Transform Predictive Analytics into Decisions

For your mobile computers, printers and scanners

Devices are critical to your operations and if they’re not operating at their peak, it can hurt your business. Managing hundreds or thousands of mobile computers, printers and scanners can be tough—and a Mobile Device Management (MDM) system does not provide predictive insights you need for data-driven decisions.

Empower users with a solution that provides device health and utilization insights for your Zebra mobile computers, printers and scanners. Offer operational insights with historical data trends and actionable predictive intelligence to help prevent employee downtime, improve efficiency and bring costs down—all with a single dashboard, Zebra VisibilityIQ™ Foresight.
A Full View of Your Mobile Device Health

Get more out of your investment. Understand your entire fleet of mobile computers in one comprehensive view to prevent employee and device downtime. Know the state of your device health and utilization while getting historical trends and analytics to plan for device repair or replacement.

Keep Operations Running Smoothly from Anywhere

With more visibility into your printer inventory

With operational insight reports and APIs, you can track all your mobile or stationary printers with a simple add-on to the existing Zebra VisibilityIQ™ Foresight solution. Get near real-time access to the current health and state of your printers to keep them running efficiently.

- **Utilization**
  Maximize efficiency by knowing where and how your printers are being used

- **Settings**
  Maintain print quality with the ability to monitor settings and keep them set optimally

- **Alerts**
  Keep operations moving with customizable printer alerts and notifications

- **Battery Usage**
  Prevent worker downtime by removing underperforming batteries from circulation

Manage Your Battery Health

Eliminate mid-shift battery swaps with data on remaining life of your batteries, inventory levels and which batteries need to be taken out of circulation and replenished.

Scanner Inventory and Utilization

Quickly understand your scanner inventory status and utilization trends to ensure your business is appropriately productive and efficient.
Go Beyond Device Management—With Prescriptive Insights

Zebra VisibilityIQ™ Foresight goes beyond simple device management. It provides operational insights on historical data trending, current state health and actionable predictive intelligence to prevent issues and empower informed decisions.

What if I have an MDM or in-house system already?
Zebra VisibilityIQ™ Foresight complements your system by integrating with your MDM to extract your data and combine ours to provide the actionable insights your current system cannot provide on its own. And if you don’t have an MDM, Zebra VisibilityIQ™ Foresight can share device insights alone.

Prevent Device Loss with Predictive Insights

Losing or misplacing a device, or hundreds of devices, costs you. To reduce loss, you need to understand where, when and how a device is trending toward a lost state.

Predict and reduce device loss by tracking device locations and unusual activity through machine learning analytics. Plus, with the ability to send audio and visual notifications for device tracking, you can recover devices quickly while avoiding disruption in your workflows.

With device loss reduction, you can:

Prevent Devices from Being Lost
Reduce costs of replacements by predicting which devices are at risk with past trends

Avoid Downtime During a Switch
Keep productivity high by ensuring workers have the tools they need

Keep Your Fleet Up to Date
Plan for upgrades with historical data on lifespans and expirations

Streamline Operations with Zebra’s APIs

Leverage key data points like device health, utilization and support by integrating them into your own management systems to provide a customizable view of your business.

Up to 15% of devices are lost in the industry on average

With a large fleet to manage, this could equate to a loss of hundreds or thousands of devices, resulting in high unexpected costs and downtime.1

Zebra Account Managers or Partners: Communicate with customers to become early adopters for Device Loss Reduction coming 2022.
