A revelation in colour

Now you can print colour labels on demand with Zebra’s patented* IQ Color direct-thermal ink technology, which is compatible with any Zebra® thermal printer. IQ Color enables you to create three colour zones (plus black) within the label that can be activated as required to highlight important information in colour within one label format. This innovative technology provides a flexible, efficient and accurate alternative to other methods, such as using preprinted colour thermal media, laser or inkjet printing, separate colour labels or colour markers.

Customise your needs

During label manufacturing, Zebra applies invisible ink colours to the zones you designate. Your printer heat-activates the ink to make selected colours visible as your application requires. It can reveal the colour in the form of shapes, text, graphics or reverse images.

To help you visualise the potential of IQ Color for your application, see the demonstration video at www.emea.zebra.com/en/supplies

* Patent only applies in the U.S.
Specifications at a glance*

Available colours
- Red
- Orange
- Yellow
- Green
- Blue
- Purple
- Cyan
- Magenta

Capabilities in colour zone
- Text
- Shapes
- Graphics (logos)
- Reverse image

Shelf life and storage conditions
- Six months

How it works.
Select areas to be printed in colour with invisible thermal ink. You can choose three colours in addition to standard black thermal printing.

When required, run the label through the printer as normal and the heat in the colour zones activates the thermal ink to reveal your messages and/or images.
