

IQ Color

THE FLEXIBILITY TO PRINT COLOR VISUAL CUES ON DEMAND

Print color labels on demand using Zebra's exclusive IQ Color direct thermal ink technology, and any Zebra® thermal printer.

IQ Color enables you to create visual cues or highlight important information — and do it as needed — within your current label format. This innovative technology provides a flexible, efficient and accurate alternative to such methods as using preprinted color thermal media, laser or ink jet printing, separate color labels, or color markers.

Customized to Your Needs

During label manufacturing, Zebra applies invisible ink colors to the zones you designate. Your printer heat-activates the ink to make select colors visible as your application requires. It can reveal the color in the form of shapes, text, graphics or reverse images.

Take a Cue from Color with IQ Color. Typical Color-Cue Applications Include:

Healthcare

- Lab
- Specimen
- Pharmacy order prioritizing

Retai

- Markdown labels
- On sale labels
- Product attributes

Manufacturing

- Quality control
- · Work in process

Transportation and Logistics

- · Instructions for sortation
- · Inventory management
- · Shipping (e.g., RUSH)
