Zebra Technologies Solution Validation

Ensure your intelligent edge solutions function effectively with the latest Zebra technology

New intelligent edge solutions must be able to function alongside existing IT to be effective. So when you're introducing a new solution into the business you'll want to know it works from your Zebra technology end-to-end with your IT systems. In particular, you'll want to check it works with your specific uses cases. Yet your organization may not have the time or resources to carry out this kind of testing.

With Solution Validation you get the reassurance that any new intelligent edge solution is compatible with and validated for your IT system and Zebra technology.

Solution Validation is a Zebra Signature Service that offers end-to-end and independent testing from the market leader. Zebra checks everyday usability for faster adoption by your teams as well as data integrity with your back-end systems. That way, you can flag up and address technical issues, reduce deployment risks, and ensure your project is on track to deliver.

Rely on independent testing from the market leader
Compatible testing provides the assurance that any new solution will work with Zebra technology. By bringing in this external expertise you can be sure to resolve issues quickly and give your end users the services they need with fewer project delays.

Test everyday use cases unique to your business
Every business is different and so is the way Zebra technologies are used on a day-to-day basis. Validated testing focuses on these use cases and highlights any issues with end user functionality that might disrupt business-as-usual.

Benefit from a future-proofed approach
Solution Validation reproduces your IT set-up for all tests carried out in the Zebra Global Solution Center. If you need to conduct tests again in the future, all your details are stored so no time is wasted.

Why Zebra?

At Zebra, we recognize that for businesses to compete they must become as smart and connected as the world we live in. While other providers focus on their own products, we focus on your business priorities. Solution Validation is just one example of how we do this. By independently verifying your intelligent edge solution will work with your Zebra technology, it gives you the assurance you need.

At-a-Glance: Solution Validation

Overview	Business Impact
Solution Validation replicates your IT environment for tests conducted in the Zebra Global Solution Center.	Provides peace of mind that your new edge-data solution will work alongside your existing Zebra technology.
All testing is based on your own use cases for interoperability, functionality, and usability.	Removes the risk that a new edge-data solution will disrupt business workflows.
All devices at the edge of your network are covered, including mobile devices and printers.	Reduces the chance of additional project costs through delays.
It verifies app behavior under typical use cases (e.g. a sudden loss of connectivity during data sync).	
Evaluation and testing of staging and device management is included.	
Plus, your test environment is preserved for any future test requirements.	

**introduce intelligent edge solutions with the
assurance they work with Zebra products
– only with Solution Validation**
