
<td>Set the darkness to the lowest setting that provides good print quality. If you set darkness too high, the label image may print unclearly, bar codes may not scan correctly, or the printhead may wear prematurely.</td>
</tr>
<tr>
<td>PRINT SPEED</td>
<td>4.0</td>
<td>Select the speed for printing a label (given in inches per second). Slower print speeds typically yield better print quality.</td>
</tr>
<tr>
<td>MEDIA TYPE</td>
<td>MARK</td>
<td>Select the type of media that you are using.</td>
</tr>
<tr>
<td>TEAR OFF</td>
<td>0</td>
<td>If necessary, adjust the position of the media over the tear-off bar after printing.</td>
</tr>
</tbody>
</table>
Specify the width of the labels being used. The default value is the maximum width for the printer based on the printhead’s DPI value.

Select a print mode that is compatible with your printer options.

If necessary, shift the print position horizontally on the label. Positive numbers move the left edge of the image toward the center of the label by the number of dots selected, while negative numbers move the left edge of the image toward the left edge of the label.

When reprint mode is enabled, you can reprint the last label printed either by issuing certain commands or by pressing the DOWN ARROW on the keypad.
Set the maximum label length to a value that is at least 1.0 in. (25.4 mm) greater than the actual label length plus the interlabel gap. If you set the value to one that is smaller than the label length, the printer assumes that continuous media is loaded, and the printer cannot calibrate.

If necessary, change the language that the printer displays.

**Note** • The selections for this parameter are displayed in the actual language to make it easier to find one that you are able to read.

If necessary, shift the print position horizontally on the label. Positive numbers move the left edge of the image toward the center of the label by the number of dots selected, while negative numbers move the left edge of the image toward the left edge of the label.

When reprint mode is enabled, you can reprint the last label printed either by issuing certain commands or by pressing the LEFT ARROW on the keypad.
TOOLS Menu

Use scrolling feature to select from a variety of help topics including how to load media, location and removal of battery, and cleaning the printhead. There are also explanations of various icons including battery, error, latch, media, RCV data, Ethernet, signal, WLAN, and Bluetooth.

Prints a printer configuration label, sensor profile, barcode information, font information, images, formats, two-key report, and network settings.

Changes the contrast on the printer’s display (i.e. the higher the number, the darker the contrast).

Allows the user to turn the LCD backlight on or off.
Sets the duration of the LCD backlight in seconds.

Select the information shown on the printer’s display when the printer is idle.

Set the action for the printer to take during the power-up sequence, i.e. no motion, calibrate, etc.

Set the action for the printer to take when you close the printhead, i.e. feed, calibrate, etc.
Use this diagnostic tool to cause the printer to output the hexadecimal values for all data received by the printer.

This menu item indicates if the Zebra Basic Interpreter (ZBI 2.0TM.) option is enabled on your printer.
### NETWORK Menu

<table>
<thead>
<tr>
<th>ACTIVE PRINT SERVER</th>
<th>NONE</th>
</tr>
</thead>
</table>

Informs the user of the presence of an active server. Only one print server can be installed at a time, therefore the print server installed is the active print server.

<table>
<thead>
<tr>
<th>WLAN STATUS</th>
<th>NOT ASSOCIATED</th>
</tr>
</thead>
</table>

Informs the user if WLAN is associated or not associated.

<table>
<thead>
<tr>
<th>WLAN IP ADDRESS</th>
<th>0.0.0.0</th>
</tr>
</thead>
</table>

View, and if necessary, change the printer’s WLAN IP address.

<table>
<thead>
<tr>
<th>WLAN SUBNET MASK</th>
<th>255.255.255.0</th>
</tr>
</thead>
</table>

View, and if necessary, change the WLAN subnet mask.

<table>
<thead>
<tr>
<th>WLAN GATEWAY</th>
<th>0.0.0.0</th>
</tr>
</thead>
</table>

View, and if necessary, change the default WLAN gateway.
WLAN IP PROTOCOL

ALL

This parameter tells if the user or the server selects the WLAN IP address.

WLAN MAC ADDRESS

00:19:70:7A:20:44

View the WLAN Media Access Control (MAC) address of the wireless print server that is installed in the printer.

ESSID

DSF802LESS54

The Extended Service Set Identification (ESSID) is an identifier for your wireless network. This setting, which cannot be modified from the control panel, gives the ESSID for the current wireless configuration.

AP MAC ADDRESS

00:05:9A:3C:78:00

View the AP MAC address associated with the printer.

CHANNEL

View the network channel.
### SIGNAL

0

View, and if necessary, change the printer’s network signal.

### WIRED IP ADDRESS

0.0.0.0

View, and if necessary, change the printer’s wired IP address.

### WIRED SUBNET MASK

255.255.255.0

View, and if necessary, change the printer’s wired subnet mask.

### WIRED GATEWAY

0.0.0.0

View, and if necessary, change the wired gateway setting.

### WIRED IP PROTOCOL

ALL

This parameter tells if the user (permanent) or the server (dynamic) selects the IP address. If a dynamic option is chosen, this parameter tells the method(s) by which the wired or wireless server receives the IP address from the server.
View, and if necessary, change the printer's network signal.

<table>
<thead>
<tr>
<th>WIRED MAC ADDRESS</th>
<th>00:07:4D:3F:D3:B2</th>
</tr>
</thead>
</table>

View, and if necessary, change the printer’s wired IP address.

<table>
<thead>
<tr>
<th>IP PORT</th>
<th>6101</th>
</tr>
</thead>
</table>

View, and if necessary, change the printer’s wired subnet mask.

<table>
<thead>
<tr>
<th>IP ALT PORT</th>
<th>9100</th>
</tr>
</thead>
</table>
BATTERY Menu

BATTERY ELIMINATOR
INSTALLED

Indicates if a battery eliminator has been installed.

HEALTH
GOOD

Indicates the current health of the battery, i.e. Good, Past Useful Life, etc.

CYCLE COUNT
3

View the current cycle count of the battery.

FIRST USED
7-12-2012

View the date on which the battery was first used in the printer.

SERIAL NUMBER
1509

View the serial number of the battery pack.
<table>
<thead>
<tr>
<th>TIMEOUT</th>
<th>0 SECONDS</th>
</tr>
</thead>
<tbody>
<tr>
<td>VIEW, and if necessary, change the battery timeout.</td>
<td></td>
</tr>
<tr>
<td>VOLTAGE</td>
<td>8.39</td>
</tr>
<tr>
<td>VIEW the current voltage level of the battery pack.</td>
<td></td>
</tr>
<tr>
<td>WARNING</td>
<td>6.87 (176)</td>
</tr>
<tr>
<td>DTR CONTROL</td>
<td>OFF</td>
</tr>
<tr>
<td></td>
<td></td>
</tr>
</tbody>
</table>
If necessary, change the language that the printer displays.

*Note* • The selections for this parameter are displayed in the actual languages to make it easier to find one that you are able to read.

Enable this menu item to allow certain ZPL commands to override the printer’s current settings.

Set the format command character to match what is used in your label formats.

Set the control prefix character to match what is used in your label formats.
Set the delimiter character to match what is used in your label formats.

Select the mode that matches what is used in your label formats.
SENSORS Menu

MEDIA STATUS

OK

LABEL LENGTH CAL

TAKE LABEL

0

Important • This value is set during sensor calibration. Do not change this setting unless you are told to do so by Zebra Technical Support or by an authorized service technician.
### PORTS Menu

Battery Disposal

The EPA certified RBRC® Battery Recycling Seal on the Lithium-Ion (Li-Ion) battery supplied with your printer indicates Zebra Technologies Corporation is voluntarily participating in an industry program to collect and recycle these batteries at the end of their useful life, when taken out of service in the United States or Canada. The RBRC program provides a convenient alternative to placing used Li-Ion batteries into the trash or the municipal waste stream, which may be illegal in your area.

Important • When the battery is depleted, insulate the terminals with tape before disposal.

Please call 1-800-8-BATTERY for information on Li-Ion battery recycling and disposal bans/restrictions in your area. Zebra Technologies Corporation’s involvement in this program is part of our commitment to preserving our environment and conserving our natural resources. Outside North America, please follow local battery recycling guidelines.

Product Disposal

The majority of this printer’s components are recyclable. Do not dispose of any printer components in unsorted municipal waste. Please dispose of the battery according to your local regulations, and recycle the other printer components according to your local standards. For more information, please see our web site at: http://www.zebra.com/environment.
### Appendix G

#### Alert Messages

The QLn Series printers will display the following alert messages to inform the user of various fault conditions that might occur with the QLn220, QLn320 and QLn420 printers.

Appendix H

Using Zebra.com

The following examples illustrate the search function on Zebra’s website for finding specific documents and downloads.

Example 1: Find the QLn Series User Guide.

Type the appropriate printer name in search box.

Click on the link for the desired QLn printer as indicated below.
Click on the “Manuals” tab and select QLn Series User Guide to download the manual.

To download Software, Firmware, or Drivers, click on the appropriate tab listed below and choose the necessary tools.
Appendix I

Product Support

When calling with a specific problem regarding your printer, please have the following information on hand:

- Model number/type (e.g. QLn320)
- Unit serial number (refer to Appendix E)
- Product Configuration Code (PCC) (refer to Appendix E)

In the Americas contact:
