

## Improve Your Warehouse Staff Communications with the Latest Mobile Devices

### ADEQUATE VOICE AND DATA TOOLS PROVIDE THE BACKBONE OF AN EFFICIENT, COLLABORATIVE WAREHOUSE

Warehouses are big, loud and occasionally disorganized. As an essential part of your business's daily operations, it's important to develop an optimal staff communications strategy that withstands chaotic warehouse conditions. With the right tools at your disposal, you can streamline communication and increase productivity to run your warehouse efficiently.

Equipped with Wi-Fi, cellular and Bluetooth® connectivity, wearable and handheld computers keep your team linked through a variety of platforms—including push-to-talk (PTT) capabilities, group or private calls and texts—to track real-time product information. This always-on, real-time communication can greatly impact not only productivity, but also worker satisfaction.

#### Is Your Warehouse Performing at Its Best?

A connected staff lets your business streamline and automate processes, improve staff flexibility to respond to customer demand, increase customer satisfaction and manage risk. With access to a push-to-talk service, your staff can communicate instantly with coworkers and management

across multiple networks and devices anywhere. A cloud-based solution can increase productivity and minimize cycle times over secure Wi-Fi or cellular networks for one-to-one and group calls with the push of a button.

#### Productivity by the Numbers

Mobile computers come in all shapes and sizes to handle the different demands of your workspace. Warehouses should use computers that meet the unique demands of their environment, like the TC8000 Touch Mobile Computer. It was designed with your warehouse's efficiency in mind. With its slim design, Android™ OS compatibility, virtual keyboard and quick-and-easy battery change, your team's overall productivity will increase by 14 percent. Its unique features include:

- **Ergonomic Design** – developed to be 33 percent lighter than traditional scanners to reduce muscle fatigue.
- **Virtual Keyboard** – a larger, intuitive All Touch Terminal Emulation (TE) screen gives staff a clear view of their tasks and the ability to type 40 percent faster with 60 percent fewer errors.

The Wi-Fi and Android-compatible handheld TC8000 Touch Mobile Computer increases overall productivity by 14%.

- **Mobility DNA** – our application suite, Android OS, development tools and administrative utilities let you seamlessly communicate with other Zebra devices, including printers.
- **Instantly Connect** – Workforce Connect PTT Pro and TekSpeech® Pro allow your staff to communicate effectively in any environment.
- **Time Savers** – hands-free proximity scanning, All Touch TE screen that eliminates screen tilt after each scan, triple-shift battery life, and the ability to switch batteries without disconnecting from Wi-Fi all increase productivity by reducing downtime.

### Stay Connected No Matter Where You Are

Whether working indoors or out in the field, your staff needs to stay connected with coworkers, supervisors and customers using Wi-Fi, cellular, Android OS and Bluetooth on the latest mobile devices. Staff should have mobile computers that are GPS-enabled for more access to location-based applications, whether in warehouses or where signals are weak, using Bluetooth low energy technology for location services. For optimal productivity, mobile devices should capture real-time data from barcodes, photos, video, signatures and radio-frequency identification (RFID) tags automatically.

### Full Application Access with a Cloud-Based Management Platform

Easy-to-use, cloud-based Asset Visibility Platform and Operational Visibility Service (OVS) applications can drive down cost, simplify management operations and save time. Virtual touch screens allow staff to customize application dashboards to stage, monitor, update and troubleshoot mobile computer issues from a single location. Device-level asset controls capture real-time data and report back utility operations for all your devices by site or model. Managers can also prevent users from downloading outside apps, files and games, or disable external memory card slots to prevent data theft.

### All the Security, Support and Durability You'll Need

A diverse workplace calls for diverse technology that adapts to the work environment. Your staff might need a handheld computer that's lightweight and can fit easily into their pocket. Or they may require a rugged tablet that offers larger screens for better visibility. To increase productivity, your devices should provide long-lasting uptime and enterprise-class life cycles at a low cost of ownership.

Long battery life with maximum uptime is crucial to maintaining smooth communication flow between teams. Where older technology failed to support these demands, operators can now monitor vitals and receive automatic alerts using battery management software to determine when batteries should be replaced.

## APPLICATION BRIEF

### STAFF COMMUNICATIONS IN THE WAREHOUSE

Zebra's Mobility Security Suite helps your data stay confidential.

Mobile Virtual Private Networks (MVPNs) provide government-grade security for all communication over cellular and Wi-Fi networks, without reducing wireless performance. Data travels securely between mobile devices through:

- Firewalls
- Intrusion prevention
- Enforced authentication
- Data encryption

Your devices should also come with responsive support services to ensure maximum uptime and continued protection of your investment. Coverage should include:

- Normal wear and tear
- Internal and external components damaged due to accidental breaks
