Index
Introduction

The *CS3000 Series Scanner Product Reference Guide* provides general instructions for setting up, operating, maintaining, and troubleshooting the scanner. The CS3000 series scanner is available in the following configurations:

- CS3000 - USB (batch), 0.5 GB Flash
- CS3070 - USB (batch) and Bluetooth, 0.5 GB Flash

Each scanner includes a USB host cable. A charging cradle is also available for mounting, charging, and host connection.

Product Reference Guide – Start Here

Go to the last page of this electronic manual and print it out. This is the Quick Start Instructions. This single page provides links within the document to technical support for 99% of all customer questions.

Chapter Descriptions

Topics covered in this guide are as follows:

- **Chapter 1, Getting Started** provides a product overview and describes how to charge, connect, and configure the scanner.
- **Chapter 2, Scanning** provides instructions for how to scan bar codes and send the data to a host, as well as beeper and LED definitions.
- **Chapter 3, User Preferences** describes each user preference feature and provides the programming bar codes for selecting these features for the scanner. It also includes wireless communication parameters and commonly used bar codes to customize how data is transmitted to the host device.
- **Chapter 4, Symbologies** describes all symbology features and provides the programming bar codes for selecting these features.
- **Chapter 5, Maintenance and Technical Specifications** provides information on how to care for the scanner, troubleshooting, and technical specifications.
• Appendix A, Standard Default Parameters provides a table of all host devices and miscellaneous scanner defaults.

• Appendix B, Programming Reference provides a table of AIM code identifiers, ASCII character conversions, and keyboard maps.

• Appendix C, Sample Bar Codes includes sample bar codes.

Notational Conventions

The following conventions are used in this document:

• Italic is used to highlight the following:
  • Chapters and sections in this and related documents

• Bold text is used to highlight the following:
  • Key names on a keypad
  • Button names on a screen or window.

• bullets (•) indicate:
  • Action items
  • Lists of alternatives
  • Lists of required steps that are not necessarily sequential

• Sequential lists (e.g., those that describe step-by-step procedures) appear as numbered lists.

• Throughout the programming bar code menus, asterisks (*) are used to denote default parameter settings.

* Indicates Default * Baud Rate 9600 Feature/Option

NOTE This symbol indicates something of special interest or importance to the reader. Failure to read the note will not result in physical harm to the reader, equipment or data.

CAUTION This symbol indicates that if this information is ignored, the possibility of data or material damage may occur.

WARNING! This symbol indicates that if this information is ignored the possibility that serious personal injury may occur.
Related Documents

- CS3000 Series Scanner Quick Reference Guide (p/n 72-136598-xx) provides general information to help the user get started with the scanner, including basic setup and operation instructions.

For the latest version of this guide and all guides, go to: http://www.zebra.com/support.

Service Information

If you have a problem using the equipment, contact your facility’s technical or systems support. If there is a problem with the equipment, they will contact the Zebra Global Customer Support Center at: http://www.zebra.com/support.

When contacting Zebra support, please have the following information available:

- Serial number of the unit
- Model number or product name
- Software type and version number

Zebra responds to calls by e-mail, telephone or fax within the time limits set forth in service agreements.

If your problem cannot be solved by Zebra support, you may need to return your equipment for servicing and will be given specific directions. Zebra is not responsible for any damages incurred during shipment if the approved shipping container is not used. Shipping the units improperly can possibly void the warranty.

If you purchased your business product from a Zebra business partner, please contact that business partner for support.
CHAPTER 1 GETTING STARTED

Introduction

The CS3000 Series Scanner captures and stores bar codes for a variety of uses, and transmits bar code data to a host via USB connection or Bluetooth.

This scanner supports the following host interfaces:

- USB - The scanner connects to a USB host as a removable storage device, via a cradle or USB cable.
- Bluetooth - The scanner supports Bluetooth HID connection to a host (the default) where the scanner emulates a keyboard, as well as Serial Port Profile (SPP) connection where the scanner behaves as if there is a serial connection.

Figure 1-1  CS3000 Series Scanner
Unpacking the Scanner

Remove the scanner from its packing and inspect it for damage. If the scanner was damaged in transit, contact Zebra support. See page xiii for contact information. **KEEP THE PACKING.** It is the approved shipping container and should be used if the equipment ever needs to be returned for servicing.

The Cradle

The cradle sits on a desktop and serves as a stand, charger, and USB communication device for the CS3000 series scanner. The cradle does not require a separate power supply to charge the scanner.

Connecting the Cradle

Insert the cradle’s interface cable into a USB port on the host.

---

**Figure 1-2**  Cradle

**Figure 1-3**  Connecting the Cables to the Cradle
Charging the Scanner Battery

To charge the CS3000 series scanner, connect it to a host PC via the USB host cable or charging cradle. No power supply is necessary. Charge time is approximately three hours for a fully discharged battery.

To check the battery charge status, hold the scan (+) button for 15 seconds. See Battery charge status in Table 2-1 on page 2-3.

An authorized Zebra repair facility can replace the CS3000 battery. Changing the battery does not affect bar code data which is stored in non-volatile memory, however the date and time is lost upon changing the battery or if the battery completely loses charge.

Charging via USB Host Cable

1. Insert the mini-USB connector on the host cable in the interface port on the scanner.
2. Connect the other end of the host cable to a USB port on the host PC.

The scanner begins charging. A complete charge of a fully discharged battery takes approximately three hours. Charge within the recommended temperature of 32° to 104° F (0° to 40° C).
Charging via Charging Cradle

1. Insert the cradle’s USB connector into a USB port on the host PC.

![Figure 1-5 Connecting Cradle to Host PC](image)

2. Remove the protective cover from the scanner.

3. Place the scanner in the cradle, ensuring the mini-USB connector in the cradle inserts into the interface port on the scanner.

![Figure 1-6 Inserting Scanner in Cradle](image)

The scanner begins charging. A complete charge of a fully discharged battery takes approximately three hours. Charge within the recommended temperature of 32° to 104° F (0° to 40° C).
**Scanner Charging LED**

The scanner’s LED indicates charging activity (see *Table 2-1 on page 2-3*). The amber LED blinks slowly during charging. The scanner’s LED turns solid green when the battery is fully charged.

---

**Connecting to the Host Computer**

**Batch Connection**

See *Charging the Scanner Battery on page 1-3* for instructions on connecting the scanner to a host PC via USB.

![NOTE] To enter batch scanning mode, the scanner cannot be paired to a Bluetooth host (applies to CS3070 model only).

**Bluetooth Connection: Development Options**

**Serial Port Profile**

This Bluetooth profile emulates a serial cable to provide a simply implemented wireless replacement for existing RS-232 based serial communications applications, including familiar control signals. It is the preferred communication profile implementation because accidental key strokes from the keyboard or touch screen on the host are not entered into the bar code data stream.

**Human Interface Device Emulation**

This Bluetooth profile is a lightweight wrapper of the Human Interface Device protocol defined for USB. Data transmitted from the Bluetooth scanner appears as keyboard entries to the Bluetooth host (Smartphone, PC, etc).

![NOTE] Wedge data appears within whichever application has input focus.
Bluetooth Connection Examples

This section provides the following connection examples:

- **Droid X HID pairing Example**
- **PC HID Pairing Example on page 1-7**
- **PC SPP Pairing Example on page 1-10**
- **Windows Mobile Device (ES400) HID Pairing Example on page 1-13**
- **Windows Mobile Device (ES400) SPP Pairing Example on page 1-17**
- **iPad Pairing Example on page 1-21**

Overview

Pairing the CS3070 with a host device typically requires entering a pairing PIN on both the CS3070 and the host device. To enter the PIN on the CS3070, use the **Numeric Bar Codes for PIN Entry on page 1-24**. For the host device, use the data entry method required for that device to enter the PIN.

**Droid X HID Pairing Example**

For CS3070 scanners, to pair to a Droid X via HID:

1. Press the scan button (+) to wake the scanner.
2. Press and hold the Bluetooth button (round button with logo) for five seconds. The scanner beeps and the Bluetooth button starts blinking quickly to indicate that the scanner is discoverable by the host.
3. On the Droid X, press the Settings button (bottom left hard button).
4. Tap **Settings** from the list of options that appears.
5. Tap **Wireless & networks**.
6. Tap **Bluetooth** to enable Bluetooth.
7. Tap the **Bluetooth settings** option.
8. Tap **Scan for devices**. The CS3070 appears in the **Bluetooth devices** list, indicated by its model name and serial number.
9. Select the CS3070 from the list. A window prompts for the PIN.
10. Tap the text box to open the soft keyboard. Enter the PIN using the keyboard and tap **Ok**.
11. With the CS3070, scan the PIN using the **Numeric Bar Codes for PIN Entry on page 1-24** and scan **Enter**. The scanner beeps to indicate it has paired with the Droid, and the Droid displays **Connected to hid** below the CS3070 device name.

To display scanned data on the Droid:

1. Tap and hold the screen to display the **Add to Home screen** menu.
2. Select **widgets**.
3. Scroll down the menu and select **Sticky Note**.

**NOTE** HID is the default profile for the CS3070. If this was changed, scan **Bluetooth HID Profile on page 3-13**.
4. Tap **Sticky Note** to display the text entry screen.
5. Tap in the text entry field and scan a bar code. The bar code contents appear in the text entry field.

**PC HID Pairing Example**

For CS3070 scanners, to pair to a Bluetooth-enabled PC or laptop via HID:

---

**NOTE** If the host does not support Bluetooth communication, a third-party Bluetooth adapter is required.

1. Press the scan button (+) to wake the scanner.
2. Press and hold the Bluetooth button (round button with logo) for five seconds. The scanner beeps and the Bluetooth button starts blinking quickly to indicate that the scanner is discoverable by the host.

**NOTE** HID is the default profile for the CS3070. If this was changed, scan Bluetooth HID Profile on page 3-13.

3. On the host PC, launch the third party Bluetooth pairing application. Following is a sample window of such an application.

![Add Bluetooth Device Wizard](image)

---

Figure 1-7  *Sample Bluetooth Application Window*
4. Place the application into discover Bluetooth device mode (in this example, select the check box), and click Next.

![Sample Device Discovery Window](image)

**Figure 1-8  Sample Device Discovery Window**

5. Select the CS3070 device from the discovered device list. The Bluetooth application may prompt you to scan a passkey it generated, or for you to create and then scan a passkey (PIN).

![Sample Passkey Option Window](image)

**Figure 1-9  Sample Passkey Option Window**
6. Select an option, then click **Next**:
   - If you select **Choose a passkey for me**, the host generates and displays a passkey.
   - If you select **Use the passkey found in the documentation**, enter the default **1234**.
   - If you select **Let me choose my own passkey**, enter any passkey.

7. Scan **Numeric Bar Codes for PIN Entry on page 1-24** corresponding to the passkey, then scan the **Enter** bar code.

![Sample Bluetooth Pairing Completion Window](image)

**Figure 1-10**  Sample Bluetooth Pairing Completion Window
8. Click Finish to complete the pairing. The device appears in the Bluetooth Devices window.

![Bluetooth Devices Window](image)

**Figure 1-11 Bluetooth Devices Window**

9. Select the device, then click Add... The CS3070 issues a two-tone beep and the Bluetooth button blinks slowly to indicate that the scanner paired with the host.

- **NOTE** Bluetooth pairing suspends temporarily while charging via a USB cable. Disconnecting the cable automatically re-establishes the Bluetooth pairing.

**PC SPP Pairing Example**

For CS3070 scanners, to pair to a Bluetooth-enabled PC or laptop via SPP:

- **NOTE** If the host does not support Bluetooth communication, a third-party Bluetooth adapter is required.

1. Press the scan button (+) to wake the scanner.

2. Scan *Bluetooth Serial Port Profile (SPP) on page 3-13*. The Bluetooth button starts blinking quickly to indicate that the scanner is discoverable by the host.
3. On the host PC, launch the third party Bluetooth pairing application. Following is a sample window of such an application.

![Sample Bluetooth Application Window](image)

Figure 1-12  Sample Bluetooth Application Window

4. Place the application into discover Bluetooth device mode (in this example, select the check box), and click Next.

![Sample Device Discovery Window](image)

Figure 1-13  Sample Device Discovery Window
5. Select the CS3070 device from the discovered device list. The Bluetooth application may prompt you to scan a passkey it generated, or for you to create and then scan a passkey (PIN).

![Sample Passkey Option Window](image)

**Figure 1-14  Sample Passkey Option Window**

6. For SPP, select *Use the passkey found in the documentation*, then enter the default passkey 1234 in the text box. Click **Next**.

![Sample Bluetooth Pairing Completion Window](image)

**Figure 1-15  Sample Bluetooth Pairing Completion Window**

*NOTE* For SPP, the host requires entering a PIN, but no PIN entry is required for the CS3070.
7. Click Finish. In order to complete the pairing, open a serial input application such as HyperTerminal. The CS3070 issues a two-tone beep and the Bluetooth button blinks slowly to indicate that the scanner paired with the host.

*NOTE* Bluetooth pairing suspends temporarily while charging via a USB cable. Disconnecting the cable automatically re-establishes the Bluetooth pairing.

**Windows Mobile Device (ES400) HID Pairing Example**

To pair to a ES400 Windows Mobile 6.5 device via HID:

1. Press the scan button (+) to wake the scanner.

2. Press and hold the Bluetooth button (round button with logo) for five seconds. The scanner beeps and the Bluetooth button starts blinking quickly to indicate that the scanner is discoverable by the ES400.

*NOTE* HID is the default profile for the CS3070. If this was changed, scan Bluetooth HID Profile on page 3-13.

3. On the ES400, launch the third party Bluetooth pairing application. Following is a sample window of such an application.

![Sample Bluetooth Application - Add Device Window](image)

*Figure 1-16  Sample Bluetooth Application - Add Device Window*
4. Tap **Add new device**. The ES400 searches for Bluetooth devices.

![Sample Device Discovery Window](image)

**Figure 1-17  Sample Device Discovery Window**

5. Select the CS3070 device from the discovered device list and tap **Next**. The device prompts you to enter a passcode.

![Enter Passcode Window](image)

**Figure 1-18  Enter Passcode Window**

6. Tap **Next** if you don’t require a passcode, or enter any passcode and then tap **Next**.
7. If you entered a passcode in Step 6, scan Numeric Bar Codes for PIN Entry on page 1-24 corresponding to that code, then scan the Enter bar code.

![Connection Verification Window](image1)

**Figure 1-19** Connection Verification Window

8. Select Yes on the pop-up window to add the device to the device list.

![Discovered Devices List](image2)

**Figure 1-20** Discovered Devices List
9. Select the device and tap **Connect** to complete the pairing. The device appears in the **Connected** list, and the CS3070 issues a two-tone beep and the Bluetooth button blinks slowly to indicate that the scanner paired with the host.

![Bluetooth pairing](image)

**Figure 1-21** *Discovered Devices List*

- **NOTE** Bluetooth pairing suspends temporarily while charging via a USB cable. Disconnecting the cable automatically re-establishes the Bluetooth pairing.
Windows Mobile Device (ES400) SPP Pairing Example

For CS3070 scanners, to pair to a ES400 Windows Mobile 6.5 device via SPP:

1. Press the scan button (+) to wake the scanner.

2. Scan Bluetooth Serial Port Profile (SPP) on page 3-13. The Bluetooth button starts blinking quickly to indicate that the scanner is discoverable by the ES400.

3. On the ES400, launch the third party Bluetooth pairing application. Following is a sample window of such an application.

![Sample Bluetooth Application Window - Add Device Window](image)

Figure 1-22 Sample Bluetooth Application Window - Add Device Window
4. Tap **Add new device**. The ES400 searches for Bluetooth devices.

![Sample Device Discovery Window](image)

**Figure 1-23 Sample Device Discovery Window**

5. Select the CS3070 device from the discovered device list and tap **Next**. The device prompts you to enter a passcode.

![Sample Enter Passcode Window](image)

**Figure 1-24 Sample Enter Passcode Window**
6. Enter the CS3070 default PIN (1234) and tap **Next**.

![Figure 1-25 Connection Verification Window](image)

**NOTE** For SPP, on the host PC a PIN entry is required, but no PIN entry is required on the CS3070 device side.

7. Select **Yes** on the pop-up window to add the device to the device list.

![Figure 1-26 Discovered Devices List](image)
8. Select the device and tap **Connect**. The **Partnership Settings** window appears.

![Partnership Settings Window](image)

**Figure 1-27** | **Partnership Settings Window**

9. Tap **Serial Port** and then **Save** to complete the pairing. The device appears in the **Connected** list, and the CS3070 issues a two-tone beep and the Bluetooth button blinks slowly to indicate that the scanner paired with the ES400.

![Discovered Devices List](image)

**Figure 1-28** | **Discovered Devices List**

**NOTE** Bluetooth pairing suspends temporarily while charging via a USB cable. Disconnecting the cable automatically re-establishes the Bluetooth pairing.
iPad Pairing Example

For CS3070 scanners, to pair to an iPad:

1. Press the scan button (+) to wake the scanner.

2. Press and hold the Bluetooth button (round button with logo) for five seconds. The scanner beeps and the Bluetooth button starts blinking quickly to indicate that the scanner is discoverable by the host.

   **NOTE** HID is the default profile for the CS3070. If this was changed, scan Bluetooth HID Profile on page 3-13.

3. On the iPad, tap the **Settings** icon.

4. Tap **General** from the list of options that appears.

   ![General Menu](image)

   **Figure 1-29** General Menu

5. Tap **Bluetooth**. If Bluetooth is not enabled, swipe to enable it. The CS3070 appears in the **Devices** list, indicated by its model name and serial number.

   ![Bluetooth Devices](image)

   **Figure 1-30** Bluetooth Devices
6. Select the CS3070 from the list. A window prompts for a PIN generated by the iPad.

![Pin Prompt](image)

**Figure 1-31 Pin Prompt**

7. With the CS3070, scan the PIN using the *Numeric Bar Codes for PIN Entry on page 1-24* and scan **Enter**. The scanner beeps to indicate it has paired with the iPad, and the iPad displays **Connected** next to the CS3070 device name.

To display scanned data on the iPad:

1. Tap the **Notes** icon to display the **Notes** text entry screen.

2. Scan a bar code. The bar code contents appear in the **Note**.

   **NOTE** To enter keypad data with the scanned data, press the delete key ( - ) on the CS3070 to invoke the keyboard on the iPad. Press this key again to toggle off the keyboard.

![Note with Keyboard](image)

**Figure 1-32 Note with Keyboard**
Unpairing
To temporarily unpair the scanner and host, press the Bluetooth button. This disables Bluetooth and the Bluetooth button stops blinking. Pressing the Bluetooth button again re-pairs the scanner with the host.

To permanently unpair the scanner and host, scan *Unpair on page 3-13*. This allows the scanner to pair to a different host device.

*NOTE* To enter batch scanning mode, the scanner cannot be paired to a Bluetooth host (applies to CS3070 model only).

Deleting the CS3070 from the Device List
To delete the device from the discovered devices list, tap and hold the device and select **Delete**.

![Deletion interface](image)

Configuring the Scanner

To configure the scanner for initial use:

1. Scan the parameter bar codes in Chapter 3, User Preferences and Chapter 4, Symbologies to customize scanner operation.

2. Scan the Save Configuration bar code on page 3-21 (also provided below).

   ✓ NOTE When scanning parameter bar codes, scan each bar code within two minutes of the previous one. The scanner enters sleep mode after two minutes of inactivity, and any parameter bar codes scanned and not saved are ignored.

3. For additional customization, edit the Config.ini file on the scanner using the options in Editing the Configuration File on page 1-26.

4. CS3070 only: When deploying the new configuration to multiple scanners, to ensure unique CS3070 serial numbers appear in the host's discovery window, edit the Config.ini file to either remove the BTName entry or set it to blank (“BTName=”). To ensure that each scanner uses the default BT name of CS3070:<serial number>.

Staging Multiple Scanners

After creating a config.ini file for one “golden” scanner with all desired settings, create a copy of the file from this scanner and copy it to other scanners via USB connection. Set the time and date on the “cloned” scanners by scanning bar codes from Set Date and Time on page 3-5.

✓ NOTE CS3070 only: When deploying the new configuration to multiple scanners, to ensure unique CS3070 serial numbers appear in the host's discovery window, edit the Config.ini file to either remove the BTName entry or set it to blank (“BTName=”). To ensure that each scanner uses the default BT name of CS3070:<serial number>.

NOTE Before deploying the Config.ini file to multiple scanners, make the file read only to prevent users from overwriting the file when scanning Save Configuration or Reset Factory Defaults on page 3-4.
Editing the Configuration File

Use a text editor such as Notepad to set configuration values in the *Config.ini* editable text file in the *\Parameters* folder on the CS30XX. *Table 1-1* lists the programmable contents of the file.

![NOTE](https://example.com/note.png)

If you make errors while editing the *Config.ini* file, the file LOG.TXT is created in the *\Parameters* folder. Consult this log file to determine the errors and make corrections.

CHAPTER 2 SCANNING

Introduction

This chapter provides instructions for how to scan bar codes and send the data to a host. Beeper and LED definitions are also included.

Scanning

See Chapter 1, Getting Started to install and program the scanner. To scan:

1. Aim the scanner at the bar code.
2. Press the scan (+) button.
3. Ensure the scan line crosses every bar and space of the symbol.

Figure 2-1  Scanning
4. The scanner beeps and the LED turns green to indicate a successful decode. See Table 2-1 and Table 2-2 for beeper and LED definitions.

   ✓ **NOTE** The scanner cannot scan bar codes when it is connected to the host via the USB host cable.

### Deleting Bar Codes

In batch mode, to delete a bar code aim the scanner at the bar code and press the delete ( - ) button.

![Deleting a Bar Code in Batch Mode](image)

**Figure 2-2** Deleting a Bar Code in Batch Mode

   ✓ **NOTE** Bar codes cannot be deleted in Bluetooth mode.

### Transmitting Bar Code Data to Host

#### Transferring Data from a Batch Scanner

The BarcodeFile.txt file within the `\Scanned Barcodes` directory on the scanner stores scanned bar code data. Connect the scanner to the host PC via USB host cable or the charging cradle and use Windows Explorer to navigate to the scanner. Copy the bar code data file to the host.

To clear the bar code data, delete the BarcodeFile.txt file from the scanner, or scan the **Clear Data** bar code on page 3-7.

#### Autorun Feature

The scanner supports an autorun feature where you can build an autorun.inf file to automatically copy the data to the host upon connection. Autorun.inf is a text-based configuration file that defines, upon connecting the scanner, which executable or application to run on the host, which icon represents the scanner, and which menu commands appear when you right-click the scanner icon from Windows Explorer. For more information, search `autorun.inf` on any search engine.
Transferring Data from an RF Scanner

When the scanner is paired to a host via Bluetooth, data transmits to the host after each scan and is not stored on the device.

Out of Range Behavior

If the scanner moves out of range of the host, and does not re-pair with the host within the timeout period, scanned data is lost and the scanner emits a 3-beep error tone.

When the radio loses connection, the Bluetooth LED stops its slow, consistent blinking and the beeper emits a short high low beep. The Bluetooth LED blinks at a faster rate for a period of time while the device attempts to reestablish pairing with the host, and when it returns within range the device repairs. If repairing is unsuccessful the Bluetooth LED stops blinking.

To manually reestablish pairing when the device returns to range, press the Bluetooth LED button. Upon Bluetooth pairing, the beeper emits a short low high beep and the Bluetooth LED starts its slow, consistent blinking again.

User Interface Definitions

The scanner uses beeper and LED sequences to indicate various system events. Table 2-1 and Table 2-2 define these sequences and events.

</table>
CHAPTER 3 USER PREFERENCES

Introduction

This chapter describes each user preference feature and provides the programming bar codes for selecting these features for the scanner.

The scanner ships with the settings shown in the User Preferences Default Table on page 3-2 (also see Appendix A, Standard Default Parameters for all host device and miscellaneous scanner defaults). If the default values suit the requirements, programming is not necessary. To change these values, scan a single bar code or a short bar code sequence. After scanning Save Configuration on page 3-21, the new settings are stored in non-volatile memory and are preserved when the scanner powers down.

To return all features to their default values, scan the Reset Factory Defaults bar code on page 3-4. Throughout the programming bar code menus, default values are indicated with asterisks (*).

Scanning Sequence Examples

In most cases, scan only one bar code to set a parameter value. For example, to set the beeper tone to high, scan the High Frequency (beeper tone) bar code under Beeper Tone on page 3-9. The scanner issues a fast warble beep and the LED turns green, indicating a successful parameter entry.

Other parameters, such as Data Transmission Formats, require scanning several bar codes. See the parameter description for this procedure.

Errors While Scanning

Unless otherwise specified, if an error is made during a scanning sequence, re-scan the correct parameter.
User Preferences Default Parameters

Table 3-1 lists the defaults for user preference parameters. To change any option, scan the appropriate bar code(s) provided in this chapter.

NOTE   See Appendix A, Standard Default Parameters for all default parameters.

Reset

To reset the scanner and apply parameters from the configuration file, scan the following bar code.

Reset Factory Defaults

To reset the scanner to factory defaults, scan the following bar code. This rebuilds the configuration file from program memory.
Set Date and Time

NOTE  You must scan the configuration bar codes to set the time and date stamp on the scanner. The time and date can not be set or edited in the config.ini file. This setting persists for three months if the scanner is not used.

Set Date

Scan the Set Date bar code, then scan six numeric digits in the format mmddyy from Numeric Bar Codes for Date and Time Settings on page 3-6 (first two for the month, second two for the day, third two for the year).

NOTE  To change the date format from mmddyy, see DateFormat on page 1-26.

Set Time

Scan the Set Time bar code, then scan four numeric digits in the format hhmm from Numeric Bar Codes for Date and Time Settings on page 3-6 representing the time according to the 24 hour clock (first two for the hour, second two for the minute).

For example, to set the time to 8:45 in the morning, scan the following bar code, then scan 0, 8, 4, 5. To set the time to 3:07 in the afternoon, scan 1, 5, 0, 7.

NOTE  To change the time format between 12h and 24h, see TimeFormat on page 1-26.

Cancel Date and Time Setting

Scan the Cancel Set Date/Time bar code to cancel the date and time settings.
<table>
<thead>
<tr>

</tr>
<tr>
<td>8</td>
</tr>
<tr>
<td>Enter</td>
</tr>
</tbody>
</table>
Clear Data

Scan the following bar code to clear all batch bar code data on the scanner. This deletes the BarcodeFile.txt from the scanner.

Clear Data
Beeper Settings

Beeper Volume

Parameter # 0x8C

To select a decode beep volume, scan the appropriate bar code.

Low
(0x02)

Medium
(0x01)

*High
(0x00)
Beeper Tone

Parameter # 0x91

To select a decode beep frequency (tone), scan the appropriate bar code.

- Low Frequency
  (0x02)

- *Medium Frequency
  (0x01)

- High Frequency
  (0x00)
Mute Beeper

Scan the Mute Beeper bar code to mute the beeper.

Mute Beeper
(0x01)

*Do Not Mute Beeper
(0x00)
Scanner Options

Scan Angle

Parameter # 0xBF

This parameter sets the scan angle to narrow or wide.

Narrow Angle (35°) (0x05)

*Wide Angle (47°) (0x06)

NOTE The allowed values for this setting are different for some legacy models of scanners. These old values can still be used and are interpreted by the scanner as follows.

<table>
<thead>
<tr>
<th>0x00 - 0x05</th>
<th>0x06 - 0x2C</th>
<th>0x2D - 0x4A</th>
<th>0x4B - 0xFF</th>
</tr>
</thead>
<tbody>
<tr>
<td>Narrow (0x05)</td>
<td>Wide (0x06)</td>
<td>Narrow (0x05)</td>
<td>Wide (0x06)</td>
</tr>
</tbody>
</table>
Transmit “No Read” Message

Parameter # 0x5E

Enable this option to transmit “NR” if a symbol does not decode during the timeout period or before the trigger is released. Any enabled prefix or suffixes are appended around this message.

Disable this to send no message to the host if a symbol does not decode.

Enable No Read
(0x01)

*Disable No Read
(0x00)
Bluetooth Options

Bluetooth Unpair
Scan the following bar code to unpair the scanner from the host.

![Bluetooth Unpair Code]

Bluetooth HID Profile
Scan Bluetooth HID Profile to cause the scanner to emulate a keyboard.

![Bluetooth HID Profile Code]

Bluetooth Serial Port Profile (SPP)
Scan Bluetooth SPP to cause the scanner to emulate a serial connection.

![Bluetooth SPP Code]
Linear Code Type Security Level

Parameter # 0x4E

The scanner offers four levels of decode security for linear code types (e.g., Code 39, Interleaved 2 of 5). Select higher security levels for decreasing levels of bar code quality. As security levels increase, the scanner’s aggressiveness decreases.

Select the security level appropriate for your bar code quality.

Linear Security Level 1

The scanner must read the following code types twice before decoding:

<table>
<thead>
<tr>
<th>Code Type</th>
<th>Length</th>
</tr>
</thead>
<tbody>
<tr>
<td>Codabar</td>
<td>All</td>
</tr>
<tr>
<td>MSI</td>
<td>4 or less</td>
</tr>
<tr>
<td>D 2 of 5</td>
<td>8 or less</td>
</tr>
<tr>
<td>I 2 of 5</td>
<td>8 or less</td>
</tr>
</tbody>
</table>

*Linear Security Level 1 (0x01)*

Linear Security Level 2

The scanner must read all code types twice before decoding.

Linear Security Level 2 (0x02)*
Linear Security Level 3

The scanner must read code types other than the following twice before decoding. It must read the following codes three times:

<table>
<thead>
<tr>
<th>Code Type</th>
<th>Length</th>
</tr>
</thead>
<tbody>
<tr>
<td>MSI</td>
<td>4 or less</td>
</tr>
<tr>
<td>D 2 of 5</td>
<td>8 or less</td>
</tr>
<tr>
<td>I 2 of 5</td>
<td>8 or less</td>
</tr>
</tbody>
</table>

Linear Security Level 4

The scanner must read all code types three times before decoding.

Bi-directional Redundancy

Parameter # 0x43

This parameter is only valid when a Linear Code Type Security Level is enabled. When this parameter is enabled, the scanner must scan a bar code successfully in both directions (forward and reverse) before decoding.

Enable Bi-directional Redundancy
(0x01)

*Disable Bi-directional Redundancy
(0x00)
Data Options

Transmit Code ID Character

Parameter # 0x2D

A code ID character identifies the code type of a scanned bar code. This can be useful when decoding more than one code type. The code ID character is inserted between the prefix character (if selected) and the decoded symbol.

Select no code ID character, a Symbol Code ID character, or an AIM Code ID character. The Symbol Code ID characters are listed below. See Appendix B, Programming Reference for AIM Code Identifiers.

- A = UPC-A, UPC-E, UPC-E1, EAN-8, EAN-13
- B = Code 39, Code 32
- C = Codabar
- D = Code 128, ISBT 128
- E = Code 93
- F = Interleaved 2 of 5
- G = Discrete 2 of 5
- J = MSI
- K = GS1-DataBar
- L = Bookland EAN
- M = Trioptic Code 39
- N = Coupon Code
- R = GS1 DataBar Omnidirectional (formerly GS1 DataBar-14), GS1 DataBar Limited, GS1 DataBar Expanded.
Prefix/Suffix Values

Parameter # P = 0x69, S1 = 0x68, S2 = 0x6A

Append a prefix and/or one or two suffixes to scan data for data editing. To set these values, scan a four-digit number (i.e., four bar codes) that corresponds to ASCII values. See Table B-6 on page B-7 and Numeric Bar Codes on page 4-49. To change the selection or cancel an incorrect entry, scan Cancel on page 4-51. To set the Prefix/Suffix values via serial commands, see Setting Prefixes and Suffixes on page B-7.

**NOTE** In order to use Prefix/Suffix values, set the Scan Data Transmission Format on page 3-18.

**NOTE** The CS3000 series scanner does not support ADF, however it does allow setting prefix and suffix values via parameter bar codes.
Scan Data Transmission Format

Parameter # 0xEB

To change the Scan Data Transmission Format, scan one of the following bar codes corresponding to the desired format.

- **Data As Is**
  - (0x00)

- **<DATA> <SUFFIX 1>**
  - (0x01)

- **<DATA> <SUFFIX 2>**
  - (0x02)

- **<DATA> <SUFFIX 1> <SUFFIX 2>**
  - (0x03)
Scan Data Transmission Format (continued)

<PREFIX> <DATA> 
(0x04)

<PREFIX> <DATA> <SUFFIX 1> 
(0x05)

<PREFIX> <DATA> <SUFFIX 2> 
(0x06)

<PREFIX> <DATA> <SUFFIX 1> <SUFFIX 2> 
(0x07)
Send Versions

**Firmware Version**
Scan the following bar code to send the firmware version to the host.

![Firmware Version](image1)

**Bluetooth Version**
Scan the following bar code to send the Bluetooth version to the host.

![Bluetooth Version](image2)

**Scan Engine Version**
Scan the following bar code to send the scan engine version to the host.

![Scan Engine Version](image3)
Save Configuration

Scan the following bar code after setting parameters to save the new configuration selections.

Save Configuration
CHAPTER 4 SYMBOLOGIES

Introduction

This chapter describes symbology features and provides the programming bar codes for selecting these features for the scanner. Before programming, follow the instructions in Chapter 1, Getting Started.

The scanner ships with the settings in Table 4-1 on page 4-2 (also see Appendix A, Standard Default Parameters for all scanner defaults). If the default values suit requirements, programming is not necessary. Set a feature value by scanning a single bar code or a short bar code sequences. To return all features to default values, scan Reset on page 3-4.

Scanning Sequence Examples

In most cases, scan only one bar code to set a parameter value. For example, to transmit bar code data without the UPC-A check digit, scan the Do Not Transmit UPC-A Check Digit bar code under Transmit UPC-A Check Digit on page 4-14. The scanner issues a fast warble beep and the LED turns green, indicating a successful parameter entry.

Other parameters, such as Set Length(s) for D 2 of 5 require scanning several bar codes in sequence. See the parameter description for this procedure.

Errors While Scanning

Unless otherwise specified, to correct an error during a scanning sequence, re-scan the correct parameter.
Symbology Default Parameters

Table 4-1 lists the defaults for all symbologies parameters. To change any option, scan the appropriate bar code(s) in this chapter.

**NOTE**  See Appendix A, Standard Default Parameters for all default parameters.

Enable/Disable All Code Types

To disable all symbologies, scan Disable All Code Types below. This is useful when enabling only a few code types.

Scan Enable All Code Types turn on (enable) all code types. This is useful when you want to read all codes, or when you want to disable only a few code types.
UPC/EAN

Enable/Disable UPC-A

Parameter # 0x01

To enable or disable UPC-A, scan the appropriate bar code below.

*Enable UPC-A
(0x01)

Disable UPC-A
(0x00)

Enable/Disable UPC-E

Parameter # 0x02

To enable or disable UPC-E, scan the appropriate bar code below.

*Enable UPC-E
(0x01)

Disable UPC-E
(0x00)
Enable/Disable UPC-E1

Parameter # 0x0C

To enable or disable UPC-E1, scan the appropriate bar code below.

✔️ **NOTE**  UPC-E1 is not a UCC (Uniform Code Council) approved symbology.

Enable UPC-E1
(0x01)

*Disable UPC-E1
(0x00)

Enable/Disable EAN-8

Parameter # 0x04

To enable or disable EAN-8, scan the appropriate bar code below.

*Enable EAN-8
(0x01)

Disable EAN-8
(0x00)
Enable/Disable EAN-13

Parameter # 0x03

To enable or disable EAN-13, scan the appropriate bar code below.

*Enable EAN-13 (0x01)

Disable EAN-13 (0x00)

Enable/Disable Bookland EAN

Parameter # 0x53

To enable or disable EAN Bookland, scan the appropriate bar code below.

Enable Bookland EAN (0x01)

*Disable Bookland EAN (0x00)

NOTE If you enable Bookland EAN, select a Bookland ISBN Format on page 4-20. Also select either Decode UPC/EAN Supplementals, Autodiscriminate UPC/EAN Supplementals, or Enable 978/979 Supplemental Mode in Decode UPC/EAN Supplementals on page 4-9.
Decode UPC/EAN Supplementals

Parameter # 0x10

Supplementals are bar codes appended according to specific format conventions (e.g., UPC A+2, UPC E+2, EAN 13+2). The following options are available:

- If you select **Ignore UPC/EAN Supplementals**, and the scanner is presented with a UPC/EAN plus supplemental symbol, the scanner decodes UPC/EAN and ignores the supplemental characters.

- If you select **Decode UPC/EAN with Supplementals**, the scanner only decodes UPC/EAN symbols with supplemental characters, and ignores symbols without supplementals.

- If you select **Autodiscriminate UPC/EAN Supplementals**, the scanner decodes UPC/EAN symbols with supplemental characters immediately. If the symbol does not have a supplemental, the scanner must decode the bar code the number of times set via **Decode UPC/EAN Supplemental Redundancy on page 4-13** before transmitting its data to confirm that there is no supplemental.

- If you select one of the following **Supplemental Mode** options, the scanner immediately transmits EAN-13 bar codes starting with that prefix that have supplemental characters. If the symbol does not have a supplemental, the scanner must decode the bar code the number of times set via **Decode UPC/EAN Supplemental Redundancy on page 4-13** before transmitting its data to confirm that there is no supplemental. The scanner transmits UPC/EAN bar codes that do not have that prefix immediately.
  - Enable 378/379 Supplemental Mode.
  - Enable 978/979 Supplemental Mode.

**NOTE** If you select 978/979 Supplemental Mode and are scanning Bookland EAN bar codes, see **Enable/Disable Bookland EAN on page 4-8** to enable Bookland EAN, and select a format using **Bookland ISBN Format on page 4-20**.

- Enable 977 Supplemental Mode.
- Enable 414/419/434/439 Supplemental Mode.
- Enable 491 Supplemental Mode.
- Enable **Smart Supplemental Mode** - applies to EAN-13 bar codes starting with any prefix listed previously.

  - **Supplemental User-Programmable Type 1** - applies to EAN-13 bar codes starting with a 3-digit user-defined prefix. Set this 3-digit prefix using **User-Programmable Supplementals on page 4-13**.

  - **Supplemental User-Programmable Type 1 and 2** - applies to EAN-13 bar codes starting with either of two 3-digit user-defined prefixes. Set the 3-digit prefixes using **User-Programmable Supplementals on page 4-13**.

  - **Smart Supplemental Plus User-Programmable 1** - applies to EAN-13 bar codes starting with any prefix listed previously or the user-defined prefix set using **User-Programmable Supplementals on page 4-13**.

  - **Smart Supplemental Plus User-Programmable 1 and 2** - applies to EAN-13 bar codes starting with any prefix listed previously or one of the two user-defined prefixes set using **User-Programmable Supplementals on page 4-13**.

**NOTE** To minimize the risk of invalid data transmission, select either to decode or ignore supplemental characters.
Decode UPC/EAN Supplementals (continued)

Select the desired option by scanning one of the following bar codes.

- Decode UPC/EAN Supplementals
  (0x01)

- *Ignore UPC/EAN With Supplementals
  (0x00)

- Autodiscriminate UPC/EAN Supplementals
  (0x02)

- Enable 378/379 Supplemental Mode
  (0x04)

- Enable 978/979 Supplemental Mode
  (0x05)
Decode UPC/EAN Supplementals (continued)

Enable 977 Supplemental Mode
(0x07)

Enable 414/419/434/439 Supplemental Mode
(0x06)

Enable 491 Supplemental Mode
(0x08)

Enable Smart Supplemental Mode
(0x03)
Decode UPC/EAN Supplementals (continued)

- Supplemental User-Programmable Type 1 (0x09)

- Supplemental User-Programmable Type 1 and 2 (0x0A)

- Smart Supplemental Plus User-Programmable 1 (0x0B)

- Smart Supplemental Plus User-Programmable 1 and 2 (0x0C)
**User-Programmable Supplementals**

**Supplemental 1: Parameter # 0xF1 0x43**

**Supplemental 2: Parameter # 0xF1 0x44**

If you selected a Supplemental User-Programmable option from *Decode UPC/EAN Supplementals on page 4-9*, select **User-Programmable Supplemental 1** to set the 3-digit prefix. Then select the 3 digits using the *Numeric Bar Codes on page 4-49*. Select **User-Programmable Supplemental 2** to set a second 3-digit prefix. Then select the 3 digits using the *Numeric Bar Codes on page 4-49*.

---

**Decode UPC/EAN Supplemental Redundancy**

**Parameter # 0x50**

With **Autodiscriminate UPC/EAN Supplementals** selected, this option adjusts the number of times a symbol without supplementals are decoded before transmission. The range is from 2 to 30 times. Five or above is recommended when decoding a mix of UPC/EAN symbols with and without supplementals, and the autodiscriminate option is selected.

Scan the bar code below to select a decode redundancy value. Next scan two bar codes from *Numeric Bar Codes on page 4-49*. Single digit numbers must have a leading zero. To change the selection or cancel an incorrect entry, scan *Cancel on page 4-51*.
Transmit UPC-A Check Digit

Parameter # 0x28

Scan the appropriate bar code below to transmit the symbol with or without the UPC-A check digit.

*Transmit UPC-A Check Digit
(0x01)

Do Not Transmit UPC-A Check Digit
(0x00)

Transmit UPC-E Check Digit

Parameter # 0x29

Scan the appropriate bar code below to transmit the symbol with or without the UPC-E check digit.

*Transmit UPC-E Check Digit
(0x01)

Do Not Transmit UPC-E Check Digit
(0x00)
Transmit UPC-E1 Check Digit

Parameter # 0x2A

Scan the appropriate bar code below to transmit the symbol with or without the UPC-E1 check digit.

*Transmit UPC-E1 Check Digit (0x01)

Do Not Transmit UPC-E1 Check Digit (0x00)

UPC-A Preamble

Parameter # 0x22

Preamble characters (Country Code and System Character) can be transmitted as part of a UPC-A symbol. Select one of the following options for transmitting UPC-A preamble to the host device: transmit system character only, transmit system character and country code ("0" for USA), or transmit no preamble.

No Preamble (<DATA>) (0x00)

*System Character (<SYSTEM CHARACTER> <DATA>) (0x01)

System Character & Country Code (< COUNTRY CODE> <SYSTEM CHARACTER> <DATA>) (0x02)
UPC-E Preamble

Parameter # 0x23

Preamble characters (Country Code and System Character) can be transmitted as part of a UPC-E symbol. Select one of the following options for transmitting UPC-E preamble to the host device: transmit system character only, transmit system character and country code ("0" for USA), or transmit no preamble.

- **No Preamble**
  
  `<DATA>`
  
  (0x00)

- **System Character**
  
  `<SYSTEM CHARACTER> <DATA>`
  
  (0x01)

- **System Character & Country Code**
  
  `<COUNTRY CODE> <SYSTEM CHARACTER> <DATA>`
  
  (0x02)
UPC-E1 Preamble

Parameter # 0x24

Preamble characters (Country Code and System Character) can be transmitted as part of a UPC-E1 symbol. Select one of the following options for transmitting UPC-E1 preamble to the host device: transmit system character only, transmit system character and country code ("0" for USA), or transmit no preamble.

No Preamble
(<DATA>)
(0x00)

*System Character
(<SYSTEM CHARACTER> <DATA>)
(0x01)

System Character & Country Code
(<COUNTRY CODE> <SYSTEM CHARACTER> <DATA>)
(0x02)
**Convert UPC-E to UPC-A**

**Parameter # 0x25**

Enable this parameter to convert UPC-E (zero suppressed) decoded data to UPC-A format before transmission. After conversion, data follows UPC-A format and is affected by UPC-A programming selections (e.g., Preamble, Check Digit).

Scan **DO NOT CONVERT UPC-E TO UPC-A** to transmit UPC-E (zero suppressed) decoded data.

![Barcode Image]

Convert UPC-E to UPC-A (Enable)
(0x01)

![Barcode Image]

*Do Not Convert UPC-E to UPC-A (Disable)
(0x00)

**Convert UPC-E1 to UPC-A**

**Parameter # 0x26**

Enable this parameter to convert UPC-E1 (zero suppressed) decoded data to UPC-A format before transmission. After conversion, data follows UPC-A format and is affected by UPC-A programming selections (e.g., Preamble, Check Digit).

Scan **DO NOT CONVERT UPC-E TO UPC-A** to transmit UPC-E1 (zero suppressed) decoded data.

![Barcode Image]

Convert UPC-E1 to UPC-A (Enable)
(0x01)

![Barcode Image]

*Do Not Convert UPC-E1 to UPC-A (Disable)
(0x00)
EAN Zero Extend

Parameter # 0x27

When enabled, this parameter adds five leading zeros to decoded EAN-8 symbols to make them compatible in format to EAN-13 symbols.

Disable this parameter to transmit EAN-8 symbols as is.

Enable EAN Zero Extend (0x01)

*Disable EAN Zero Extend (0x00)
Bookland ISBN Format

Parameter # 0xF1 0x40

If you enabled Bookland EAN using *Enable/Disable Bookland EAN on page 4-8*, select one of the following formats for Bookland data:

- **Bookland ISBN-10** - The scanner reports Bookland data starting with 978 in traditional 10-digit format with the special Bookland check digit for backward-compatibility. Data starting with 979 is not considered Bookland in this mode.

*Bookland ISBN-10 (0x00)*

*Bookland ISBN-13 (0x01)*

**NOTE**  For Bookland EAN to function properly, first enable Bookland EAN using *Enable/Disable Bookland EAN on page 4-8*, then select either Decode UPC/EAN Supplementals, Autodiscriminate UPC/EAN Supplementals, or Enable 978/979 Supplemental Mode in *Decode UPC/EAN Supplementals on page 4-9*. 
UPC/EAN Security Level

Parameter # 0x4D

The CS3070 offers four levels of decode security for UPC/EAN bar codes. Increasing levels of security are provided for decreasing levels of bar code quality. Select higher levels of security for decreasing levels of bar code quality. Increasing security decreases the scanner’s aggressiveness, so choose only that level of security necessary for the application.

**UPC/EAN Security Level 0**

This default setting allows the scanner to operate in its most aggressive state, while providing sufficient security in decoding most “in-spec” UPC/EAN bar codes.

![UPC/EAN Security Level 0](image)

*UPC/EAN Security Level 0 (0x00)*

**UPC/EAN Security Level 1**

As bar code quality levels diminish, certain characters become prone to mis-decodes before others (i.e., 1, 2, 7, 8). If mis-decodes of poorly printed bar codes occur, and the mis-decodes are limited to these characters, select this security level.

![UPC/EAN Security Level 1](image)

UPC/EAN Security Level 1 (0x01)

**UPC/EAN Security Level 2**

If mis-decodes of poorly printed bar codes occur, and the mis-decodes are not limited to characters 1, 2, 7, and 8, select this security level.

![UPC/EAN Security Level 2](image)

UPC/EAN Security Level 2 (0x02)

**UPC/EAN Security Level 3**

If misdecodes still occur after selecting Security Level 2, select this security level. Be advised, selecting this option is an extreme measure against mis-decoding severely out of spec bar codes. Selection of this level of security significantly impairs the decoding ability of the scanner. If this level of security is necessary, try to improve the quality of the bar codes.

![UPC/EAN Security Level 3](image)

UPC/EAN Security Level 3 (0x03)
**UCC Coupon Extended Code**

**Parameter # 0x55**

The UCC Coupon Extended Code is an additional bar code adjacent to a UCC Coupon Code. To enable or disable UCC Coupon Extended Code, scan the appropriate bar code below.

- Enable UCC Coupon Extended Code
  (0x01)

- Disable UCC Coupon Extended Code
  (0x00)

---

**Code 128**

**Enable/Disable Code 128**

**Parameter # 0x08**

To enable or disable Code 128, scan the appropriate bar code below.

- *Enable Code 128
  (0x01)

- Disable Code 128
  (0x00)
Enable/Disable GS1-128 (formerly UCC/EAN-128)

Parameter # 0x0E

To enable or disable GS1-128, scan the appropriate bar code below. See Appendix B, Programming Reference for details on GS1-128 (formerly UCC/EAN-128).

- Enable GS1-128 (0x01)
- Disable GS1-128 (0x00)

Enable/Disable ISBT 128

Parameter # 0x54

To enable or disable ISBT 128, scan the appropriate bar code below.

- Enable ISBT 128 (0x01)
- Disable ISBT 128 (0x00)

Lengths for Code 128

No length setting is required for Code 128.
**Code 39**

**Enable/Disable Code 39**

**Parameter # 0x00**

To enable or disable Code 39, scan the appropriate bar code below.

- **Enable Code 39**
  - (0x01)

- **Disable Code 39**
  - (0x00)

**Enable/Disable Trioptic Code 39**

**Parameter # 0x0D**

Trioptic Code 39 is a variant of Code 39 used in marking computer tape cartridges. Trioptic Code 39 symbols always contain six characters.

To enable or disable Trioptic Code 39, scan the appropriate bar code below.

- **Enable Trioptic Code 39**
  - (0x01)

- **Disable Trioptic Code 39**
  - (0x00)

Convert Code 39 to Code 32 (Italian Pharma Code)

Parameter # 0x56

Code 32 is a variant of Code 39 used by the Italian pharmaceutical industry. Scan the appropriate bar code below to enable or disable converting Code 39 to Code 32.

✓  NOTE  Code 39 must be enabled in order for this parameter to function.

*Enable Convert Code 39 to Code 32 (0x01)*

*Disable Convert Code 39 to Code 32 (0x00)*

Code 32 Prefix

Parameter # 0xE7

Enable this parameter to add the prefix character A to all Code 32 bar codes. Enable Convert Code 39 to Code 32 (Italian Pharma Code) in order for this parameter to function.

*Enable Code 32 Prefix (0x01)*

*Disable Code 32 Prefix (0x00)*
Set Lengths for Code 39

Parameter # L1 = 0x12, L2 = 0x13

The length of a code refers to the number of characters (i.e., human readable characters), including check digit(s) the code contains. Set lengths for Code 39 to any length, one or two discrete lengths, or lengths within a specific range. If you enabled Code 39 Full ASCII, Length Within a Range or Any Length are the preferred options.

**NOTE** When setting lengths, include a leading zero for single digit numbers.

One Discrete Length - This option limits decodes to Code 39 symbols containing a selected length. Select lengths using the Numeric Bar Codes on page 4-49. For example, to decode only Code 39 symbols with 14 characters, scan Code 39 - One Discrete Length, then scan 1, then 4. To change the selection or cancel an incorrect entry, scan the Cancel on page 4-51.

Two Discrete Lengths - This option limits decodes to Code 39 symbols containing either of two selected lengths. Select lengths using the Numeric Bar Codes on page 4-49. For example, to decode only Code 39 symbols containing either 2 or 14 characters, select Code 39 - Two Discrete Lengths, then scan 0, 2, 1, and then 4. To change the selection or cancel an incorrect entry, scan Cancel on page 4-51.

Length Within Range - This option limits decodes to Code 39 symbols within a specified range. For example, to decode Code 39 symbols containing between 4 and 12 characters, first scan Code 39 - Length Within Range. Then scan 0, 4, 1, and 2. Select lengths using the Numeric Bar Codes on page 4-49. To change the selection or cancel an incorrect entry, scan Cancel on page 4-51.

Any Length - Scan this option to decode Code 39 symbols containing any number of characters.
Code 39 Check Digit Verification

Parameter # 0x30

Enable this feature to check the integrity of all Code 39 symbols to verify that the data complies with a specified check digit algorithm. Only Code 39 symbols that include a modulo 43 check digit are decoded, so only enable this if your Code 39 symbols contain a modulo 43 check digit.

Verify Code 39 Check Digit (0x01)

*Do Not Verify Code 39 Check Digit (0x00)

Transmit Code 39 Check Digit

Parameter # 0x2B

Scan this bar code to transmit the check digit with the data.

Transmit Code 39 Check Digit (Enable) (0x01)

Scan this bar code to transmit data without the check digit.

*Do Not Transmit Code 39 Check Digit (Disable) (0x00)
Enable/Disable Code 39 Full ASCII

Parameter # 0x11

Code 39 Full ASCII is a variant of Code 39 which pairs characters to encode the full ASCII character set. To enable or disable Code 39 Full ASCII, scan the appropriate bar code below.

See Table B-6 on page B-7 for mapping Code 39 characters to ASCII values.

![Enable Code 39 Full ASCII](0x00)

![Disable Code 39 Full ASCII](0x00)

**NOTE** You cannot enable Trioptic Code 39 and Code 39 Full ASCII simultaneously. If the scanner issues an error beep when enabling Code 39 Full ASCII, disable Trioptic Code 39 and try again.
**Code 93**

**Enable/Disable Code 93**

**Parameter # 0x09**

To enable or disable Code 93, scan the appropriate bar code below.

Enable Code 93
(0x01)

*Disable Code 93
(0x00)

**Set Lengths for Code 93**

**Parameter # L1 = 0x1A, L2 = 0x1B**

The length of a code refers to the number of characters (i.e., human readable characters), including check digit(s) the code contains. Set lengths for Code 93 to any length, one or two discrete lengths, or lengths within a specific range.

**One Discrete Length** - Select this option to decode only codes containing a selected length. For example, select **Code 93 One Discrete Length**, then scan the bar codes 1, 4 from *Numeric Bar Codes on page 4-49* to limit the decoding to Code 93 symbols containing 14 characters. To change the selection or cancel an incorrect entry, scan *Cancel on page 4-51.*
Two Discrete Lengths - Select this option to decode only codes containing two selected lengths. For example, select **Code 93 Two Discrete Lengths**, then scan `0, 2, 1, 4` from *Numeric Bar Codes on page 4-49* to limit the decoding to Code 93 symbols containing 2 or 14 characters. To change the selection or cancel an incorrect entry, scan **Cancel on page 4-51**.

![Code 93 - Two Discrete Lengths](image)

Length Within Range - Select this option to decode a code type within a specified range. For example, to decode Code 93 symbols containing between 4 and 12 characters, first scan **Code 93 Length Within Range**, then scan `0, 4, 1` and `2` (include a leading zero for single digit numbers) from *Numeric Bar Codes on page 4-49*. To change the selection or cancel an incorrect entry, scan **Cancel on page 4-51**.

![Code 93 - Length Within Range](image)

Any Length - Scan this option to decode Code 93 symbols containing any number of characters.

![Code 93 - Any Length](image)
**Code 11**

**Enable/Disable Code 11**

**Parameter # 0x0A**

To enable or disable Code 11, scan the appropriate bar code below.

![Enable Code 11](0x01)

*Disable Code 11* (0x00)

**Set Lengths for Code 11**

**Parameter # L1 = 0x1C, L2 = 0x1D**

The length of a code refers to the number of characters (i.e., human readable characters), including check digit(s) the code contains. Set lengths for Code 11 to any length, one or two discrete lengths, or lengths within a specific range.

- **One Discrete Length** - Select this option to decode only Code 11 symbols containing a selected length. Select the length using the bar codes from **Numeric Bar Codes on page 4-49**. For example, to decode only Code 11 symbols with 14 characters, scan **Code 11 - One Discrete Length**, then scan 1, then 4. To correct an error or to change the selection, scan **Cancel on page 4-51**.

- **Two Discrete Lengths** - Select this option to decode only Code 11 symbols containing either of two selected lengths. Select lengths using the bar codes from **Numeric Bar Codes on page 4-49**. For example, to decode only Code 11 symbols containing either 2 or 14 characters, select **Code 11 - Two Discrete Lengths**, then scan 0, 2, 1, and 4. To correct an error or to change the selection, scan **Cancel on page 4-51**.

- **Length Within Range** - Select this option to decode a Code 11 symbol with a specific length range. Select lengths using the bar codes from **Numeric Bar Codes on page 4-49**. For example, to decode Code 11 symbols containing between 4 and 12 characters, first scan **Code 11 - Length Within Range**. Then scan 0, 4, 1, and 2 (include a leading zero for single digit numbers). To correct an error or change the selection, scan **Cancel on page 4-51**.

- **Any Length** - Scan this option to decode Code 11 symbols containing any number of characters within the scanner's capability.
Set Lengths for Code 11 (continued)

Code 11 - One Discrete Length

Code 11 - Two Discrete Lengths

Code 11 - Length Within Range

Code 11 - Any Length
**Code 11 Check Digit Verification**

**Parameter # 0x34**

This feature allows the scanner to check the integrity of all Code 11 symbols to verify that the data complies with the specified check digit algorithm. This selects the check digit mechanism for the decoded Code 11 bar code. The options are to check for one check digit, check for two check digits, or disable the feature.

To enable this feature, scan the bar code below corresponding to the number of check digits encoded in your Code 11 symbols.

![Bar Code Example](Image)

One Check Digit  
(0x01)

![Bar Code Example](Image)

Two Check Digits  
(0x02)
Transmit Code 11 Check Digits

Parameter # 0x2F

This feature selects whether or not to transmit the Code 11 check digit(s).

- **Transmit Code 11 Check Digit(s) (Enable)**
  
  ![Barcode Image](image1)

  
  Transmit Code 11 Check Digit(s) (Enable)
  
  (0x01)

- **Do Not Transmit Code 11 Check Digit(s) (Disable)**
  
  ![Barcode Image](image2)

  
  *Do Not Transmit Code 11 Check Digit(s) (Disable)
  
  (0x00)

**NOTE** Code 11 Check Digit Verification must be enabled for this parameter to function.

---

Interleaved 2 of 5

**Enable/Disable Interleaved 2 of 5**

Parameter # 0x06

To enable or disable Interleaved 2 of 5, scan the appropriate bar code below.

- **Enable Interleaved 2 of 5**
  
  ![Barcode Image](image3)

  
  *Enable Interleaved 2 of 5
  
  (0x01)

- **Disable Interleaved 2 of 5**
  
  ![Barcode Image](image4)

  
  Disable Interleaved 2 of 5
  
  (0x00)
Set Lengths for Interleaved 2 of 5

Parameter # L1 = 0x16, L2 = 0x17

The length of a code refers to the number of characters (i.e., human readable characters), including check digit(s) the code contains. Lengths for I 2 of 5 may be set for any length, one or two discrete lengths, or lengths within a specific range. To set lengths via serial commands, see Setting Code Lengths Via Serial Commands on page B-8.

NOTE When setting lengths, single digit numbers must always be preceded by a leading zero.

One Discrete Length - Select this option to decode only codes containing a selected length. For example, select I 2 of 5 One Discrete Length, then scan 1, 4 to decode only I 2 of 5 symbols containing 14 characters. Select the length using the bar codes from Numeric Bar Codes on page 4-49. To change the selection or cancel an incorrect entry, scan Cancel on page 4-51.

Two Discrete Lengths - Select this option to decode only codes containing two selected lengths. For example, select I 2 of 5 Two Discrete Lengths, then scan 0, 6, 1, 4, to decode only I 2 of 5 symbols containing 6 or 14 characters. Select lengths using the bar codes from Numeric Bar Codes on page 4-49. To change the selection or cancel an incorrect entry, scan Cancel on page 4-51.
Set Lengths for Interleaved 2 of 5 (continued)

**Length Within Range** - Select this option to decode only codes within a specified range. For example, to decode I 2 of 5 symbols containing between 4 and 12 characters, first scan **I 2 of 5 Length Within Range**, then scan 0, 4, 1 and 2 (include a leading zero for single digit numbers). Select lengths using the bar codes from *Numeric Bar Codes on page 4-49*. To change the selection or cancel an incorrect entry, scan *Cancel on page 4-51*.

![Barcode Image]

**I 2 of 5 - Length Within Range**

**Any Length** - Scan this option to decode I 2 of 5 symbols containing any number of characters.

![Barcode Image]

**I 2 of 5 - Any Length**

**NOTE** Selecting this option may lead to misdecodes for I 2 of 5 codes.
I 2 of 5 Check Digit Verification

Parameter # 0x31

When enabled, this parameter checks the integrity of an I 2 of 5 symbol to ensure it complies with a specified algorithm, either USS (Uniform Symbology Specification), or OPCC (Optical Product Code Council).

*Disable (0x00)

USS Check Digit (0x01)

OPCC Check Digit (0x02)

Transmit I 2 of 5 Check Digit

Parameter # 0x2C

Scan one of the following bar codes to select whether to transmit data with or without the check digit.

Transmit I 2 of 5 Check Digit (Enable) (0x01)

*Do Not Transmit I 2 of 5 Check Digit (Disable) (0x00)
Convert I 2 of 5 to EAN-13

Parameter # 0x52

This parameter converts a 14 character I 2 of 5 code into EAN-13, and transmits to the host as EAN-13. To accomplish this, first enable I 2 of 5, set one length to 14, and include a leading zero and a valid EAN-13 check digit in the code.

**Convert I 2 of 5 to EAN-13 (Enable)**
(0x01)

**Do Not Convert I 2 of 5 to EAN-13 (Disable)**
(0x00)

Discrete 2 of 5

Enable/Disable Discrete 2 of 5

Parameter # 0x05

To enable or disable Discrete 2 of 5, scan the appropriate bar code below.

**Enable Discrete 2 of 5**
(0x01)

**Disable Discrete 2 of 5**
(0x00)
Set Lengths for Discrete 2 of 5

Parameter # L1 = 0x14, L2 = 0x15

The length of a code refers to the number of characters (i.e., human readable characters), including check digit(s) the code contains. Set lengths for D 2 of 5 to any length, one or two discrete lengths, or lengths within a specific range.

**One Discrete Length** - Select this option to decode only codes containing a selected length. For example, select **D 2 of 5 One Discrete Length**, then scan **1, 4** to decode only D 2 of 5 symbols containing 14 characters. Select the length using the bar codes from [Numeric Bar Codes on page 4-49](#). To change the selection or cancel an incorrect entry, scan **Cancel on page 4-51**.

**D 2 of 5 - One Discrete Length**

**Two Discrete Lengths** - Select this option to decode only codes containing two selected lengths. For example, select **D 2 of 5 Two Discrete Lengths**, then scan **0, 2, 1, 4**, to decode only D 2 of 5 symbols containing 2 or 14 characters. Select lengths using the bar codes from [Numeric Bar Codes on page 4-49](#). To change the selection or cancel an incorrect entry, scan **Cancel on page 4-51**.

**D 2 of 5 - Two Discrete Lengths**

**Length Within Range** - Select this option to decode codes within a specified range. For example, to decode D 2 of 5 symbols containing between 4 and 12 characters, first scan **D 2 of 5 Length Within Range**, then scan **0, 4, 1, 2** (include a leading zero for single digit numbers). Select lengths using the bar codes from [Numeric Bar Codes on page 4-49](#). To change the selection or cancel an incorrect entry, scan **Cancel on page 4-51**.

**D 2 of 5 - Length Within Range**

**Any Length** - Scan this option to decode D 2 of 5 symbols containing any number of characters.

**NOTE** Selecting this option may lead to misdecodes for D 2 of 5 codes.

**D 2 of 5 - Any Length**
Chinese 2 of 5

Enable/Disable Chinese 2 of 5

Parameter # 0xF0 0x98

To enable or disable Chinese 2 of 5, scan the appropriate bar code below.

Enable Chinese 2 of 5
(0x01)

*Disable Chinese 2 of 5
(0x00)

Codabar

Enable/Disable Codabar

Parameter # 0x07

To enable or disable Codabar, scan the appropriate bar code below.

Enable Codabar
(0x01)

*Disable Codabar
(0x00)
Set Lengths for Codabar

**Parameter # L1 = 0x18, L2 = 0x19**

The length of a code refers to the number of characters (i.e., human readable characters), including check digit(s) the code contains. Set lengths for Codabar to any length, one or two discrete lengths, or lengths within a specific range.

**One Discrete Length** - Select this option to decode only codes containing a selected length. For example, select **Codabar One Discrete Length**, then scan 1, 4, to decode only Codabar symbols containing 14 characters. Select the length using the bar codes from *Numeric Bar Codes on page 4-49*. To change the selection or cancel an incorrect entry, scan **Cancel on page 4-51**.

**Codabar - One Discrete Length**

**Two Discrete Lengths** - Select this option to decode only codes containing two selected lengths. For example, select **Codabar Two Discrete Lengths**, then scan 0, 2, 1, 4, to decode only Codabar symbols containing 6 or 14 characters. Select lengths using the bar codes from *Numeric Bar Codes on page 4-49*. To change the selection or cancel an incorrect entry, scan **Cancel on page 4-51**.

**Codabar - Two Discrete Lengths**

**Length Within Range** - Select this option to decode a code within a specified range. For example, to decode Codabar symbols containing between 4 and 12 characters, first scan **Codabar Length Within Range**, then scan 0, 4, 1 and 2 (include a leading zero for single digit numbers). Select lengths using the bar codes from *Numeric Bar Codes on page 4-49*. To change the selection or cancel an incorrect entry, scan **Cancel on page 4-51**.

**Codabar - Length Within Range**

**Any Length** - Scan this option to decode Codabar symbols containing any number of characters.

**Codabar - Any Length**
**CLSI Editing**

**Parameter # 0x36**

Enable this to strip the start and stop characters and insert a space after the first, fifth, and tenth characters of a 14-character Codabar symbol.

*NOTE*  Symbol length does not include start and stop characters.

Enable CLSI Editing  
(0x01)

*Disable CLSI Editing  
(0x00)

**NOTIS Editing**

**Parameter # 0x37**

Enable this to strip the start and stop characters from decoded Codabar symbol.

Enable NOTIS Editing  
(0x01)

*Disable NOTIS Editing  
(0x00)
MSI

Enable/Disable MSI

Parameter # 0x0B

To enable or disable MSI, scan the appropriate bar code below.

Enable MSI
(0x01)

*Disable MSI
(0x00)
Set Lengths for MSI

Parameter # L1 = 0x1E, L2 = 0x1F

The length of a code refers to the number of characters (i.e., human readable characters) the code contains, and includes check digits. Set lengths for MSI to any length, one or two discrete lengths, or lengths within a specific range. See Table B-6 on page B-7 for ASCII equivalents.

One Discrete Length - Select this option to decode only codes containing a selected length. For example, select MSI Plessey One Discrete Length, then scan 1, 4, to decode only MSI Plessey symbols containing 14 characters. Select the length using the bar codes from Numeric Bar Codes on page 4-49. To change the selection or cancel an incorrect entry, scan Cancel on page 4-51.

Two Discrete Lengths - Select this option to decode only codes containing two selected lengths. For example, select MSI Plessey Two Discrete Lengths, then scan 0, 6, 1, 4, to decode only MSI Plessey symbols containing 6 or 14 characters. Select lengths using the bar codes from Numeric Bar Codes on page 4-49. To change the selection or cancel an incorrect entry, scan Cancel on page 4-51.

Length Within Range - Select this option to decode codes within a specified range. For example, to decode MSI symbols containing between 4 and 12 characters, first scan MSI Length Within Range, then scan 0, 4, 1 and 2 (include a leading zero for single digit numbers). Select lengths using the bar codes from Numeric Bar Codes on page 4-49. To change the selection or cancel an incorrect entry, scan Cancel on page 4-51.

Any Length - Scan this option to decode MSI Plessey symbols containing any number of characters.

NOTE Selecting this option may lead to misdecodes for MSI codes.
**MSI Check Digits**

**Parameter # 0x32**

These check digits at the end of the bar code verify the integrity of the data. At least one check digit is always required. Check digits are not automatically transmitted with the data.

If you select two check digits, also select an *MSI Check Digit Algorithm on page 4-46.*

*One MSI Check Digit (0x00)*

![Barcode Image]

Two MSI Check Digits (0x01)

![Barcode Image]

**Transmit MSI Check Digit**

**Parameter # 0x2E**

Scan one of the following bar codes to select whether to transmit data with or without the check digit.

Transmit MSI Check Digit (Enable) (0x01)

![Barcode Image]

*Do Not Transmit MSI Check Digit (Disable) (0x00)*

![Barcode Image]
MSI Check Digit Algorithm

Parameter # 0x33

If MSI Check Digits on page 4-45 is set to Two, an additional verification is required to ensure integrity. Select one of the following algorithms.

- MOD 11/ MOD 10 (0x00)

- *MOD 10/ MOD 10 (0x01)

GS1 DataBar

Enable/Disable GS1 DataBar Omnidirectional (formerly GS1 DataBar-14)

Parameter # 0xF0 0x52

To enable or disable GS1 DataBar Omnidirectional, scan the appropriate bar code below.

- Enable GS1 DataBar Omnidirectional (0x01)

- *Disable GS1 DataBar Omnidirectional (0x00)
Enable/Disable GS1 DataBar Limited

Parameter # 0xF0 0x53

To enable or disable GS1 DataBar Limited, scan the appropriate bar code below.

Enable GS1 DataBar Limited
(0x01)

*Disable GS1 DataBar Limited
(0x00)

Enable/Disable GS1 DataBar Expanded

Parameter # 0xF0 0x54

To enable or disable GS1 DataBar Expanded, scan the appropriate bar code below.

Enable GS1 DataBar Expanded
(0x01)

*Disable GS1 DataBar Expanded
(0x00)
Convert GS1 DataBar to UPC/EAN

Parameter # 0xF0 0x8D

This parameter only applies to GS1 DataBar Omnidirectional and GS1 DataBar Limited symbols. Enable this conversion to strip the leading 010 from GS1 DataBar Omnidirectional and GS1 DataBar Limited symbols encoding a single zero as the first digit, and report the bar code as EAN-13.

For bar codes beginning with two or more zeros but not six zeros, this conversion strips the leading 0100 and reports the bar code as UPC-A. The UPC-A Preamble parameter to transmit the system character and country code applies to converted bar codes. Note that neither the system character nor the check digit can be stripped.
Numeric Bar Codes

For parameters requiring specific numeric values, use the following bar codes.

**NOTE** These bar codes differ from the *Numeric Bar Codes for PIN Entry on page 1-24* and *Numeric Bar Codes for Date and Time Settings on page 3-6.*

0

2

3

4
Numeric Bar Codes (continued)
Cancel

In case of an error or to change the selection, scan the bar code below.
Introduction

This chapter provides suggested scanner maintenance, troubleshooting, and technical specifications.

Maintenance

Cleaning the scan window is the only maintenance required. A dirty window can affect scanning accuracy.

- Do not allow any abrasive material to touch the window.
- Remove any dirt particles with a damp cloth.
- Wipe the window using a tissue moistened with ammonia/water.
- Do not spray water or other cleaning liquids directly onto the window.
## Troubleshooting

<table>
<thead>
<tr>
<th>Problem</th>
<th>Possible Causes</th>
<th>Possible Solutions</th>
</tr>
</thead>
<tbody>
<tr>
<td>Laser comes on, but scanner does not decode the bar code.</td>
<td>Scanner is not programmed for the correct bar code type.</td>
<td>Ensure the scanner is programmed to read the type of bar code being scanned.</td>
</tr>
<tr>
<td></td>
<td>Bar code symbol is unreadable.</td>
<td>Check the symbol to ensure it is not defaced. Try scanning test bar codes of the same bar code type. See <em>Appendix C, Sample Bar Codes</em> for test bar codes.</td>
</tr>
<tr>
<td></td>
<td>Bar code is out of range of the scanner.</td>
<td>Move scanner closer to or further from bar code.</td>
</tr>
<tr>
<td>Scanner emits long beeps for 5 seconds when scanning a bar code.</td>
<td>Memory is full.</td>
<td>Download bar code data to the host and clear the memory.</td>
</tr>
<tr>
<td>Scanner does not decode the bar code and the LED blinks amber, red, green.</td>
<td>Scanner needs to be reset.</td>
<td>Press the reset button. See <em>Figure 1-1 on page 1-1</em> for the location.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Scan the Restore Defaults bar code below.</td>
</tr>
<tr>
<td>Scanner LED turns solid red for a few seconds.</td>
<td>Battery is low.</td>
<td>Charge the battery. See <em>Charging the Scanner Battery on page 1-3</em>.</td>
</tr>
<tr>
<td>Scanner does not fully charge.</td>
<td>Attempt to charge on a non-powered USB hub.</td>
<td>Connect the scanner to a powered USB hub (5V, 500mA max).</td>
</tr>
</tbody>
</table>
Table 5-1  Troubleshooting (Continued)

<table>
<thead>
<tr>
<th>Problem</th>
<th>Possible Causes</th>
<th>Possible Solutions</th>
</tr>
</thead>
<tbody>
<tr>
<td>Bluetooth LED turns off.</td>
<td>Scanner is out of range of the Bluetooth host.</td>
<td>Move closer to the host and press any key to re-pair with the host.</td>
</tr>
<tr>
<td>Can’t see the scanner drive after connecting scanner to host.</td>
<td>Scanner is mapping to a drive used by another device.</td>
<td>Use Windows’ map drive function to change the scanner drive letter.</td>
</tr>
<tr>
<td>Scanner is unresponsive after performing a live update software download.</td>
<td>Loaded software version less than or equal to PAABCX00-011-RXX (i.e., &lt;= 011) over new software (greater than or equal to PAABCX00-012-RXX, i.e., &gt;= 012) onto a scanner with older hardware (i.e., Samsung flash chip). The software does not boot a component of the flash drive file system so it appears unresponsive.</td>
<td>Manually start the software: Remove the underside cover from the scanner and using a modified paper clip or needle-type tool press and release the reset button (see Figure 1-1 on page 1-1 for the location). Then press the scan (+) button to boot the scanner and execute the old software (i.e., &lt;= 011).</td>
</tr>
</tbody>
</table>

NOTE  If problems still occur, contact the distributor or Zebra support. See page xiii for contact information.

Before contacting support, view the sysinfo.txt file in the Parameters folder on the CS30XX. This indicates the device’s serial number, software version, Bluetooth version, and scan engine version and is useful when troubleshooting the scanner.
**Technical Specifications**

For the latest technical specification information for the CS3000, visit: [http://www.zebra.com/CS3000](http://www.zebra.com/CS3000)

**Decode Zone**

Note: Typical performance at 73.4°F (23°C) on high quality symbols.

*Minimum distance determined by symbol length and scan angle*

</tbody>
</table>
**AIM Code Identifiers**

Each AIM Code Identifier contains the three-character string \[\text{jcm}\] where:

- \(\text{j}\) = Flag Character (ASCII 93)
- \(\text{c}\) = Code Character (see *Table B-3*)
- \(\text{m}\) = Modifier Character (see *Table B-4*)

**Table B-3  Aim Code Characters**

<table>
<thead>
<tr>
<th>Code Character</th>
<th>Code Type</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>Code 39, Code 39 Full ASCII, Code 32</td>
</tr>
<tr>
<td>C</td>
<td>Code 128 (all variants)</td>
</tr>
<tr>
<td>E</td>
<td>UPC/EAN</td>
</tr>
<tr>
<td>e</td>

<td>Code 11</td>
</tr>
<tr>
<td>I</td>
<td>Interleaved 2 of 5</td>
</tr>
<tr>
<td>M</td>
<td>MSI</td>
</tr>
<tr>
<td>S</td>
<td>Discrete 2 of 5, IATA 2 of 5</td>
</tr>
<tr>
<td>X</td>
<td>Code 39 Trioptic, Bookland EAN</td>
</tr>
</tbody>
</table>
The modifier character is the sum of the applicable option values based on Table B-4.

Table B-4  Modifier Characters

<table>
<thead>
<tr>
<th>Code Type</th>
<th>Option Value</th>
<th>Option</th>
</tr>
</thead>
<tbody>
<tr>
<td>Code 39</td>
<td>0</td>
<td>No check character or Full ASCII processing.</td>
</tr>
<tr>
<td></td>
<td>1</td>
<td>Reader has checked one check character.</td>
</tr>
<tr>
<td></td>
<td>3</td>
<td>Reader has checked and stripped check character.</td>
</tr>
<tr>
<td></td>
<td>4</td>
<td>Reader has performed Full ASCII character conversion.</td>
</tr>
<tr>
<td></td>
<td>5</td>
<td>Reader has performed Full ASCII character conversion and checked one check character.</td>
</tr>
<tr>
<td></td>
<td>7</td>
<td>Reader has performed Full ASCII character conversion and checked and stripped check character.</td>
</tr>
</tbody>
</table>

Example: A Full ASCII bar code with check character W, A+I+MI+DW, is transmitted as JA7AIMID where 7 = (3+4).

<table>
<thead>
<tr>
<th>Code Type</th>
<th>Option Value</th>
<th>Option</th>
</tr>
</thead>
<tbody>
<tr>
<td>Trioptic Code 39</td>
<td>0</td>
<td>No option specified at this time. Always transmit 0.</td>
</tr>
</tbody>
</table>

Example: A Trioptic bar code 412356 is transmitted as [X]0412356.

| Code 128 | 0 | Standard data packet, no Function code 1 in first symbol position. |
|          | 1 | Function code 1 in first symbol character position.               |
|          | 2 | Function code 1 in second symbol character position.              |

Example: A Code (EAN) 128 bar code with Function 1 character\textsuperscript{FNC1} in the first position, AIMID is transmitted as JC1AIMID.

| Code 93 | 0 | No options specified at this time. Always transmit 0. |

Example: A Code 93 bar code 012345678905 is transmitted as [G]0012345678905.

| Code 93 | 1 | Check digits are sent. |
|         |   | No check digit is sent. |

Example: An MSI bar code 4123, with a single check digit checked, is transmitted as JM14123.

</table>
GS1-128 (formerly UCC/EAN-128)

GS1-128 is a convention for printing data fields with standard Code 128 bar code symbols. GS1-128 symbols are distinguished by a leading FNC 1 character as the first or second character in the symbol. Other FNC 1 characters are used to delineate fields.

When GS1-128 symbols are read, they are transmitted after special formatting strips off the leading FNC 1 character, and replaces other FNC 1 characters with the ASCII 29 (GS) control character.

When AIM symbology identifiers are transmitted, the modifier character indicates the position of the leading FNC 1 character according to AIM guidelines. For example, \texttt{jc1} indicates a GS1-128 symbol with a leading FNC1 character.

Standard Code 128 bar codes which do not have a leading FNC 1 may still be used, but are not encoded according to the GS1-128 convention. Standard Code 128 and GS1-128 may be mixed in an application. The CS3070 autodiscriminates between these symbols, and can enable or disable one or both code types. Table B-5 indicates the behavior of the CS3070 in each of the four possible parameter settings.

\textbf{Table B-5} Reading Standard Code 128 & GS1-128

</tbody>
</table>
Setting Prefixes and Suffixes

To append a prefix and suffixes to the decode data:

1. Set the Scan Data Transmission Format (parameter 0xEB) to the desired option.

2. Enter the required value(s) for Prefix (0x69), Suffix1 (0x68) or Suffix2 (0x6A) using the hex values for the desired ASCII value from Table B-6.

Quick Start Instructions

Getting Started
- Device Layout: Buttons / LEDs / USB Port - 1-1, 2-1, 2-2
- Charging - 1-3, 1-5, 2-3
- Battery strength LED - 1-3
- LED indication table - 2-3

Batch Operation
- BarcodeFile.txt - file storing batch scanned data - 2-2
- Batch data transfer process - 1-3, 1-5
- Clearing all bar code data - 2-2, 2-3, 3-7

Bluetooth Operation
- Bluetooth profile options - 1-5
- Pairing
  - Serial Port Profile (overview) - 1-6
  - Bar code for SPP mode / PIN entry - 1-19, 1-26, 3-13
  - PC host - 1-10
  - Smart Phone (Windows Mobile 6.5) - 1-17
  - HID (overview) - 1-6
  - Bar code for HID mode / PIN entry - 1-24, 3-13
  - Droid - 1-6
  - PC host - 1-7
  - Smart Phone (Windows Mobile 6.5) - 1-13
- Transferring data - 2-2
- Out of range behavior - 2-3

Developer Recommendations
- Bluetooth connection options - 1-6, 2-3
- Batch programming option / Autorun.inf - 2-2
- Staging multiple scanners
  - Programming a golden scanner via bar codes - 1-25
  - Generating a config.ini file - 1-25
  - Editing the config.ini file - 1-26
  - Staging multiple scanners - 1-25

Frequently Used Parameters
- Reset to Factory Defaults - 3-4
- Default parameter settings tables - 3-2, A-1
- Programming Time/Date - 1-26, 3-5, 3-6
- Enabling Time/Date stamp - 1-26
- Beeper settings - 3-8, 3-9, 3-10
- Data formatting (Prefix/Suffix values) - 3-16, 3-17, 3-18, B-7
- Numeric bar codes
  - HID Pairing - 1-24
  - Time / Date entry - 3-6
  - Numeric bar codes for general use - 4-49
- Sleep mode - 1-26
- Bluetooth Profiles (HID and SPP) - 3-13
