

Printer Setup Utility for Android™ and iOS®

Simplifying printer setup and configuration for Zebra Link-OS™ printers

The faster you get new equipment up and running, the more quickly you can achieve your return on investment. With Zebra's Printer Setup Utility—part of Zebra DNA—configuring your Zebra printers to optimize performance is easy and requires no specialized knowledge.

An easy way to set up and configure your printers

Use the Printer Setup Utility app to connect to your printer using Bluetooth®, Bluetooth LE, Wi-Fi™, Wired, or NFC. Then follow one of the intuitive setup wizards that walk you through setting specific printing parameters—including connectivity, media, print quality, calibration, and printer language—to optimize your printer performance.

Get more efficient with multiple printer setup

The more time it takes you to set up a new printer, the greater the productivity loss. Zebra's Printer Setup Utility app can help save hours or even days during the printer setup process. Previously, setting up multiple printers required repeating the same steps over and over again for each printer. The Zebra Printer Setup Utility app allows you to quickly set up multiple printers by retrieving a setup file stored in the cloud and distributing it to each printer.

Beyond setup: better device management for the life of your printers

Zebra's Printer Setup Utility app not only helps you get your printers up and running faster, it also helps you manage them more effectively. The app provides easy access to current information such as connectivity, total label count, and battery life, allowing you to better monitor the health of your printers. This information is provided through an intuitive interface—making it easy to view printer status, even on printers that have no visual screens. You can also send your printer's configuration file to a remote service representative for faster resolution of printer issues—or use it to install new printer configurations or firmware updates.

Zebra Printer Setup Utility features

"Tap and Pair" technology

makes it easy to set up communication between your mobile device and multiple printers (Android devices with NFC only)

Fast multiple printer setup

can save hours or even days during setup time

Easy file sharing

makes even Bluetooth printers manageable via the cloud

Supports multiple connectivity options

including Bluetooth, Bluetooth LE, Wi-Fi, Wired, or NFC

Displays current printer status

with information on connectivity, label count, and more

ZEBRA DNA

Tools and applications for printers that help you stay a step ahead, utilizing remote management tools, heightened security, and ongoing updates. Ensuring easy integration and interoperability, Zebra DNA enables your printers to work at optimized performance over their entire lifecycle, even as your business needs evolve.
