Certified Supplies
Print Confident. Print Quality. Print Zebra.

RFID Labeling Solutions
Why RFID?

RFID technology helps you transform business processes with faster, more accurate data collection.

RFID enables you to scal a large number of tags simultaneously, without requiring a line of sight. It also allows you to not only read a tag, but also write to a tag, letting you easily update printed tags with new information. RFID requires less human intervention than standard barcoding, resulting in increased efficiency and productivity.

- Increased visibility
- Improved accuracy
- Greater efficiency
- Improved productivity
Why Zebra RFID Supplies

Large offering of in-stock RFID labels:
• Realize the benefits of RFID faster, with shipments occurring within 24 hours
• Streamline proof-of-concept and implementation
• Eliminate long lead times or large minimum order quantities

Exceptional performance and consistency:
• Use of the latest chip technology
• Pre-tested supplies materials and inlays
• We use consistent materials from order to order
• In-depth knowledge of Zebra printers and ISO 9001 procedure includes accurate tag placement

RFID and label solution expertise
• Global leader in RFID technologies – from printers and readers to RFID supplies
• Zebra understands what impacts application performance and will help you realize the benefits of RFID quickly
• Knowledge to recommend an entire RFID solution that delivers exceptional performance
• As experts in thermal printing materials, we can recommend the right material to meet your application
Things To Consider When Choosing an RFID Label

**Label materials**
- Is adhesive needed?
- Direct thermal or thermal transfer?
- Will the label be exposed to extreme environments?
- How long will the label need to last?

**Inlay**
- What type of items are being tagged?
- What is the environment?
- How much memory is required?

**Read environment**
- What will be reading the RFID label?
  - Overhead reader?
  - Handheld reader?
  - RFID portal?
- What is your printing/encoding capability?
RFID Label Construction

RFID IC (RFID Chip)
Contains memory where the data is stored

RFID Antenna
Allows tag to receive signals from the reader and send info back to the reader

RFID Tag
Label or non-adhesive tag with inlay
Zebra Certified Supplies deliver value to businesses

Zebra Certified Supplies provide the most consistently outstanding quality, performance and service, so customers never have to worry about supply issues interrupting their operations.

Consistently outstanding quality
At Zebra, quality is about more than just the product.; it is in everything we do. We insist on quality from start to finish. Zebra knows consistency is important, so we never substitute materials. You receive the same formulation every time you order, ensuring consistent print quality and durability in your application, every order.

Exceptional service from Zebra
One of the largest and most experienced thermal label converters in the world, Zebra has the size, scale and infrastructure to meet your printing supply needs quickly and effectively.

Unmatched expertise
Zebra Certified Supplies are the only thermal printing supplies tested and recommended for Zebra printers. With over 30 years’ experience, our supplies R&D team tests each label material with Zebra printers to ensure optimal print performance and quality, reducing your printer upkeep cost and virtually eliminating the need to reprint and replace labels.
Testing Capabilities

Our Voyantic testing equipment can help you identify the optimal inlay for the surface being labeled. The Zebra RFID team will test any combination of labels and inlays for specific use cases that may arise.
In-House RFID Label Manufacturing

Zebra’s state-of-the-art presses and RFID Manufacturing equipment enables us to meet your RFID needs quickly.

With our manufacturing equipment and wide range of raw materials and inlays, Zebra can add almost any inlay to almost any label material.
RFID Printing and Encoding Service

Reduce RFID implementation time

Whether you need to understand the performance and ROI of a RFID solution, or you need to meet a customer’s RFID tagging requirements, Zebra’s Printing and Encoding Service delivers what you need, fast. Get as little as 1,000 serialized, pre-printed and encoded RFID tags to meet your specifications to support any pilot or compliance needs.

Quickly Understand the Benefits of RFID
Minimize project delays due to long lead times to acquire tags without the need to acquire and set-up a RFID printer to support proof-of-concept.

Hassle-Free Compliance
Comply with your customer’s RFID identification requirements quickly—using minimal IT resources, and without capital investment in RFID printers.

Label/Tag Options
ZipShip In-Stock RFID Labels
• Choose from over 18 in-stock label and inlay options
• Minimum order of 1,000 tags

Custom Solutions
• 90+ certified label materials, plus access to inlays from the leading providers
• Minimum order of 25,000 fully customized tags

Printing & Encoding Options
Standard Formats
Leveraging one of the four standard formats we have created takes the guesswork out of determining what to print and accelerates the delivery of the RFID tags.

Customized Formats
• Designed to your exact specification
• Prescribe the following and their location
  • Barcode symbology
  • Text
  • Graphics
Zebra’s robust portfolio of RFID inlays from top inlay and IC manufacturers allows you to meet a wide range of RFID applications.

General Purpose Inlays
ZBR2000

The ZBR2000 delivers consistent, reliable performance to meet most RFID applications and is certified by Auburn University’s RFID lab. Offering read ranges of over 17 m in free space, this general purpose inlay delivers an optimal balance between performance and price.
Advanced Inlays
ZBR4000

Zebra’s advanced inlay is ideal for applications that require extended read ranges of up to 20m in free space. Certified by Auburn University’s RFID Lab, the ZBR4000 has omni-directional readability and is designed to perform well when placed on challenging materials such as pallets.
Advanced High-Memory Inlays
ZBR4001/ZBR4003/ZBR4005

The ZBR4001, ZBR4003 & ZBR4005 have the same enhanced features of advanced inlays with additional user memory. The additional memory enables users to read and write more data to meet compliance requirements or where users do not have access to a database.
On-Metal Tagging

Next Generation Silverline

The next generation of Silverline delivers up to 3X longer read ranges on-metal, as well as improved read ranges on non-metal surfaces. Designed and extensively tested in Zebra’s ZT411 RFID printer to ensure correct encoding and consistent print quality.
## Specialty Inlays and Designs

Inlays and label designs that provide improved read ranges when used on metal or challenging surfaces, such as IT assets, chemical drums, returnable containers, metal tools, parts and fixtures, laboratory, testing and clinical equipment, as well as jewelry.
