

“I need  
to streamline  
receiving.”

The solution's  
in black and white.

Warehouse Solutions

## CURRENT SITUATION

A rise in demand means an inevitable rise in the chance of slower processing times, shortages, discrepancies, and damages throughout the warehouse receiving process. It's how you handle these issues that matters. Your warehouse can minimize and move beyond these receiving challenges with the right tools, technology, and systems in place to exceed expectations in an increasingly digital world.

### “How do I create a smooth-running receiving method?”

As demands reach new heights, legacy warehouse management systems can fail to properly identify and verify goods as they move throughout the receiving process.

### “How can I keep discrepancies from interfering with the downstream process?”

Shortages and damages can happen in every warehouse. Keeping manual processes updated with consistent reports of these discrepancies and other changes in shipment data is difficult.

### “How can I enhance communication?”

Constant communication is key throughout your warehouse and yard to ensure updates and data reports are accessible to everyone, anywhere in the receiving process—virtually instantaneously.

## MEETING THE CHALLENGE

Small and growing warehouses like yours are using digital receiving solutions to support every step of their receiving process and exceed expectations.

### Visibility of every step

When your workforce has tools that promote visibility, from where the product is now to where it needs to go next, you can ensure traceability of your goods, eliminate errors, and speed up put-away times. Mobile processes help receiving staff identify and verify shipments with a simple scan of a barcode, RFID tag, or RMA label.

### Connect the dots

Connect incoming shipment data to your warehouse management system in real-time with mobile tools to easily evade shortages, discrepancies, and damages.

### Empower your workforce

When your workers are empowered with consistent communication through voice and data information sharing technology they can work together to receive, sort, and fulfill orders with more speed and accuracy than ever before.

SEE IT IN ACTION: Receiving

## FUTURE-READY WAREHOUSE SOLUTIONS

Streamline every step with Zebra's purpose-built technology to advance your warehouse, whether used alone or as a part of the complete problem-solving ecosystem.

Drive productivity throughout the receiving process with uncompromising performance and accuracy, even in the most challenging work conditions, with the **DS3600 Series Rugged Scanner**.
