  Cleaning Instructions .......................................................................................................... 8-3
Introduction

This guide provides information about using the MC67 mobile computer and accessories.

NOTE Screens and windows pictured in this guide are samples and can differ from actual screens.

Documentation Set

The documentation set for the MC67 provides information for specific user needs, and includes:

• MC67 Quick Start Guide - describes how to get the MC67 up and running.
• MC67 User Guide - describes how to use the MC67.
• MC67 Integrator Guide - describes how to set up the MC67 and accessories.

Configurations

This guide covers the following configurations:

<table>
<thead>
<tr>
<th>Configuration</th>
<th>Radios</th>
<th>Display</th>
<th>Memory</th>
<th>Data Capture Options</th>
<th>Operating System</th>
<th>Keypads</th>
</tr>
</thead>
<tbody>
<tr>
<td>MC67NA</td>
<td>WLAN: 802.11 a/b/g/n WPAN: Bluetooth v2.1 EDR WWAN:GSM/UMTS GPS: Stand-alone GPS or A-GPS</td>
<td>3.5” VGA Color</td>
<td>1 GB RAM / 8 GB Flash</td>
<td>2D imager and camera</td>
<td>Android-based, Android Open-Source Project 4.1.1 (Jelly Bean) or 4.4.4 (KitKat).</td>
<td>Numeric, QWERTY, QWERTZ, AZERTY or DSD</td>
</tr>
</tbody>
</table>
Software Versions

To determine the current software versions touch 📷 or 📸 > 📱 About phone.

- **Model number** - Displays the model number.
- **Android version** - Displays the operating system version.
- **Kernel version** - Displays the kernel version number.
- **Build number** - Displays the software build number.

To determine the device serial number touch 📷 or 📸 > 📱 About phone > Status.

- **Serial number** - Displays the serial number.

Notational Conventions

The following conventions are used in this document:

- *Italics* are used to highlight the following:
  - Chapters and sections in this and related documents
  - Icons on a screen.
- **Bold** text is used to highlight the following:
  - Dialog box, window, and screen names
  - Drop-down list and list box names
  - Check box and radio button names
  - Button names on a screen.
- Bullets (•) indicate:
  - Action items
  - Lists of alternatives
  - Lists of required steps that are not necessarily sequential
  - Sequential lists (for example, lists that describe step-by-step procedures) appear as numbered lists.

Icon Conventions

The documentation set is designed to give the reader more visual clues. The following graphic icons are used throughout the documentation set. These icons and their associated meanings are described below.

**WARNING!** The word WARNING with the associated safety icon implies information that, if disregarded, could result in death or serious injury, or serious product damage.

**CAUTION** The word CAUTION with the associated safety icon implies information that, if disregarded, may result in minor or moderate injury, or serious product damage.
About This Guide

NOTE

NOTE contains information more important than the surrounding text, such as exceptions or preconditions. They also refer the reader elsewhere for additional information, remind the reader how to complete an action (when it is not part of the current procedure, for instance), or tell the reader where something is located on the screen. There is no warning level associated with a note.

Related Documents

Service Information

If you have a problem with the equipment, contact Customer Support in the region. Contact information is available at: http://www.zebra.com/support.

When contacting support, please have the following information available:

- Serial number of the unit (found on manufacturing label)
- Model number or product name (found on manufacturing label)
- Software type and version number
- IMEI number

Customer Support responds to calls by email or telephone within the time limits set forth in support agreements.

If the problem cannot be solved by Customer Support, the user may need to return the equipment for servicing and will be given specific directions. We are not responsible for any damages incurred during shipment if the approved shipping container is not used. Shipping the units improperly can possibly void the warranty. Remove the SIM card and/or microSD card from the device before shipping for service.

If the device was purchased from a business partner, contact that business partner for support.
Setup

Perform this procedure to start using the MC67 for the first time.

1. Install the subscriber identification module (SIM) card.
2. Install the battery.
3. Charge the MC67.

Installing the SIM Card

Global System for Mobile communications (GSM) phone service requires a SIM card. Obtain the card from a service provider. The card fits into the MC67 and can contain the following information:

- Mobile phone service provider account details
- Information regarding service access and preferences
- Contact information, which can be moved to Contacts on the MC67
- Any additional subscribed services.

**NOTE** For more information about SIM cards, refer to the service provider’s documentation.

1. To install the SIM card, lift rubber access door.
2. Slide the SIM card holder up to unlock.
3. Lift the SIM card holder door.
4. Insert the SIM card, as shown in Inserting the SIM Card ensuring that the card slides into the holding tabs on each side of the door.

5. Close the SIM card holder door and slide down to lock into place.

6. Close the rubber access door.

7. Install the battery.

**Installing the Battery**

1. Insert the battery, bottom first, into the battery compartment in the back of the MC67.

2. Press the battery down into the battery compartment until the battery release latch snaps (two clicks) into place.

   ✓ **NOTE** If the battery has significant charge, the MC67 turns on.

3. Replace the hand strap.
Charging the Battery

Before using the MC67 for the first time, charge the main battery until the amber Charging/Battery Status light emitting diode (LED) remains lit. To charge the MC67, use a cable or a cradle with the appropriate power supply. For information about the accessories available for the MC67, see *Chapter 2, Accessories* for more information.

The MC67 is equipped with a backup battery which automatically charges from the fully-charged main battery. When using the MC67 for the first time, the backup battery requires approximately 40 hours to fully charge. This is also true any time the backup battery is discharged, which occurs when the main battery is removed for several hours. The backup battery retains random access memory (RAM) data in memory for at least 10 minutes (at room temperature) when the MC67’s main battery is removed. When the MC67 reaches a very low battery state, the combination of main battery and backup battery retains RAM data in memory for at least 36 hours.

For cable and cradle setup and charging procedures refer to the *MC67 Integrator Guide*.

- USB Charging Cable
- Charge Only Cable
- Single Slot USB Cradle
- Four Slot Charge Only Cradle
- Four Slot Ethernet Cradle.

Charge batteries in temperatures from 0 °C to 40 °C (32 °F to 104 °F). Note that charging is intelligently controlled by the MC67. To accomplish this, for small periods of time, the MC67 or accessory alternately enables and disables battery charging to keep the battery at acceptable temperatures. The MC67 or accessory indicates when charging is disabled due to abnormal temperatures via its LED.

1. To charge the main battery, connect the charging accessory to the appropriate power source.
2. Insert the MC67 into a cradle or attach to a cable. The MC67 turns on and begins charging. The Charging/Battery Status LED blinks amber while charging, then turns solid amber when fully charged.
LED Charging Indicators

Table 1-1  LED Charging Indicators

<table>
<thead>
<tr>
<th>Charging/Battery Status LED</th>
<th>Indication</th>
</tr>
</thead>
<tbody>
<tr>
<td>Off</td>
<td>MC67 is not charging. MC67 is not inserted correctly in the cradle or connected to a power source. Charger/cradle is not powered.</td>
</tr>
<tr>
<td>Slow Blinking Amber (1 blink every 2 seconds)</td>
<td>MC67 is charging.</td>
</tr>
<tr>
<td>Solid Amber</td>
<td>Charging complete. Note: When the battery is initially inserted in the MC67, the amber LED flashes once if the battery power is low or the battery is not fully inserted.</td>
</tr>
<tr>
<td>Fast Blinking Amber (2 blinks/second)</td>
<td>Charging error, e.g.:</td>
</tr>
<tr>
<td></td>
<td>• Temperature is too low or too high.</td>
</tr>
<tr>
<td></td>
<td>• Charging has gone on too long without completion (typically eight hours).</td>
</tr>
</tbody>
</table>

Powering On the MC67

1. Press the Power button to turn on the MC67.

   The splash screen displays for about a minute as the MC67 initializes its flash file system.

Replacing the Battery

To replace the battery:

1. If the MC67 is in a cradle, remove it before performing a Safe Battery Swap.
2. Unclip the hand strap.
3. Press and hold the Power button until the menu appears.
4. Touch **Battery swap**. The red Data Capture LED turns on.

5. Wait for the red Data Capture LED to turn off.

6. Slide the battery latch to the right. The battery ejects slightly.

![Slide Latch to the Right](image1.jpg)

**Figure 1-5  Slide Latch to the Right**

7. Lift the battery from the MC67.

![Lift the Battery](image2.jpg)

**Figure 1-6  Lift the Battery**

8. Insert the replacement battery, bottom first, into the battery compartment in the back of the MC67.

9. Press the battery down until the battery release latch snaps (two clicks) into place.

10. Replace the hand strap.

11. Press the Power button to wake the MC67.

---

## Replacing the microSD Card

To replace the microSD card:

1. If the MC67 is in a cradle, remove it before performing a Safe Battery Swap.

2. Unclip the hand strap.

3. Press and hold the Power button until the menu appears.

4. Touch **Battery swap**.
5. Wait for the red Data Capture LED to turn off.

6. Remove the battery.

7. Lift the rubber access door.

8. Slide SIM card holder door up to unlock.

9. Lift SIM Card holder door.

10. Lift the microSD card holder door.

11. Remove microSD card from holder.

12. Close microSD card holder door.

13. Close SIM card holder door.

14. Slide SIM card holder door down to lock into place.

15. Close the rubber access door.

16. Insert the battery, bottom first, into the battery compartment in the back of the MC67.

17. Press the battery down until the battery release latch snaps (two clicks) into place.

18. Replace the hand strap.

19. Press the Power button to wake the MC67.

20. If a SIM card is installed, perform a soft reset.

   See *Performing a Soft Reset on page 1-7*.

---

**Replacing the SIM Card**

To replace the SIM card:

1. If the MC67 is in a cradle, remove it before performing a Safe Battery Swap.

2. Unclip the hand strap.

3. Press and hold the Power button until the menu appears.

4. Touch **Battery swap**.

5. Wait for the red Data Capture LED to turn off.
6. Remove the battery.
7. Lift the rubber access door.
8. Slide SIM card holder door up to unlock.
9. Lift the SIM Card holder door.
10. Remove SIM card from holder.
11. Close SIM card holder door.
12. Slide SIM card holder door down to lock into place.
13. Close the rubber access door.
14. Insert the battery, bottom first, into the battery compartment in the back of the MC67.
15. Press the battery down until the battery release latch snaps (two clicks) into place.
16. Replace the hand strap.
17. Perform a soft reset.
   See Performing a Soft Reset on page 1-7.

---

**Resetting the MC67**

There are four reset functions:

- Soft reset
- Hard reset
- Enterprise reset
- Factory reset.

**Performing a Soft Reset**

Perform a soft reset if applications stop responding.

1. Press and hold the Power button until the menu appears.
2. Touch **Reset**.
3. The device reboots.

**Performing a Hard Reset**

![CAUTION] Performing a hard reset with a SIM card installed in the MC67 may cause damage or data corruption to the SIM card.

Perform a hard reset if the MC67 stops responding.

1. On a numeric or DSD keypad, simultaneously press the Power button and the 1 and 9 keys.
2. On a alpha-numeric keypad, simultaneously press the Power button and the W and C keys.
3. The MC67 shuts down and then reboots.

**Performing an Enterprise Reset**

An Enterprise Reset erases all data in the `/cache` and `/data` partitions and clears all device settings, except those in the `/enterprise` partition.

Before performing an Enterprise Reset, copy all applications and the key remap configuration file that you want to persist after the reset into the `/enterprise/usr/persist` folder.

1. Download the Enterprise Reset zip file from the Zebra Support Central web site.
2. Copy the Enterprise Reset zip file to the root directory of the microSD card. See *Chapter 3, USB Communication*.
3. Press and hold the Power button until the menu appears.
4. Touch *Reset*.
5. Touch *OK*. The MC67 resets.
6. Press and hold the Right Scan/Action button.
7. When the Recovery Mode screen appears, release the button.
9. Press the Up and Down Volume buttons to navigate to the *apply update from sdcard* option.
10. Press the Right Scan/Action button.
11. Press the Up and Down Volume buttons to navigate to the Enterprise Reset zip file.
12. Press the Right Scan/Action button. The Enterprise Reset occurs and then the device resets.

**Performing a Factory Reset**

A Factory Reset erases all data in the `/cache`, `/data` and `/enterprise` partitions in internal storage and clears all device settings. A Factory Reset returns the device to the last installed operating system image. To revert to a previous operating system version, re-install that operating system image. See *Updating the System on page 7-6* for more information.

1. Download the Factory Reset file from the Zebra Support Central web site.
2. Copy the Factory Reset zip file to the root directory of the microSD card. See *Chapter 3, USB Communication*.
3. Press and hold the Power button until the menu appears.
4. Touch *Reset*.
5. Touch *OK*. The device resets.
6. Press and hold the Right Scan/Action button.
7. When the Recovery Mode screen appears release the button.
9. Press the Up and Down volume buttons to navigate to the *apply update from sdcard* option.
10. Press the Right Scan/Action button.
11. Press the Up and Down volume buttons to navigate to the Factory Reset zip file.

12. Press the Right Scan/Action button. The Factory Reset occurs and then the device resets.
This chapter provides information for using the accessories for the device.

**Accessories**

This table lists the accessories available for the MC67.

<table>
<thead>
<tr>
<th>Accessory</th>
<th>Part Number</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Single Slot USB Cradle</td>
<td>CRD-MC5X-RCHG1–01</td>
<td>Charges the MC67 main battery and a spare battery. Synchronizes the MC67 with a host computer through a USB connection.</td>
</tr>
<tr>
<td>Four Slot Charge Only Cradle</td>
<td>CRD5501-4000CR</td>
<td>Charges up to four MC67 devices.</td>
</tr>
<tr>
<td>Four Slot Ethernet Cradle</td>
<td>CRD5501-4000ER</td>
<td>Charges up to four MC67 devices and connects the MC67 with an Ethernet network. CRD5501-4000ER provides up to a maximum of 1 Gbps.</td>
</tr>
<tr>
<td>Single Slot Ethernet/Modem/USB Cradle</td>
<td>CRD5501–1000XR</td>
<td>Charges the MC67 main battery and a spare battery. Synchronizes the MC67 with a host computer through an Ethernet or USB connection.</td>
</tr>
<tr>
<td>Vehicle Cradle</td>
<td>VCD5500-1001R</td>
<td>Installs in a vehicle and charges the MC67 main battery.</td>
</tr>
<tr>
<td>Vehicle Holder</td>
<td>VCH5500-1000R</td>
<td>Provides an alternative mounting solution for the MC67 in a vehicle. Requires the Auto Charge cable for charging the MC67 battery.</td>
</tr>
<tr>

<tr>
<td>Spare Tether</td>
<td>KT-122621-03R</td>
<td>Replacement tether (3-pack).</td>
</tr>
<tr>
<td></td>
<td>KT-122621-50R</td>
<td>(50-pack).</td>
</tr>
<tr>
<td>Hand strap</td>
<td>SG-MC5523341-03R</td>
<td>Replacement hand strap with pin.</td>
</tr>
<tr>
<td>Wall Mounting Kit</td>
<td>KT-136648-01R</td>
<td>Use for wall mounting the four slot cradles.</td>
</tr>
<tr>
<td>Screen Protector</td>
<td>KT-137521-03R</td>
<td>Package of 3 screen protectors.</td>
</tr>
</tbody>
</table>
Single Slot USB Cradle

This section describes how to set up and use a Single Slot USB cradle with the MC67. For USB communication setup procedures see USB Communication.

The Single Slot USB cradle:

- Provides 5.4 VDC power for operating the MC67.
- Synchronizes information between the MC67 and a host computer. See Chapter 3, USB Communication for information on setting up a partnership between the MC67 and a host computer.
- Charges the MC67’s battery.
- Charges a spare battery.

Setup

![Figure 2-1 Single Slot USB Cradle Power and USB Connections](image)

Charging the MC67 Battery

Connect the cradle to power. Insert the MC67 into the MC67 slot to begin charging.
Charging the Spare Battery

The Single Slot USB cradle charges the MC67’s main battery and a spare battery simultaneously.

The MC67’s Charging/Battery Status LED indicates the status of the battery charging in the MC67. See Table 1-1 on page 1-4 for charging status indications.

The spare battery charging LED on the cradle indicates the status of the spare battery charging in the cradle. See below for charging status indications.

The 3600 mAh battery fully charges in approximately six hours.
Charging Temperature

Charge batteries in temperatures from 0 °C to 40 °C (32 °F to 104 °F). Charging is intelligently controlled by the MC67.

To accomplish this, for small periods of time, the MC67 or cradle alternately enables and disables battery charging to keep the battery at acceptable temperatures. The MC67 or cradle indicates when charging is disabled due to abnormal temperatures via its LED.

<table>
<thead>

<td>Not charging.</td>
</tr>
</tbody>
</table>

Table 2-2 Spare Battery LED Charging Indicators
Four Slot Ethernet Cradle

This section describes how to set up and use a Four Slot Ethernet cradle with the MC67.

The Four Slot Ethernet cradle:

• Provides 5.4 VDC power for operating the MC67.
• Connects the MC67 (up to four) to an Ethernet network.
• Simultaneously charges up to four MC67s.

CRD5501-4001ER Setup

Connect the Four Slot Ethernet cradle to a power source and to an Ethernet switch, router, or hub, or a port on the host device.
Daisy Chaining Ethernet Cradles

Daisy chain up to four Four Slot Ethernet cradles to connect several cradles to an Ethernet network. Use either a straight or crossover cable. Daisy-chaining should not be attempted when the main Ethernet connection to the first cradle is 10 Mbps as throughput issues will almost certainly result.

To daisy chain more than Four Slot Ethernet cradles:

1. Connect power to each Four Slot Ethernet cradle.
2. Connect an Ethernet cable to the Primary Port of the first cradle and to the Ethernet switch.
3. On the first Four Slot Ethernet cradle, lift or remove the label flap and connect a second Ethernet cable to the Secondary Port.
4. Connect the other end of the Ethernet cable to the Primary Port of the second Four Slot Ethernet cradle.
5. Connect additional cradles as described in step 3 and step 4.

![Figure 2-6 Daisy chaining Four Slot Ethernet Cradles](image)

LED Indicators (CRD5501-4001ER)

There are two green LEDs on the front of the cradle and two green LED on the Primary port on the back of the cradle. These green LEDs light and blink to indicate the data transfer rate. When the LEDs are not lit the transfer rate is 10 Mbps.

<table>
<thead>
<tr>
<th>Data Rate</th>

<td>Off</td>
</tr>
</tbody>
</table>

Ethernet Settings

The following settings can be configured when using Ethernet communication:

- Proxy Settings
- Static IP
Configuring Ethernet Proxy Settings

The MC67 includes Ethernet cradle drivers. After inserting the MC67, configure the Ethernet connection:

1. Touch \( \text{ } \rightarrow \text{ or } \)\.

2. Touch Ethernet.

3. Slide the switch to the ON position.

4. Place the MC67 into the Ethernet cradle slot.

5. Touch and hold Eth0 until the menu appears.

6. Touch Modify Proxy.

7. Touch the Proxy settings drop-down list and select Manual.

8. In the Proxy hostname field, enter the proxy server address.

9. In the Proxy port field, enter the proxy server port number.

10. In the Bypass proxy for text box, enter addresses for web sites that do not require to go through the proxy server. Use the separator "|" between addresses.

11. Touch Modify.

12. Touch \( \text{ } \rightarrow \).

Configuring Ethernet Static IP Address

The MC67 includes Ethernet cradle drivers. After inserting the MC67, configure the Ethernet connection:

1. Touch \( \text{ } \rightarrow \text{ or } \)\.

2. Touch Ethernet.
3. Slide the switch to the **ON** position.

4. Place the MC67 into the Ethernet cradle slot.

5. Touch and hold **Eth0** until the menu appears.

6. Touch **Disconnect**.

![Eth0 settings](image)

**Figure 2-8 Ethernet Proxy Settings**

7. Touch and hold **Eth0** until the menu appears.

8. Touch the **IP setting** drop-down list and select **Static**.

9. In the **IP address** field, enter the proxy server address.

10. If required, in the **Gateway** text box, enter a gateway address for the device.

11. If required, in the **Network prefix length** text box, enter a the prefix length.

12. If required, in the **DNS 1** text box, enter a Domain Name System (DNS) address.

13. If required, in the **DNS 2** text box, enter a DNS address.

14. Touch **Connect**.

15. Touch 🔋.

**Charging the MC67**

Insert the MC67 into a slot to begin charging. The MC67’s Charging/Battery Status LED shows the status of the battery charging in the MC67.
The 3600 mAh battery fully charges in approximately six hours.

**Charging Temperature**

Charge batteries in temperatures from 0 °C to 40 °C (32 °F to 104 °F). Charging is intelligently controlled by the MC67.

To accomplish this, for small periods of time, the MC67 alternately enables and disables battery charging to keep the battery at acceptable temperatures. The MC67 indicates when charging is disabled due to abnormal temperatures via its LED.
**Four Slot Charge Only Cradle**

This section describes how to set up and use a Four Slot Charge Only cradle with the MC67.

The Four Slot Charge Only cradle:

- Provides 5.4 VDC power for operating the MC67.
- Simultaneously charges up to four MC67s.

The user cannot ActiveSync using the Four Slot Charge Only cradle. To ActiveSync with a host computer, use the Single Slot USB cradle.

**Setup**

Connect the Four Slot Charge Only cradle to a power source.

![Four Slot Charge Only Cradle Setup](Image)

**Charging the MC67**

Insert the MC67 into a slot to begin charging. The MC67’s Charging/Battery Status LED shows the status of the battery charging in the MC67.

The 3600 mAh battery fully charges in approximately six hours.

**Charging Temperature**

Charge batteries in temperatures from 0 °C to 40 °C (32 °F to 104 °F). Charging is intelligently controlled by the MC67.

To accomplish this, for small periods of time, the MC67 alternately enables and disables battery charging to keep the battery at acceptable temperatures. The MC67 indicates when charging is disabled due to abnormal temperatures via its LED.
Wall Mount Bracket

Use the optional Wall Mount Bracket to mount a four slot cradle to a wall. To attach the Wall Mount Bracket:

1. Use the Wall Mount Bracket as a template and mark the locations of the four mounting screws.

   ✓ **NOTE** Use fasteners appropriate for the type of wall and the Wall Mount Bracket mounting slots. The Wall Mount Bracket mounting slots are designed for a fastener with a #8 pan head. Fasteners must be able to hold a minimum of 4.9 Kg (10.8 lbs).

2. Mount the fasteners to the wall. The screw heads should protrude about a half of an inch from the wall.
3. Slip the Wall Mount Bracket over the screw heads and slide the bracket down over the screw heads.
4. Tighten the screws to secure the bracket to the wall.

![Figure 2-10 Wall Mount Bracket](image)

Mounting a Four Slot Cradle

To mount a four slot cradle:

1. Screw the supplied screws into the bottom of the four slot cradle. The screw heads should protrude about a quarter of an inch from the cradle.

![Figure 2-11 Cradle Mounting Screws](image)
2. Align the Wall Mount Bracket mounting tabs with the mounting slots in the back of the four slot cradle. Slip the two mounting tabs into mounting slots.

3. Swing the four slot cradle down onto the mounting bracket and align the mounting screws so that they fit into the screw slots.

4. Tighten the mounting screws to secure the four slot cradle to the bracket.

5. Connect power. The power supply should be located in the power supply well.
VCD5500 Vehicle Cradle

This section describes how to set up and use a VCD5500 vehicle cradle with the MC67.

Once installed in a vehicle, the cradle:

• holds the MC67 securely in place
• provides power for operating the MC67
• re-charges the battery in the MC67

Requirements

For mounting:

• four #8-32 self-locking nuts
• four #8 washers
• a drill with a #6 drill bit (.204")

For power connection:

• power input cable (optional), p/n 25-61987-01R or 25-128974-01R
• UL Listed in-line fuse rated 250V, 5A (included), must be used if not connecting to vehicle’s fuse panel
• in-line fuse holder (included), must be used if not connecting to vehicle’s fuse panel

CAUTION ROAD SAFETY - Do not use the MC67 while driving. Park the vehicle first. Always ensure the MC67 is fully inserted into the cradle. Do not place it on the seat or where it can break loose in a collision or sudden stop. Lack of proper insertion may result in property damage or personal injury. Zebra is not responsible for any loss resulting from the use of the products while driving. Remember: Safety comes first.
Mounting the Cradle

**CAUTION** Only mount the Vehicle Cradle in a vertical position with the release level at the top or in a horizontal position with the MC67 display facing up. Never mount the vehicle cradle on the side or upside down or on a wall that can be subject to impact or collision of greater than 40Gs, in accordance with SAE J1455 Section 4.10.3.5.

1. Select a mounting location for the cradle. It should be flat, and must provide adequate support for the cradle.

**NOTE** If using the GPS functionality of the MC67, ensure that the vehicle cradle is positioned so that the MC67 has a clear unobstructed view of the sky.

2. Prepare the mounting surface to accept four #8-32 studs, using the mounting template below. Drill four holes with a #6 drill bit.

![Vehicle Cradle Mounting Template](image)

**CAUTION** Do not install a VCD5500 Vehicle Cradle on or near an air bag cover plate or within an aerobic zone. Also, do not install it in a location that affects vehicle safety or driveability.

3. Position the cradle on the mounting surface.
4. Fasten it using four #8 washers and four #8-32 self-locking nuts.

Power Connection

Please read all of the following instructions before beginning.

**WARNING!** A properly trained technician must perform the power connection. Improper connection can damage your vehicle, cradle or MC67. Refer to the vehicle’s Owner’s Manual for instructions for removing power.

To connect the cradle to power:

**CAUTION** When setting up connection for this cradle, only use the power input cable, part number 25-61987-01R or 25-128974-01R.

1. Locate the vehicle power source.
2. Route the power input cable from the cradle’s power port to the connection point for the vehicle’s power source.

**NOTE** The ideal location for connecting the vehicle cradle power input cable would be an accessory output in your vehicle’s fuse panel. The vehicle cradle should be added to a circuit with a maximum load capacity for the cradle and the original circuit. Refer to the vehicle’s Owner’s Manual for identification of the circuit. If a fused output is not available, the vehicle cradle must be installed with the provided in-line fuse holder and UL Listed 5A fuse. The fuse protects the vehicle from an electrical short on the power line to the cradle.

To use the cradle to charge the MC67 and spare battery, when the vehicle’s ignition is off, connect the cradle to unswitched power.

CAUTION The means of routing and securing the power input cable from the cradle through to the vehicle power source is extremely important. Hazards associated with improper wiring can be severe. To avoid unintentional contact between the wire and any sharp edges, provide the cable with proper bushings and clamping where it passes through openings. If the wire is subjected to sharp surfaces and excess engine vibration, the wiring harness insulation can wear away, causing a short between the bare wire and chassis. This can start a fire.

To avoid any mishaps, all wiring should be routed away from moving parts, high temperature areas and any contaminants.

3. When using the supplied in-line fuse holder (which must be used if not connecting to vehicle’s fuse panel):
   a. Ensure the fuse holder contains a 5A UL Listed slow-blow fuse.
   b. Splice the fuse holder to the end of the red V+ wire, as shown above. Make the distance from the fuse to the power connection point as short as possible.

![Vehicle Cradle Power Connection](image)

**Figure 2-16 Vehicle Cradle Power Connection**

4. Prepare the cable termination.
   a. Red wire: connect to a +12/24 V vehicle power source.
   b. Black wire and Shield wire: connect to vehicle ground wire or chassis ground.

**NOTE** How the cable terminates depends on the vehicle. If the vehicle has a power output connector, then you must attach a mating connector to the end of the power cable. You may be able to connect to a fuse panel with a simple blade terminal or commercially available connector. Consult the vehicle Owner’s Manual for information on how to access the power supply in the vehicle.
5. Connect the power input cable into the power port on the cradle.

To see if the cradle has power, insert the MC67. The Charging LED on the MC67 blinks slowly to indicate charging and turns solid amber when the battery is completely charged. See LED Charging Indicators on page 1-4 for other indications.

Charging the MC67 Battery

1. Insert the MC67 into the vehicle cradle to begin charging.

![Figure 2-17 MC67 Battery Charging](image)

2. Press the MC67 down to ensure it is seated properly.
   A click indicates that the MC67 button release locking mechanism is enabled and the MC67 is locked in place.

   **CAUTION** Ensure the MC67 is fully inserted in the cradle. Lack of proper insertion may result in property damage or personal injury. We are not responsible for any loss resulting from the use of the products while driving.

Removing the MC67

1. Press the release levers on the cradle.
2. Pull the MC67 up and out of the cradle.
Insert the MC67 into a slot to begin charging. The MC67’s Charging/Battery Status LED shows the status of the battery charging in the MC67.

The 3600 mAh battery fully charges in approximately six hours.

**Charging Temperature**

Charge batteries in temperatures from 0 °C to 40 °C (32 °F to 104 °F). Charging is intelligently controlled by the MC67.

To accomplish this, for small periods of time, the MC67 alternately enables and disables battery charging to keep the battery at acceptable temperatures. The MC67 indicates when charging is disabled due to abnormal temperatures via its LED.
Four Slot Battery Charger

This section describes how to use the Four Slot Battery Charger to charge up to four MC67 spare batteries.

Spare Battery Charging

1. Connect the charger to a power source.
2. Insert the spare battery into a spare battery charging well and gently press down on the battery to ensure proper contact.

Battery Charging Indicators

An amber LED is provided for each battery charging well. See Table 2-2 on page 2-6 for charging status indications. The 3600 mAh battery charges in approximately six hours.

Charging Temperature

Charge batteries in temperatures from 0 °C to 40 °C (32 °F to 104 °F). Charging is intelligently controlled by the charger in order to ensure safe operation and optimize long-term battery life.

To accomplish this, for small periods of time, the charger alternately enables and disables battery charging to keep the battery at acceptable temperatures. The charger indicates when charging is disabled due to abnormal temperatures via its LED. See Table 2-2 on page 2-6.
Cables

This section describes how to set up and use the cables. The cables are available with a variety of connection capabilities.

The following communication/charge cables are available:

- USB Charging cable
- Charge Only cable
- Auto Charge cable
- DEX cable.

### USB Charging Cable

The USB Charging cable provides the MC67 with operating and charging power when used with the Zebra approved power supply and AC line cord and synchronize information between the MC67 and a host computer.

Charge Only Cable

The Charge Only cable provide the MC67 with operating and charging power when used with the Zebra approved power supply.

![Charge Only Cable Setup](image)

**Figure 2-21  Charge Only Cable Setup**

Auto Charge Cable

The Auto Charge cable plugs into a vehicle cigarette lighter and provide the MC67 with operating and charging power.

![Auto Charge Cable](image)

**Figure 2-22  Auto Charge Cable**

Connecting Cables to the MC67

1. If required, connect the cable power input connector to the Zebra approved power source.
2. Slide the bottom of the MC67 into the connector cup end of the cable until the MC67 is firmly seated in the cup.
3. Slide the two locking tabs up until they both lock into position.
Figure 2-23  *Cable Cup Locking Tabs*

4. To remove, slide the two locking tab down and remove the cable from the MC67.

**Charging the MC67**

Insert the MC67 into a slot to begin charging. The MC67’s Charging/Battery Status LED shows the status of the battery charging in the MC67.

The 3600 mAh battery fully charges in approximately six hours.

**Charging Temperature**

Charge batteries in temperatures from 0 °C to 40 °C (32 °F to 104 °F). Charging is intelligently controlled by the MC67.
To accomplish this, for small periods of time, the MC67 alternately enables and disables battery charging to keep the battery at acceptable temperatures. The MC67 indicates when charging is disabled due to abnormal temperatures via its LED.

### Vehicle Holder

**WARNING!** Some countries prohibit the mounting of any electronic device in any location on the vehicle dashboard and windshield. Be sure to check your local laws acceptable mounting areas before installing the auto mounting kit.

### Installation Reminders

- Do not mount the vehicle holder where it will obscure the driver’s view of the road.
- Do not mount the vehicle holder near the driver seat air bag deployment area.
- Do not place the MC67 on top of the dashboard or anywhere without securing it in the vehicle holder.
- Do not mount the vehicle holder near the passenger seat air bag deployment area.
- Install the vehicle holder on the surface of your vehicle that is reasonably flat and free of dirt and oil.

### Device Mounting Precautions

- Some countries prohibit the mounting of any electronic device in any location on the vehicle dashboard. Be sure to check your local laws acceptable mounting areas before installing the vehicle holder.
• The heating and cooling cycle of a vehicle’s interior will in some cases loosen the adhesion of the suction cup. Check the vacuum seal of the vehicle mount kit for adequate adhesion each time you use the unit, and reinstall if necessary.

• If the vehicle holder has problems staying on, clean the plastic suction cup with alcohol, then reinstall.

**Installation**

Install the vehicle mount on the surface of your vehicle that is reasonably flat and free of dirt and oil. Clean the mounting surface with a glass cleaner and a clean cotton cloth. Install the vehicle mount on the windshield or other flat car surface using the supplied mounting disc.

**Assembly**

1. Insert the vehicle holder’s cradle plate to the holes on the back of the cradle.
2. Push the cradle down until both parts are engaged.

**Windshield Installation**

1. Fix the suction cup mount to the selected area with the suction lever facing up.

2. Flip the lever down to create a vacuum between the suction cup and the mounting surface.
3. Make sure that the suction bond is strong enough before proceeding to the next step.
4. Slide the MC67 into the cradle.
5. Connect the auto charger cable to the MC67 and slide the two locking tabs up to secure the cable cup to the MC67.

6. Connect the other end to the cigarette lighter socket.

**NOTE** Prior to removing the MC67 from the vehicle holder, disconnect the auto-charge cable from the MC67.

The LED indicator on the right side of the touch screen lights up orange during charging.

**Flat Surface Installation**

1. Remove the plastic sheet on the bottom of the mounting disc.

2. Place the disc, sticky side down, on a clean flat surface.

3. Fix the suction cup mount to the disc with the suction lever facing up.

4. Flip the lever down to create a vacuum between the suction cup and the disc.

5. Make sure that the suction bond is strong enough before proceeding to the next step.
6. Slide the MC67 into the cradle.

7. Connect the auto charger cable to the MC67 and slide the two locking tabs up to secure the cable cup to the MC67.

8. Connect the other end to the cigarette lighter socket.
   The LED indicator on the right side of the touch screen lights up orange during charging.
Hand Strap Replacement

Removal

To remove a hand strap from the MC67:

1. If the MC67 is in suspend mode, press the red Power button to wake the MC67.

2. Press the red Power button.
   The Power Action Key window appears.

3. Tap Safe Battery Swap.
   The Data Capture LED lights red.

4. When the LED turns off, remove the hand strap.

5. Remove the battery.

6. Using a small flat screwdriver, push the head of the screwdriver between the hand strap pin and the bottom of the housing as shown below.

7. Pry the hand strap and pin up and out of the hand strap mount area.
Figure 2-30  Hand Strap and Pin Removal

8. Repeat for the other side of the hand strap.
9. Remove pin from the hand strap.

Figure 2-31  Pin Removal

10. Pull hand strap through hand strap slot.

Installation

To install a new hand strap:
1. Feed bottom end of hand strap into hand strap slot on the bottom of the MC67.
2. Slide pin into bottom of hand strap.

3. Center the pin in the hand strap loop.

**NOTE** Hand strap and pin should fit securely into the hand strap mounting area. When pulling on hand strap use enough force to engage pin into place.

4. Pull hand strap so that the pin and bottom of hand strap slide into position in the mounting area.

5. Slide tether loop over hand strap.

6. Insert the hand strap clip into the slot on the device. Ensure that it is securely in place.
CHAPTER 3 USB COMMUNICATION

This chapter provides information for transferring files between the device and a host computer.

Connecting to a Host Computer via USB

Connect the MC67 to a host computer using the USB Charging cable or Single Slot USB cradle to transfer files between the MC67 and the host computer.

⚠️ **CAUTION** When connecting the MC67 to a host computer, follow the host computer’s instructions for connecting and disconnecting USB devices, to avoid damaging or corrupting files.

✓ **NOTE** A microSD card must be installed in the MC67 to transfer files between the MC67 and host computer.

Connecting to the MC67 as a Media Device

1. Connect the USB Charging cable to the MC67 and then to the host computer or place the MC67 into a Single Slot USB cradle that is connected to a host computer.

   Connected as a media device or Connected as an installer appears on the Status bar.

2. If Connected as an installer appears, pull down the Notification shade and touch Connected as an installer and then touch Media device (MTP).

3. On the host computer, open a file explorer application.

4. Locate the MC67NA as a portable device.

5. Open the SD card folder.

6. Copy or delete files as required.

Connecting to the MC67 as an Installer

1. Connect the USB Charging cable to the MC67 and then to the host computer or place the MC67 into a Single Slot USB cradle that is connected to a host computer.
Connected as a media device or Connected as an installer appears on the Status bar.

2. If Connected as media device appears, pull down the Notification shade and touch Connected as media device and then touch Media device (MTP) to de-select.

3. Touch Turn on USB Storage.

4. On the host computer, open a file explorer application.
   The MC67 storage appears as Removable Disk.

5. Locate the MC67 as a devices within Removable Storage.

6. Open the Removable Disk.

7. Copy or delete files as required.

8. On the MC67, touch Turn off USB storage

---

**Disconnect from the Host Computer**

*CAUTION* Carefully follow the host computer’s instructions to unmount the microSD card and disconnect USB devices correctly to avoid losing information.

1. On the host computer, unmount the device.

2. Remove the USB Charging cable from the MC67 or remove the MC67 from the Single Slot USB cradle.
DataWedge is an application that reads data, processes the data and sends the data to an application.

### Basic Scanning

Scanning can be performed using either the imager or the rear-facing camera.

#### Using the Imager

To capture bar code data:

1. Ensure that an application is open on the MC67 and a text field is in focus (text cursor in text field).
2. Aim the exit window at a bar code.
3. Press and hold the a Scan button. The red laser aiming pattern turns on to assist in aiming. Ensure that the bar code is within the area formed by the aiming pattern. The Data Capture LED lights red to indicate that data capture is in process.

![Image of Data Capture](image)

**Figure 4-1  Data Capture**

4. The Data Capture LED lights green, a beep sounds and the MC67 vibrates, by default, to indicate the bar code was decoded successfully. The captured data appears in the text field.

#### Using the Camera

To capture bar code data:

1. Ensure that an application is open on the MC67 and a text field is in focus (text cursor in text field).
2. Aim the rear-facing camera at a bar code.

3. Press and hold a Scan button. By default, a preview window appears on the screen. The Data Capture LEDs light red to indicate that data capture is in process.

4. Move the MC67 until the bar code is centered under the red target.

5. The Left and Right LEDs light green, a beep sounds and the MC67 vibrates, by default, to indicate the bar code was decoded successfully. The captured data appears in the text field.

Profiles

DataWedge is based on profiles and plug-ins. A profile contains information on how DataWedge should behave with different applications.

Profile information consists of:

- Associated application
- Input plug-in configurations
- Output plug-in configurations
- Process plug-in configurations.

Using profiles, each application can have a specific DataWedge configuration. For example, each user application can have a profile which outputs scanned data in the required format when that application comes to the foreground. DataWedge can be configured to process the same set of captured data differently based on the requirements of each application.

DataWedge includes the following visible and hidden pre-configured profiles which support specific built-in applications:

- Visible profiles:
  - **Profile0** - created automatically the first time DataWedge runs. Generic profile used when there are no user created profiles associated with an application.
  - **Launcher** - disables scanning when the Launcher is in foreground.
  - **DWDemo** - provides support for the DWDemo application.
• Hidden profiles (not shown to the device):
  • RD Client - provides support for MSP.
  • MSP Agent - provides support for MSP.
  • MspUserAttribute - provides support for MSP.
  • Camera - disables scanning when the default camera application is in foreground.
  • RhoElements - disables scanning when RhoElements is in foreground.

Profile0

Profile0 can be edited but cannot be associated with an application. That is, DataWedge allows manipulation of plug-in settings for Profile0 but it does not allow assignment of a foreground application. This configuration allows DataWedge to send output data to any foreground application other than applications associated with user-defined profiles when Profile0 is enabled.

Profile0 can be disabled to allow DataWedge to only send output data to those applications which are associated in user-defined profiles. For example, create a profile associating a specific application, disable Profile0 and then scan. DataWedge only sends data to the application specified in the user-created profile. This adds additional security to DataWedge enabling the sending of data only to specified applications.

Plug-ins

A plug-in is a software module utilized in DataWedge to extend its functionality to encompass technologies such as bar code scanning. The plug-ins can be categorized into three types based on their operations:

• Input Plug-ins
• Output Plug-ins
• Process Plug-ins.

Input Plug-ins

An Input Plug-in supports an input device, such as a bar code scanner contained in, or attached to the device. DataWedge contains base plug-ins for these input devices.

• Bar Code Scanner Input Plug-in – The Bar Code Scanner Input Plug-in is responsible for reading data from the integrated bar code scanner and supports different types of bar code readers including laser, imager and internal camera. Raw data read from the bar code scanner can be processed or formatted using Process Plug-ins as required. DataWedge has built-in feedback functionality for the bar code scanner to issue user alerts. The feedback settings can be configured according to user requirement.

• MSR Input Plug-in – The Magnetic Stripe Reader (MSR) Input Plug-in is responsible for reading data from an MSR. Raw data read from the MSR can be processed or formatted using Process Plug-ins as required. DataWedge has built-in feedback functionality for the MSR to issue user alerts. The feedback settings can be configured according to user requirement.

Process Plug-ins

Process Plug-ins are used in DataWedge to manipulate the received data according to the requirement, before sending to the foreground application via the Output Plug-in.
• **Basic Data Formatting Process Plug-in** – The Basic Data Formatting Plug-in allows DataWedge to add a prefix and/or a suffix to the captured data before passing it to an Output Plug-in.

• **Advanced Data Formatting Process Plug-in** – The Advanced Data Formatting Plug-in allows DataWedge to apply rules (actions to be performed based on defined criteria) to the data received via an input plug-in before passing it to an Output Plug-in.

### Output Plug-ins

Output Plug-ins are responsible for sending the data from Input Plug-ins to a foreground application on the device.

• **Keystroke Output Plug-in** – The Keystroke Output Plug-in collects and sends data received from the Input Plug-in to the foreground applications by emulating keystrokes.

• **Intent Output Plug-in** – The Intent Output Plug-in collects and sends data received from the Input Plug-ins to foreground applications using the Android Intent mechanism.

• **IP Output Plug-in** – The IP Output Plug-in collects and sends data received from the Input Plug-ins to a host computer via a network connection. Captured data can be sent over an IP network to a specified IP address and port using either TCP or UDP transport protocols.

### Profiles Screen

To launch DataWedge, touch > DataWedge. By default, three profiles appear:

• Profile0
• Launcher
• DWDemo.

Profile0 is the default profile and is used when no other profile can be applied.

![DataWedge Profiles Screen](image)

Profile names are color coded. Enabled profiles are white and disabled profiles are gray.

To configure a profile touch the profile name.
Profile Context Menu

Touch and hold a profile to open a context menu that allows additional actions to be performed on the selected profile.

![Profile Context Menu](image)

Figure 4-4 Profile Context Menu

The profile context menu allows the profile to be edited (same as just tapping on a profile), renamed or deleted.

Options Menu

The menu provides options to create a new profiles, access to general DataWedge settings and DataWedge version information.

Touch 📚 to open the options menu.

![DataWedge Options Menu](image)

Figure 4-5 DataWedge Options Menu

Disabling DataWedge

1. Touch 📚 > 📚.
2. Touch 📚.
3. Touch Settings.
4. Touch DataWedge enabled.

The blue check disappears from the checkbox indicating that DataWedge is disabled.
Creating a New Profile

5. Touch >.
6. Touch .
7. Touch New profile.
8. In the New profile dialog box, enter a name for the new profile. It is recommended that profile names be unique and made up of only alpha-numeric characters (A-Z, a-z, 0-9).

9. Touch OK.
   The new profile name appears in the DataWedge profile screen.

Profile Configuration

To configure the Profile0 or a user-created profile, touch the profile name.

The configuration screen lists the following sections:

- Profile enabled
- Applications
- Barcode Input
- MSR Input
DataWedge Configuration

- Keystroke output
- Intent Output
- IP Output.

Data Capture Plus

**NOTE** Data Capture Plus is only available on MC67 with KitKat operating system.

The Data Capture Plus (DCP) is a DataWedge feature that enables the user to initiate data capture by touching an area on the screen. A button or screen overlay acts like a scan button.

![DCP Button](image)

**Figure 4-8  Data Capture Plus Button**

The DataWedge profile configuration screen allows the user to configure how the DCP appears on the screen once the particular profile is enabled. The DCP is hidden by default. Enabling DCP option displays additional configuration parameters.

![DCP Settings](image)

**Figure 4-9  Data Capture Plus Settings**

- **Enable** - Select to enable Data Capture Plus (default - disabled).
- **Dock button on** - Select position of the button.
  - **Left or right** - Allows user to place the button on either the right or left edge of the screen.
  - **Left only** - Places the button on left edge of the screen.
  - **Right only** - Places the button on right edge of the screen.
• **Start in** - Select the initial DCP state.
• **Fullscreen mode** - DCP covers the whole screen.
• **Button mode** - DCP displays as a circular button on the screen and can be switched to fullscreen mode.
• **Button only mode** - DCP displays as a circular button on the screen and cannot be switched to fullscreen mode.

• **Button highest position** - Select the top of the range the user is allowed to move the DCP, given as a percent of the screen height (default - 0).
• **Button lowest position** - Select the bottom of the range the user is allowed to move the DCP, given as a percent of the screen height (default - 100).
• **Drag detect time** - Select the time in milliseconds that the scanner waits before activating scanner. This allows the user to drag the button without initiating scanner (default - 100 ms, maximum 1000 ms).

**NOTE** The DCP does not appear if the scanner is disabled in the profile even though the **Enabled** option is set.

---

**Figure 4-10**  *Fullscreen Mode*

Swipe down to return to button mode.

**Bar Code Input**

Use the **Bar Code Input** options to configure the Bar Code Scanner Input Plug-in for the profile.

**Enabled**

Enables or disables this plug-in. A check in the checkbox indicates that the plug-in is enabled.

**Scanner Selection**

Configures which scanning device to use for bar code data capture when the profile is active.

• **Auto** - The software automatically determines the best scanning device.
• **2D Imager** - Scanning is performed using the internal 2D Imager.
• **Camera** - Scanning is performed using the internal camera.
• **Bluetooth Scanner** - Scanning is performed using the optional RS507 imager.
Decoders

Configures which bar code decoders are enabled or disabled. For best performance disable all unnecessary decoders.

Touch Decoders. The Barcode input screen appears. A check in the checkbox indicates that the decoder is enabled. By default the most commonly used decoders are enabled (shown below with an asterisk). The supported decoders are:

<table>
<thead>
<tr>
<th>UPC-A*</th>
<th>UPC-E0*</th>
<th>EAN-13*</th>
</tr>
</thead>
<tbody>
<tr>
<td>EAN-8*</td>
<td>Code 128*</td>
<td>Code 39*</td>
</tr>
<tr>
<td>Interleaved 2 of 5</td>
<td>GS1 DataBar*</td>
<td>GS1 DataBar Limited</td>
</tr>
<tr>
<td>GS1 DataBar Expanded</td>
<td>Datamatrix*</td>
<td>QR Code*</td>
</tr>
<tr>
<td>PDF417*</td>
<td>Composite AB</td>
<td>Composite C</td>
</tr>
<tr>
<td>MicroQR</td>
<td>Aztec*</td>
<td>Maxicode*</td>
</tr>
<tr>
<td>MicroPDF</td>
<td>USPostnet</td>
<td>USPlanet</td>
</tr>
<tr>
<td>UK Postal</td>
<td>Japanese Postal</td>
<td>Australian Postal</td>
</tr>
<tr>
<td>Canadian Postal</td>
<td>Dutch Postal</td>
<td>US4state FICS</td>
</tr>
<tr>
<td>Codabar*</td>
<td>MSI</td>
<td>Code 93</td>
</tr>
<tr>
<td>Trioptic 39</td>
<td>Discrete 2 of 5</td>
<td>Chinese 2 of 5</td>
</tr>
<tr>

<td>Code 11</td>
<td>TLC 39</td>
</tr>
<tr>
<td>Matrix 2 of 5</td>
<td>UPC-E1</td>
<td></td>
</tr>
</tbody>
</table>

Press ← to return to the previous screen.

Decoder Params

NOTE Not all of the options listed below are supported by the selected scanning option. See the DataWedge Settings screen for specific supported options.

Use Decode Params to configure individual decoder parameters.

UPCA

- **Report Check Digit** - The check digit is the last character of the symbol used to verify the integrity of the data. Enables or disables this option. A check in the checkbox indicates that the option is enabled (default - enabled).
- **Preamble** - Preamble characters are part of the UPC symbol consisting of Country Code and System Character. Select the appropriate option to match the host system.
  - There are three options for transmitting a UPCA preamble:
    - **Preamble None** - Transmit no preamble.
    - **Preamble Sys Char** - Transmit System Character only (default).
    - **Preamble Country and Sys Char** - Transmit System Character and Country Code (“0” for USA). Select the appropriate option to match the host system.
**UPCE0**

- **Report Check Digit** - The check digit is the last character of the symbol used to verify the integrity of the data. Enables or disables this option. A check in the checkbox indicates that the option is enabled (default - disabled).

- **Preamble** - Preamble characters are part of the UPC symbol consisting of Country Code and System Character. Select the appropriate option to match the host system.
  
  There are three options for transmitting a UPCE0 preamble:
  
  - **Preamble Sys Char** - Transmit System Character only.
  - **Preamble Country and Sys Char** - Transmit System Character and Country Code ("0" for USA).
  - **Preamble None** - Transmit no preamble (default).

- **Convert UPCE0 To UPCA** - Enable to convert UPCE0 (zero suppressed) decoded data to UPC-A format before transmission. After conversion, the data follows UPC-A format and is affected by UPC-A programming selections. Disable to transmit UPCE0 decoded data as UPCE0 data, without conversion (default - disabled).

**Code128**

- **Length1** - Use to set decode lengths (default - 0). See *Decode Lengths on page 4-14* for more information.

- **Length2** - Use to set decode lengths (default - 55). See *Decode Lengths on page 4-14* for more information.

- **Redundancy** - Sets the reader to read the bar code twice before accepting data. A check in the checkbox indicates that redundancy is enabled (default - disabled).

- **Enable Plain Code 128** - Flag to enable other 128 sub types (besides GS1-128 and ISBT-128).

- **Enable GS1-128** - Set the GS1 128 subtype. A check in the checkbox indicates that the option is enabled (default - enabled).

- **Enable ISBT128** - Set the ISBT128 subtype. A check in the checkbox indicates that the option is enabled (default - enabled).

- **ISBT128 Concatenation Mode** - Select an option for concatenating pairs of ISBT code types:
  - **Concat Mode Never** - Do not concatenate pairs of ISBT codes encountered (default).
  - **Concat Mode Always** - There must be two ISBT codes in order to decode and perform concatenation. Does not decode single ISBT symbols.
  - **Concat Mode Auto** - Decodes and concatenates pairs of ISBT codes immediately. If only a single ISBT symbol is present, the device must decode the symbol the number of times set via DataWedge Configuration 4 - 11 Redundancy - Code128 before transmitting its data to confirm that there is no additional ISBT symbol.

- **Check ISBT Table** - The ISBT specification includes a table that lists several types of ISBT bar codes that are commonly used in pairs. If ISBT128 Concat Mode is set, enable Check ISBT Table to concatenate only those pairs found in this table. Other types of ISBT codes are not concatenated. A check in the checkbox indicates that redundancy is enabled (default - disabled).
• **Security Level** - The scanner offers four levels of decode security for Code 128 bar codes. Select increasing levels of security for decreasing levels of bar code quality. There is an inverse relationship between security and scanner aggressiveness, so choose only that level of security necessary for any given application.

  • **Security Level 0** - This setting allows the scanner to operate in its most aggressive state, while providing sufficient security in decoding most “in-spec” bar codes.
  
  • **Security Level 1** - This setting eliminates most misdecodes (default).
  
  • **Security Level 2** - Select this option if Security level 1 fails to eliminate misdecodes.
  
  • **Security Level 3** - If Security Level 2 is selected and misdecodes still occur, select this security level. Be advised, selecting this option is an extreme measure against mis-decoding severely out of spec bar codes. Selecting this level of security significantly impairs the decoding ability of the scanner. If this level of security is needed, try to improve the quality of the bar codes.

• **Code128 Reduced Quiet Zone** - Enables decoding of margin-less Code 128 bar codes.

• **Ignore Code128 FCN4** - When enabled, and a Code 128 bar code has an embedded FNC4 character, it will be removed from the data and the following characters will not be changed. When the feature is disabled, the FNC4 character will not be transmitted but the following character will have 128 added to it (default - disabled).

**Code39**

• **Length1** - Use to set decode lengths (default - 0). See *Decode Lengths on page 4-14* for more information.

• **Length2** - Use to set decode lengths 4 (default - 55). See *Decode Lengths on page 4-14* for more information.

• **Verify Check Digit** - Enable this feature to check the integrity of all Code 39 symbols to verify that the data complies with a specified check digit algorithm. The digital scanner decodes only those Code 39 symbols that include a modulo 43 check digit. Enable this feature only if the Code 39 symbols contain a modulo 43 check digit (default - disabled).

• **Report Check Digit** - Transmit Code 39 data with or without the check digit. A check in the checkbox indicates to send Code 39 data with check digit (default - disabled).

• **Full ASCII** - Code 39 Full ASCII is a variant of Code 39 that pairs characters to encode the full ASCII character set. To enable or disable Code 39 Full ASCII (default - disabled),

• **Redundancy** - Sets the reader to read the bar code twice before accepting data. A check in the checkbox indicates that redundancy is enabled (default - disabled).

• **Convert Code39 To Code32** - Code 32 is a variant of Code 39 used by the Italian pharmaceutical industry. Scan the appropriate bar code below to enable or disable converting Code 39 to Code 32 (default - disabled).

• **Report Code32 Prefix** - Scan the appropriate bar code to enable or disable adding the prefix character “A” to all Code 32 bar codes (default - disabled).

• **Security Level** - Options: Security level 0, Security Level 1, Security Level 2 and Security Level 3 (default - Security level 1).

• **Code39 Reduced Quiet Zone** - Enables decoding of margin-less Code 39 bar codes (default - disabled).

**Interleaved 2 of 5**

• **Length1** - Use to set decode lengths (default - 14). See *Decode Lengths on page 4-14* for more information.

• **Length2** - Use to set decode lengths (default - 10). See *Decode Lengths on page 4-14* for more information.

• **Redundancy** - Sets the reader to read the bar code twice before accepting data. A check in the checkbox indicates that redundancy is enabled (default - enabled).
- **Check Digit**
  - **No Check Digit** - A check digit is not used (default).
  - **USS Check Digit** - Select to check the integrity of all Interleaved 2 of 5 symbols to verify the data complies with either the Uniform Symbology Specification (USS) check digit algorithm.
  - **OPCC Check Digit** - Select to check the integrity of all Interleaved 2 of 5 symbols to verify the data complies with either the Optical Product Code Council (OPCC) check digit algorithm.
  - **Report Check Digit** - Transmit Interleaved 2 of 5 data with or without the check digit. A check in the checkbox indicates to send Interleaved 2 of 5 data with check digit (default - disabled).
  - **Convert ITF-14 To EAN13** - Convert 14-character Interleaved 2 of 5 bar codes to EAN-13, and transmit as EAN-13. The Interleaved 2 of 5 bar code must be enabled and must have a leading zero and a valid EAN-13 check digit. A check in the checkbox indicates that the option is enabled (default - disabled).
  - **I2of5 Reduced Quiet Zone** - Enables decoding of margin-less I2of5 bar codes (default - disabled).

**GS1 DataBar Limited**

**Composite AB**
- **UCC Link Mode**
  - **Link Flag ignored** - 1D component is transmitted regardless of whether a 2D component is detected.
  - **Always Linked** - 1D and the 2D components are transmitted. If 2D is not present, the 1D component is not transmitted.
  - **Auto Discriminate** - the digital scanner determines if there is a 2D portion, then transmits the 1D component, as well as the 2D portion if present (default).

**US Postnet**
- **Report Check Digit** - Transmit US Postnet data with or without the check digit. A check in the checkbox indicates to send US Postnet data with check digit (default - disabled).

**US Planet**
- **Report Check Digit** - Transmit US Planet data with or without the check digit. A check in the checkbox indicates to send US Planet data with check digit (default - disabled).

**UK Postal**
- **Report Check Digit** - Transmit UK Postal data with or without the check digit. A check in the checkbox indicates to send UK Postal data with check digit (default - disabled).

**Codabar**
- **Length1** - Use to set decode lengths (default - 6). See *Decode Lengths on page 4-14* for more information.
- **Length2** - Use to set decode lengths (default - 55). See *Decode Lengths on page 4-14* for more information.
- **Redundancy** - Sets the reader to read the bar code twice before accepting data. A check in the checkbox indicates that redundancy is enabled (default - enabled).
• **CLSI Editing** - Enable this parameter to strip the start and stop characters and insert a space after the first, fifth, and tenth characters of a 14-character Codabar symbol. Enable this feature if the host system requires this data format (default - disabled).

• **NOTIS Editing** - Enable this parameter to strip the start and stop characters from a decoded Codabar symbol. Enable this feature if the host system requires this data format (default - disabled).

**MSI**

• **Length 1** - Use to set decode lengths (default - 4). See *Decode Lengths on page 4-14* for more information.

• **Length 2** - Use to set decode lengths (default - 55). See *Decode Lengths on page 4-14* for more information.

• **Redundancy** - Sets the reader to read the bar code twice before accepting data. A check in the checkbox indicates that redundancy is enabled (default - enabled).

• **Check Digit** - With MSI symbols, one check digit is mandatory and always verified by the reader. The second check digit is optional.
  
  • **One Check Digit** - Verify one check digit (default).
  
  • **Two Check Digits** - Verify two check digits.

• **Check Digit Scheme** - Two algorithms are possible for the verification of the second MSI check digit. Select the algorithm used to encode the check digit.
  
  • **Mod-11-10** - First check digit is MOD 11 and second check digit is MOD 10 (default).
  
  • **Mod-10-10** - Both check digits are MOD 10.

• **Report Check Digit** - Transmit MSI data with or without the check digit. A check in the checkbox indicates to send MSI data with check digit (default - disabled).

**Code93**

• **Length 1** - Use to set decode lengths (default - 0). See *Decode Lengths on page 4-14* for more information.

• **Length 2** - Use to set decode lengths (default - 55). See *Decode Lengths on page 4-14* for more information.

• **Redundancy** - Sets the reader to read the bar code twice before accepting data. A check in the checkbox indicates that redundancy is enabled (default - disabled).

**Trioptic 39**

• **Redundancy** - Sets the reader to read the bar code twice before accepting data. A check in the checkbox indicates that redundancy is enabled (default - disabled).

**Discrete 2 of 5**

• **Length 1** - Use to set decode lengths (default - 0). See *Decode Lengths on page 4-14* for more information.

• **Length 2** - Use to set decode lengths (default - 14). See *Decode Lengths on page 4-14* for more information.

• **Redundancy** - Sets the reader to read the bar code twice before accepting data. A check in the checkbox indicates that redundancy is enabled (default - enabled).

**Code 11**

• **Length 1** - Use to set decode lengths (default - 4). See *Decode Lengths on page 4-14* for more information.

• **Length 2** - Use to set decode lengths (default - 55). See *Decode Lengths on page 4-14* for more information.
- **Redundancy** - Sets the reader to read the bar code twice before accepting data. A check in the checkbox indicates that redundancy is enabled (default - enabled).

- **Verify Check Digit** - Check the integrity of all Code 11 symbols to verify that the data complies with the specified check digit algorithm. This selects the check digit mechanism for the decoded Code 11 bar code.
  - **No Check Digit** - Do not verify check digit.
  - **1 Check Digit** - Bar code contains one check digit (default).
  - **2 Check Digits** - Bar code contains two check digits.

- **Report Check Digit** - Transmit Code 11 data with or without the check digit. A check in the checkbox indicates to send Code 11 data with check digit (default - disabled).

**HAN XIN**

- **HAN XIN Inverse**
  - **Disable** - Disables decoding of HAN XIN inverse bar codes (default).
  - **Enable** - Enables decoding of HAN XIN inverse bar codes.
  - **Auto** - Decodes both HAN XIN regular and inverse bar codes.

**Matrix 2 of 5**

- **Length1** - Use to set decode lengths (default - 10). See [Decode Lengths on page 4-14](#) for more information.
- **Length2** - Use to set decode lengths (default - 0). See [Decode Lengths on page 4-14](#) for more information.
- **Redundancy** - Sets the reader to read the bar code twice before accepting data. A check in the checkbox indicates that redundancy is enabled (default - disabled).
- **Report Check Digit** - Transmit Matrix 2 of 5 data with or without the check digit. A check in the checkbox indicates to send Matrix 2 of 5 data with check digit (default - enabled).
- **Verify Check Digit** - Enable this feature to check the integrity of all Matrix 2 of 5 symbols to verify that the data complies with a specified check digit algorithm (default - enabled).

**UPCE1**

- **Report Check Digit** - The check digit is the last character of the symbol used to verify the integrity of the data. Enables or disables this option. A check in the checkbox indicates that the option is enabled (default - disabled).
- **Preamble** - Preamble characters are part of the UPC symbol consisting of Country Code and System Character. Select the appropriate option to match the host system.
  - **Preamble Sys Char** - Transmit System Character only.
  - **Preamble Country and Sys Char** - Transmit System Character and Country Code (“0” for USA).
  - **Preamble None** - Transmit no preamble (default).
- **Convert UPCE1 To UPCA** - Enable this to convert UPCE1 decoded data to UPC-A format before transmission. After conversion, the data follows UPC-A format and is affected by UPC-A programming selections. Disable this to transmit UPCE1 decoded data as UPCE1 data, without conversion (default - disabled).

**Decode Lengths**

The allowable decode lengths are specified by options **Length1** and **Length2** as follows:
• Variable length: Decode symbols containing any number of characters.
  • Set both Length1 and Length2 to 0.
• Range: Decode a symbol with a specific length range (from a to b, including a and b).
  • Set Length1 to a and set Length2 to b.
• Two Discrete Lengths: Decode only symbols containing either of two selected lengths.
  • Set both Length1 or Length2 to the specific lengths. Length1 must be greater than Length2.
• One Discrete Length: Decode only symbols containing a specific length.
  • Set both Length1 and Length2 to the specific length.

**UPC EAN Params**

- **NOTE** Not all of the options listed below are supported by the selected scanning option. See the DataWedge Settings screen for specific supported options.

Allows the configuration of the parameters that apply to more than one UPC or EAN decoder.

- **Security Level** - The scanner offers four levels of decode security for UPC/EAN bar codes. Select higher security levels for lower quality bar codes. There is an inverse relationship between security and decode speed, so be sure to choose only that level of security necessary for the application.
  - **Level 0** - This default setting allows the scanner to operate fastest, while providing sufficient security in decoding “in-spec” UPC/EAN bar codes.
  - **Level 1** - As bar code quality levels diminish, certain characters become prone to misdecodes before others (i.e., 1, 2, 7, 8). If the scanner is misdecoding poorly printed bar codes, and the misdecodes are limited to these characters, select this security level (default).
  - **Level 2** - If the scanner is misdecoding poorly printed bar codes, and the misdecodes are not limited to characters 1, 2, 7, and 8, select this security level.
  - **Level 3** - If the scanner is still misdecoding, select this security level. Be advised, selecting this option is an extreme measure against misdecoding severely out of spec bar codes. Selecting this level of security can significantly impair the decoding ability of the scanner. If this level of security is necessary, try to improve the quality of the bar codes.
- **Supplemental2** - Enables or disables this option. A check in the checkbox indicates that the option is enabled.
- **Supplemental5** - Enables or disables this option. A check in the checkbox indicates that the option is enabled.
- **Supplemental Mode**
  - **No Supplementals** - the scanner is presented with a UPC/EAN plus supplemental symbol, the scanner decodes UPC/EAN and ignores the supplemental characters (default).
  - **Supplemental Always** - the scanner only decodes UPC/EAN symbols with supplemental characters, and ignores symbols without supplementals.
  - **Supplements Auto** - the scanner decodes UPC/EAN symbols with supplemental characters immediately. If the symbol does not have a supplemental, the scanner must decode the bar code the number of times set via UPC/EAN Supplemental Redundancy before transmitting its data to confirm that there is no supplemental.
  - **Supplemental Smart** - Enables smart supplementals. In this mode the decoder returns the decoded value of the main block right away if it does not belong to one of the following supplemental types: 378, 379, 977, 978, 979, 414, 419, 434 or 439. If the bar code starts with one of the prefixes it searches the
image more aggressively for a supplemental. Tries to scan the supplemental if it is present. If the supplemental scanning failed, then the main bar code is returned.

- **Supplemental 378-379** - Enables (auto-discriminate) supplemental for UPC/EAN codes starting with 378 or 379. Disables reading of supplementals for any other UPC/EAN bar code not starting with 378 or 379. Tries to scan the supplemental if it is present. If the supplemental scanning failed, then the main bar code is returned.

- **Supplemental 978-979** - Enables (auto-discriminate) supplemental for UPC/EAN codes starting with 978 or 979. Disables reading of supplementals for another UPC/EAN bar code not starting with 978 or 979. Tries to scan the supplemental if it is present. If the supplemental scanning failed, then the main bar code is returned.

- **Supplemental 414-419-434-439** - Enables (auto-discriminate) supplemental for UPC/EAN codes starting with 414, 419, 434 or 439. Disables reading of supplementals for another UPC/EAN bar code not starting with 414, 419, 434 or 439. Tries to scan the supplemental if it is present. If the supplemental scanning failed, then the main bar code is returned.

- **Supplemental 977** - Enables (auto-discriminate) supplemental for UPC/EAN codes starting with 977. Disables reading of supplementals for another UPC/EAN bar code not starting with 977. Tries to scan the supplemental if it is present. If the supplemental scanning failed, then the main bar code is returned.

- **Retry Count** - Retry count for auto-discriminating for supplementals. Possible values are 2 to 20 inclusive. Note that this flag is only considered if **Supplemental Mode - UPC EAN** is set to one of the following values: **Supplementals Auto**, **Supplementals Smart**, **Supplementals 378-379**, **Supplementals 978-979**, **Supplementals 977** or **Supplementals 414-419-434-439** (2 to 20, default 10).

- **Linear Decode** - Not used.

- **Bookland** - Enable Bookland decoding. A check in the checkbox indicates that the option is enabled.

- **Coupon** - Enables Coupon code decoding. Note that in order to successfully decode Coupon codes, all of the correct decoders must be enabled. A check in the checkbox indicates that the option is enabled.

- **Coupon Repost Mode** - Traditional coupon symbols are composed of two bar code: UPC/EAN and Code 128. A new coupon symbol is composed of a single Data Expanded bar code. The new format offers more options for purchase values (up to $999,999) and supports complex discount offers as a second purchase requirement. An interim coupon symbol also exists that contain both types of bar codes: UPC/EAN and Databar Expanded. This format accommodates both retailers that do not recognize or use the additional information included in the new coupon symbol, as well as those who can process new coupon symbols.

- **Old Coupon Report Mode** - Scanning an old coupon symbol reports both UPC and Code 128, scanning is interim coupon symbol reports UPC, and scanning a new coupon symbol reports nothing (no decode).

- **New Coupon Report Mode** - Scanning an old coupon symbol reports either UPC or Code 128, and scanning an interim coupon symbol or a new coupon symbol reports Databar Expanded.

- **Both Coupon Report Modes** - Scanning an old coupon symbol reports both UPC and Code 128, and scanning an interim coupon symbol or a new coupon symbol reports Databar Expanded.

- **Ean Zero Extended** – Enable this parameter to add five leading zeros to decoded EAN-8 symbols to make them compatible in format to EAN-13 symbols. Disable this to transmit EAN-8 symbols as is. Default – disabled.

- **Convert DataBar To UPC EAN** - If this is set it converts DataBar bar codes to UPC/EAN format. For this setting to work UPC/EAN symbologies must be enabled. A check in the checkbox indicates that the option is enabled.

- **UPC Reduced Quiet Zone** - Enables decoding of margin-less UPC bar codes (default - disabled).
Reader Params

• **Illumination mode** - Turns illumination on and off.
  • **On** - Illumination is on.
  • **Off** - Illumination is off (default).

• **Aiming Pattern** - Turns imager aiming pattern on or off during data capture. **On** (default) or **Off**.

• **Aim Type**
  • **Trigger** - The device decodes a bar code on each Scan button press (default).
  • **Timed Hold** - Once Scan button is pressed an aiming session starts for a time specified by **Aim Timer**. When this time expires decoding begins and scan beam is visible. The decoding remains active until the **Beam Timer** expires, the Scan button is released or a bar code is decoded.
  • **Timed Release** - Once Scan button is pressed an aiming session starts and continues until the Scan button is released. If the **Aim Timer** expires when the Scan button is released then a decode session starts with the scan beam visible for a remaining time equal to **Beam Timer** or a bar code is decoded.
  • **Press and Release** - Scan beam starts when trigger is pressed and released. The decode session remains active until the **Beam Timer** expired or a bar code is decoded.
  • **Continuous Read** - The device continuously decodes bar codes as long as the Scan button is held down and the previous bar code decoding is complete. This mode is useful when the user wants to perform rapid scanning. Not supported with the RS507 Bluetooth imager.
  • **Aim Timer** - Specifics the amount of time that the aiming lasts before decoding.
  • **Beam Timer** - Sets the maximum amount of time that the reader remains on (0 - 60,000 ms in increments of 100 ms). A value of 0 sets the reader to stay on indefinitely (default - 15000).

• **Image Capture Mode**.
  • **None** - No image capturing (default).
  • **Single Image Capture on Decode** - Captures an image with decoded data.
  • **Image Capture only** - Only captures the image and no bar code data.

• **Linear Security Level** - Sets the number of times a bar code is read to confirm an accurate decode.
  • **Security Short or Codabar** - Two times read redundancy if short bar code or Codabar.
  • **Security All Twice** - Two times read redundancy for all bar codes (default).
  • **Security Long and Short** - Two times read redundancy for long bar codes, three times for short bar codes.
  • **Security All Thrice** - Three times read redundancy for all bar codes.

• **Picklist** - Allows the imager or camera to decode only the bar code that is directly under the cross-hair/reticle (+) part of the pattern. This feature is useful in applications where multiple bar codes may appear in the field of view during a decode session and only one of them is targeted for decode.
  • **Disable** – Disables Picklist mode. Any bar code within the field of view can be decoded (default).
  • **Hardware Picklist** – Enables Picklist mode so that only the bar code under the projected reticle can be decoded.
  • **Software Picklist** - Enables Picklist mode so that only the bar code in the center of the image is decoded.

---

**NOTE** Not all of the options listed below are supported by the selected scanning option. See the **DataWedge Settings** screen for specific supported options.
- **Same Symbol Timeout** - Use to prevent the device from decoding the same bar code within a specific time interval (applicable only when Aim Type is set to **Continuous Read**). The user can perform rapid scanning and prevents the user from decoding the same bar code twice. Set this value to an appropriate interval (in milliseconds). A value of 0 indicates no interval is required between two successive reads (default - 500).

- **Different Symbol Timeout** - Use to prevent the device from decoding another bar code within a specific interval (applicable only when aim type is set to **Continuous Read**). The user may want to prevent decoding too quickly and set an interval that the user can aim before scanning the next bar code. A value of 0 indicates no interval is required between two successive reads (default - 500).

- **LCD Mode** - Enables or disables LCD mode. LCD mode enhances the ability of the imager to read bar codes from LCD displays such as cellphones.
  - **Disable** - Disables the LCD mode (default).
  - **Enable** - Enables LCD mode.

- **HW Engine Low Power Timeout** - Time in milliseconds of non-use before imager goes into a low-power mode.

- **Inverse 1D Mode** - This parameter allows the user to select decoding on inverse 1D bar codes.
  - **Disable** - Disables decoding of inverse 1D bar codes (default).
  - **Enable** - Enables decoding of only inverse 1D bar codes.
  - **Auto** - Allows decoding of both twice positive and inverse 1D bar codes.

- **1D Quiet Zone Level** - Sets the effort the decoder performs to decode margin-less bar codes. Applies to any symbology with margin-less bar code decode enabled parameter. Since higher margin-less levels will increase the mis-decode risk and decoding time, we strongly recommend the user only enable the symbologies which needs to choose higher margin-less level, and leave all other symbologies at low default level 1.

- **Poor Quality Decode Effort** - Enable poor quality bar code decoding enhancement feature.

- **Character Set Selection** - Allows the user to convert the bar code data if different from default encoding type. UTF-8 is the default value. Other options are ISO-8859-1 and Shift_JIS.

- **Viewfinder Mode** - Configures the Viewfinder modes supported for camera scanning.
  - **Viewfinder Enabled** - Enables only the viewfinder.
  - **Static Reticule** - Enables the viewfinder and a red reticle in the center of the screen which helps selecting the bar code (default).

## Scan Params

Allows the configuration of Code ID and decode feedback options.

- **Code ID Type** - A Code ID character identifies the code type of a scanned bar code. This is useful when the reader is decoding more than one code type. Select a code ID character to insert between the prefix and the decoded symbol.
  - **Code ID Type None** - No prefix (default).
  - **Code ID Type Aim** - A standards based three character prefix.
  - **Code ID Type Symbol** - A Symbol defined single character prefix.

**NOTE** Not all ringtones are fully supported as decode tones and those of longer length may be truncated when used as a decode tone. The recommendation is to test the selected tone for operation before deployment to a customer site.
• **Volume Type** - Set the good decode beep to a system or other sound. This allows for independent control of the good beep volume.
  • **Ringer and Notifications** - Set the good decode beep to the ringer and notifications sound. (default)
  • **Music and media** - Set the good decode beep to the music and media sound
  • **Alarms** - Set the good decode beep to the alarm sound

• **Decode Audio Feedback** - Select an audio tone to sound upon a good decode.

• **Decode Haptic Feedback** - Enable the device to vibrate upon a good decode (default - enabled).

• **Decode Feedback LED Timer** - Set the amount of time (in milliseconds) that the green Data Capture LED stays lit after a good decode. (default - 75 msec.)

• **Decoding LED Notification** - Enable the device to light the red Data Capture LED when data capture is in progress. (default - disabled).

**MSR Input**

Use **MSR Input** options to configure the MSR Input Plug-in for the profile.

• **Enabled** — Enables or disables this plug-in. A check in the checkbox indicates that the plug-in is enabled.

**Keystroke Output**

Use to configure the Keystroke Output Plug-in for the profile.

• **Enabled** — Enables or disables this plug-in. A check in the checkbox indicates that the plug-in is enabled (default - enabled).

• **Action key character** - Enables decoding of a special character embedded within a bar code or MSR data for use in native Android applications. This feature is helpful when populating or executing a form.
  • **None** - Action key character feature is disabled (default).
  • **Tab** - Tab character code in a bar code is processed. When DataWedge detects this character code in a bar code, move the focus to the next field.
  • **Line feed** - Line feed character code in a bar code is processed. When DataWedge detects this character code in a bar code, move the focus to the next field.
  • **Carriage return** - Carriage return character code in a bar code is processed. When DataWedge detects this character code in a bar code, move the focus to the next field.

• **Action key character** - Enables decoding of a special character embedded within a bar code data for use in native Android applications. This feature is helpful when populating or executing a form.
  • **None** - Action key character feature is disabled (default).
  • **Tab** - Tab character code in a bar code is processed. When DataWedge detects this character code in a bar code, move the focus to the next field.
  • **Line feed** - Line feed character code in a bar code is processed. When DataWedge detects this character code in a bar code, move the focus to the next field.
  • **Carriage return** - Carriage return character code in a bar code is processed. When DataWedge detects this character code in a bar code, move the focus to the next field.
• **Advanced data formatting** - is a way to customizing data before transmission. Use advanced data formatting (ADF) to edit scan data to suit requirements.
  
  • **Enable** - Enables or disables ADF. A check in the checkbox indicates that ADF is enabled (default - disabled).
  
  • **Rules** - ADF uses rules to customize data. These rules perform detailed actions when the data meets certain criteria. One rule may consist of single or multiple criteria applied to single or multiple actions. See Generating Advanced Data Formatting Rules for more information.
  
  • **Basic data formatting** - Allows the configuration of any data formatting for the related Output Plug-in. When the plug-in is disabled, any data is passed on without modification.
  
  • **Enabled** - Enables or disables Basic Data Formatting. A check in the checkbox indicates that it is enabled (default - enabled).
  
  • **Prefix to data** - Add characters to the beginning of the data when sent.
  
  • **Suffix to data** - Add characters to the end of the data when sent.
  
  • **Send data** - Set to transfer the captured data to the foreground application. Disabling this option prevents the actual data from being transmitted. However, the prefix and suffix strings, if present, are still transmitted even when this option is disabled (default - enabled).
  
  • **Send as hex** - Set to send the data in hexadecimal format. A check in the checkbox indicates that the plug-in is enabled (default - disabled).
  
  • **Send TAB key** - Set to append a tab character to the end of the processed data. A check in the checkbox indicates that the plug-in is enabled (default - disabled).
  
  • **Send ENTER key** - Set to append an Enter character to the end of the processed data. A check in the checkbox indicates that the plug-in is enabled (default - disabled).

**Intent Output**

Allows configuration of the Intent Output Plug-in for the profile. The Intent Output Plug-in allows the captured data to be sent to an application in the form of an implicit Intent. Refer to the Android Developer web site for more information, http://developer.android.com.

• **Enabled** - Enables or disables this plug-in. A check in the checkbox indicates that the plug-in is enabled (default - disabled).

• **Intent action** - Enter the Intent Action name (required).

• **Intent category** - Enter the Intent Category name (required).

• **Intent delivery** - Select the method by which the intent is delivered:
  
  • Send via StartActivity
  
  • Send via startService (default)
  
  • Broadcast intent

• **Advanced data formatting** - is a way to customizing data before transmission. Use advanced data formatting (ADF) to edit scan data to suit requirements.

  • **Enable** - Enables or disables ADF. A check in the checkbox indicates that ADF is enabled (default - disabled).

  • **Rules** - ADF uses rules to customize data. These rules perform detailed actions when the data meets certain criteria. One rule may consist of single or multiple criteria applied to single or multiple actions. See Generating Advanced Data Formatting Rules for more information.
• **Basic data formatting** - Allows configuration of any data formatting for the related Output Plug-in. When the plug-in is disabled any data is passed on without modification.

• **Enabled** - Enables or disables Basic Data Formatting. A check in the checkbox indicates that it is enabled (default - enabled).

• **Prefix to data** - Add characters to the beginning of the data when sent.

• **Suffix to data** - Add characters to the end of the data when sent.

• **Send data** - Set to transfer the captured data to the foreground application. Disabling this option prevents the actual data from being transmitted. However, the prefix and suffix strings, if present, are still transmitted even when this option is disabled (default - enabled).

• **Send as hex** - Set to send the data in hexadecimal format. A check in the checkbox indicates that the plug-in is enabled (default - disabled).

• **Send TAB key** - Set to append a tab character to the end of the processed data. A check in the checkbox indicates that the plug-in is enabled (default - disabled).

• **Send ENTER key** - Set to append an Enter character to the end of the processed data. A check in the checkbox indicates that the plug-in is enabled (default - disabled).

**Intent Overview**

The core components of an Android application (its activities, services, and broadcast receivers) are activated by intents. An intent is a bundle of information (an Intent object) describing a desired action - including the data to be acted upon, the category of component that should perform the action, and other pertinent instructions. Android locates an appropriate component to respond to the intent, launches a new instance of the component if one is needed, and passes it the Intent object.

Components advertise their capabilities, the kinds of intents they can respond to, through intent filters. Since the system must learn which intents a component can handle before it launches the component, intent filters are specified in the manifest as `<intent-filter>` elements. A component may have any number of filters, each one describing a different capability. For example, if the manifest contains the following:

```xml
<intent-filter . . . >
  <action android:name="android.intent.action.DEFAULT" />
  <category android:name="android.intent.category.MAIN" />
</intent-filter>
```

In the Intent output plug-in configuration, the **Intent action** would be:

android.intent.category.DEFAULT

and the **Intent category** would be:

android.intent.category.MAIN.

The **Intent delivery** option allows the method by which the intent is delivered to be specified. The delivery mechanisms are **Send via startActivity**, **Send via startService** or **Broadcast intent**.

The decode related data added to the Intent’s bundle can be retrieved using the `Intent.getStringExtra()` and `Intent.getSerializableExtra()` calls, using the following String tags:
• String LABEL_TYPE_TAG = "com.symbol.emdk.datawedge.label_type";
  • String contains the label type of the bar code.

• String DATA_STRING_TAG = "com.symbol.emdk.datawedge.data_string";
  • String contains the output data as a String. In the case of concatenated bar codes, the decode data is
    concatenated and sent out as a single string.

• String DECODE_DATA_TAG = "com.symbol.emdk.datawedge.decode_data";
  • Decode data is returned as a list of byte arrays. In most cases there will be one byte array per decode. For
    bar code symbologies that support concatenation e.g. Codabar, Code128, MicroPDF, etc., the decoded
    data is stored in multiple byte arrays (one byte array per bar code). Clients can get data in each byte array
    by passing an index.

The MSR related data added to the Intent's bundle can be retrieved using the Intent.getStringExtra() and
Intent.getSerializableExtra() calls, using the following String tags:

• String MSR_DATA_TAG = "com.symbol.emdk.datawedge.msr_data";
  • String contains the output data as a String. The data from the MSR tracks is concatenated and sent out as
    a single string.

• String MSR_TRACK1_TAG = "com.symbol.emdk.datawedge.msr_track1";
  • MSR track 1 data is returned as a byte array.

• String MSR_TRACK2_TAG = "com.symbol.emdk.datawedge.msr_track2";
  • MSR track 2 data is returned as a byte array.

• String MSR_TRACK3_TAG = "com.symbol.emdk.datawedge.msr_track3";
  • MSR track 3 data is returned as a byte array.

• String MSR_TRACK1_STATUS_TAG = "com.symbol.emdk.datawedge.msr_track1_status";
  • MSR track 1 decode status as an Integer where 0 indicates a successful decode.

• String MSR_TRACK2_STATUS_TAG = "com.symbol.emdk.datawedge.msr_track2_status";
  • MSR track 2 decode status as an Integer where 0 indicates a successful decode.

• String MSR_TRACK3_STATUS_TAG = "com.symbol.emdk.datawedge.msr_track3_status";
  • MSR track 3 decode status as an Integer where 0 indicates a successful decode.

Most scanning applications might want the user to be able to decode data and for that decode data to be sent to
the *current* activity but not necessarily displayed. If this is the case, then the activity needs to be marked as
'singleTop' in its AndroidManifest.xml file. If your activity is not defined as singleTop, then on every decode, the
system will create another copy of your Activity and send the decode data to this second copy.

Finally there will be a configuration option for each process plug-in so that the process plug-in can be configured
specifically for the intent output, which in this case is the basic data formatting process plug-in.

IP Output

✓ **NOTE** IPWedge application is required on a host computer. Download the IPWedge application from the Support
Central web site: http://www.zebra.com/support.

IP Output allows DataWedge to send captured data to a host computer via a network connection. Captured data
can be sent over an IP network to a specified IP address and port using either TCP or UDP transport protocols.
• **Enabled** - Enables or disables this plug-in. A check in the checkbox indicates that the plug-in is enabled (default - disabled).

• **Remote Wedge** - Enable or disable the Remote Wedge option (default - enabled). Remote Wedge is used with the IPWedge application.

• **Protocol** - Select the protocol used by the remote application. Options: **TCP** (default) or **UDP**.

• **IP address** - Enter the IP address used by the remote application (default - 0.0.0.0).

• **Port** - Enter the port number used by the remote application (default - 58627).

• **Advanced data formatting** - is a way of customizing data before transmission. Use advanced data formatting (ADF) to edit scan data to suit requirements.
  - **Enable** - Enables or disables ADF. A check in the checkbox indicates that ADF is enabled (default - disabled).
  - **Rules** - ADF uses rules to customize data. These rules perform detailed actions when the data meets certain criteria. One rule may consist of single or multiple criteria applied to single or multiple actions. See *Generating Advanced Data Formatting Rules on page 4-26* for more information.

• **Basic data formatting** - Allows configuration of any data formatting for the related Output Plug-in. When the plug-in is disabled any data is passed on without modification.
  - **Enabled** - Enables or disables Basic Data Formatting. A check in the checkbox indicates that it is enabled (default - enabled).
  - **Prefix to data** - Add characters to the beginning of the data when sent.
  - **Suffix to data** - Add characters to the end of the data when sent.
  - **Send data** - Set to transfer the captured data to the foreground application. Disabling this option prevents the actual data from being transmitted. However, the prefix and suffix strings, if present, are still transmitted even when this option is disabled (default - enabled).
  - **Send as hex** - Set to send the data in hexadecimal format. A check in the checkbox indicates that the plug-in is enabled (default - disabled).
  - **Send TAB key** - Set to append a tab character to the end of the processed data. A check in the checkbox indicates that the plug-in is enabled (default - disabled).
  - **Send ENTER key** - Set to append an Enter character to the end of the processed data. A check in the checkbox indicates that the plug-in is enabled (default - disabled).

**Usage**

This section provides information on how to configure IP Output using the DataWedge configuration user interface. To use IP Output in a particular DataWedge profile (for example: **Profile0**), scroll downward on **IP Output**.
Using IP Output with IPWedge

IPWedge is a computer application that can be easily configured to retrieve data sent over network by DataWedge IP Output. Refer to the IPWedge User Manual on how to install and configure in a host computer. To enable IP Output to send captured data to a remote computer that is installed with IPWedge:

1. In IP Output, touch Enabled.
   A check appears in the checkbox.

2. Ensure Remote Wedge option is enabled.

4. In the Choose protocol dialog box, touch the same protocol selected for the IPWedge computer application. (TCP is the default).

5. Touch IP Address.

6. In the Enter IP Address dialog box, enter the IP address of host computer to send data to.

7. Touch Port.
8. In the **Enter port number** dialog box, enter same port number selected for IPWedge computer application.

![Port Number Entry](image)

**Figure 4-14**  *Port Number Entry*

9. Configure **Advanced data formatting** and **Basic data formatting** Plug-in if any required modification to be done to captured data before sending to remote computer.

**Using IP Output without IPWedge**

IP Output Plug-in can be used to send captured data from DataWedge to a remote device or host computer without using IPWedge. At the data receiving end, the host computer or mobile device should have an application that listens to TCP or UDP data coming from a configured port and IP address in the IP Output plug-in. To enable IP Output to send captured data to a remote computer:

1. In **IP Output**, touch **Enabled**.
   
   A check appears in the checkbox.

2. Ensure **Remote Wedge** option is disabled.

3. Touch **Protocol**.

4. In the **Choose protocol** dialog box, touch the same protocol selected in the client application. (TCP is the default).

![Protocol Selection](image)

**Figure 4-15**  *Protocol Selection*

5. Touch **IP Address**.

6. In the **Enter IP address** dialog box, enter the IP address of host computer to send data to.

![IP Address Entry](image)

**Figure 4-16**  *IP Address Entry*

7. Touch **Port**.

8. In the **Enter port number** dialog box, enter the port number that the host computer application is listening on.
9. Configure **Advanced Data Formatting** and **Basic Data Formatting** Plug-in if any required modification to be done to captured data before sending to remote computer.

---

**Generating Advanced Data Formatting Rules**

The ADF plug-in applies rules (actions to be performed based on defined criteria) to the data received via an input plug-in before sending it to the output plug-in.

- **Rules** - The ADF process plug-in consists of one or more rules. DataWedge formats the output data according to the first matching rule. A rule is a combination of criteria and a set of actions to be performed, upon fulfillment of the criteria set in the rule.

- **Criteria** - Criteria can be set according to Input plug-in, symbology, matching string within the data (at the specified position) and/or data length. Received data must match the defined criteria in order for the data to be processed.

- **Actions** - A set of procedures defined to format data. There are four types of actions which are for formatting cursor movement, data modification, data sending and delay specifications. An action can be defined to send the first number of characters to the Output plug-in, pad the output data with spaces or zeros, remove spaces in data, etc.

**Configuring ADF Plug-in**

Configuring the ADF plug-in consists of creating a rule, defining the criteria and defining the actions.

1. Touch 📖 > 📖.
2. Touch a DataWedge profile.
3. In **Keystroke Output**, touch **Advanced data formatting**.

![Advanced Data Formatting Screen](image)
4. Touch the **Enable** checkbox to enable ADF.

**Creating a Rule**

![Rule List Screen](image1)

> **NOTE** By default, Rule0, is the only rule in the Rules list.

1. Touch .
2. Touch **New rule**.
3. Touch the **Enter rule name** text box.
4. In the text box, enter a name for the new rule.
5. Touch **OK**.

**Defining a Rule**

1. Touch the newly created rule in the **Rules** list.

![Criteria Screen](image2)

2. Touch the **Rule enabled** checkbox to enable the current rule.

**Defining Criteria**

1. Touch **Criteria**.
2. Touch **String to check for** option to specify the string that must be present in the data.

3. In the **Enter the string to check for** dialog box, enter the string.

4. Touch **OK**.

5. Touch **String position** option to specify the position of the string specified in the **String to check for** option. The ADF rule is only applied if the specific string in **String to check for** is found at the specified **String position** location (zero for the start of the string).

6. Touch the + or - to change the value.

7. Touch **OK**.

8. Touch **String length option** to specify a length for the received data. The ADF rule only applies to the bar code data with that specified length.

9. Touch the + or - to change the value.

10. Touch **OK**.

11. Touch **Source criteria** option to associate an input device to an ADF rule. The ADF rule only applies to data received from associated input devices.

12. Touch **Barcode input** or **MSR input**. Options vary depending upon the device configuration.

13. Touch the **Source enabled** checkbox to accept data from this source.

![Source criteria: Barcode input](image)

**Figure 4-21**  *Barcode Input Screen*

14. For **Barcode inputs**, touch the **All decoders enabled** checkbox to select all bar code symbologies. Deselect the **All decoders enabled** checkbox to individually select the symbologies.

15. Press \( \leftarrow \rightarrow \) until the **Rule** screen appears.

16. If required, repeat steps to create another rule.

**Defining an Action**

![NOTE](image)

**NOTE**  By default the **Send remaining** action is in the **Actions** list.

1. Press \( \equiv \).

2. Touch **New action**.
3. In the New action menu, select an action to add to the Actions list. See Table 4-1 on page 4-29 for a list of supported ADF actions.

4. Some Actions require additional information. Touch the Action to display additional information fields.

5. Repeat steps to create more actions.

6. Press \(\rightarrow\).

**Deleting a Rule**

1. Touch and hold on a rule until the context menu appears.

2. Touch Delete rule to delete the rule from the Rules list.

When there is no rule available for ADF plug-in or all rules are disabled, DataWedge passes decoded data to the output plug-in without processing the data.

**Order Rules List**

\(\checkmark\) When there are no rules defined, ADF passes the captured data through as is. In contrast, when rules are defined but all are disabled, ADF does not pass any captured data through.

Rules are processed in top-down order. The rules that are on top of the list are processed first. Use the icon next to the rule to move it to another position in the list.

**Table 4-1  ADF Supported Actions**

<table>
<thead>
<tr>
<th>Type</th>
<th>Actions</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cursor Movement</td>
<td>Skip ahead</td>
<td>Moves the cursor forward by a specified number of characters. Enter the number of characters to move the cursor ahead.</td>
</tr>
<tr>
<td></td>
<td>Skip back</td>
<td>Moves the cursor back by a specified number of characters. Enter the number of characters to move the cursor back.</td>
</tr>
<tr>
<td></td>
<td>Skip to start</td>
<td>Moves the cursor to the beginning of the data.</td>
</tr>
<tr>
<td></td>
<td>Move to</td>
<td>Moves the cursor forward until the specified string is found. Enter the string in the data field.</td>
</tr>
<tr>
<td></td>
<td>Move past a</td>
<td>Moves the cursor forward past the specified string. Enter the string in the data field.</td>
</tr>
</tbody>
</table>
### Deleting an Action

1. Touch and hold the action name.
2. Select **Delete action** from the context menu.

### Table 4-1  ADF Supported Actions  (Continued)

<table>
<thead>
<tr>
<th>Type</th>
<th>Actions</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Data Modification</td>
<td>Crunch spaces</td>
<td>Remove spaces between words to one and remove all spaces at the beginning and end of the data.</td>
</tr>
<tr>
<td></td>
<td>Stop space crunch</td>
<td>Stops space crunching. This disables the last <strong>Crunch spaces</strong> action.</td>
</tr>
<tr>
<td></td>
<td>Remove all spaces</td>
<td>Remove all spaces in the data.</td>
</tr>
<tr>
<td></td>
<td>Stop space removal</td>
<td>Stop removing spaces. This disables the last <strong>Remove all spaces</strong> action.</td>
</tr>
<tr>
<td></td>
<td>Remove leading zeros</td>
<td>Remove all zeros at the beginning of data.</td>
</tr>
<tr>
<td></td>
<td>Stop zero removal</td>
<td>Stop removing zeros at the beginning of data. This disables the previous <strong>Remove leading zeros</strong> action.</td>
</tr>
<tr>
<td></td>
<td>Pad with zeros</td>
<td>Left pad data with zeros to meet the specified length. Enter the number zeros to pad.</td>
</tr>
<tr>
<td></td>
<td>Stop pad zeros</td>
<td>Stop padding with zeros. This disables the previous <strong>Pad with zeros</strong> action.</td>
</tr>
<tr>
<td></td>
<td>Pad with spaces</td>
<td>Left pad data with spaces to meet the specified length. Enter the number spaces to pad.</td>
</tr>
<tr>
<td></td>
<td>Stop pad spaces</td>
<td>Stop padding with spaces. This disables the previous <strong>Pad with spaces</strong> action.</td>
</tr>
<tr>
<td></td>
<td>Replace string</td>
<td>Replaces a specified string with a new string. Enter the string to replace and the string to replace it with.</td>
</tr>
<tr>
<td></td>
<td>Stop all replace string</td>
<td>Stop all <strong>Replace string</strong> actions.</td>
</tr>
<tr>
<td>Data Sending</td>
<td>Send next</td>
<td>Sends the specified number of characters from the current cursor position. Enter the number of characters to send.</td>
</tr>
<tr>
<td></td>
<td>Send remaining</td>
<td>Sends all data that remains from the current cursor position.</td>
</tr>
<tr>
<td></td>
<td>Send up to</td>
<td>Sends all data up to a specified string. Enter the string.</td>
</tr>
<tr>
<td></td>
<td>Send pause</td>
<td>Pauses the specified number of milliseconds before continuing the next action. Enter the amount of time in milliseconds.</td>
</tr>
<tr>
<td></td>
<td>Send string</td>
<td>Sends a specified string. Enter the string to send.</td>
</tr>
<tr>
<td></td>
<td>Send char</td>
<td>Sends a specified ASCII/ Unicode character. Enter a character value. The maximum Unicode character value can be entered is U-10FFFF (= 1114111 in decimal).</td>
</tr>
</tbody>
</table>
ADF Example

The following illustrates an example of creating Advanced Data Formatting:

When a user scans a bar code with the following criteria:

- Code 39 bar code.
- length of 12 characters.
- contains 129 at the start position.

Modify the data as follows:

- Pad all sends with zeros to length 8.
- send all data up to character X.
- send a space character.

To create an ADF rule for the above example:

1. Touch 📅.
2. Touch DataWedge.
3. Touch Profile0.
5. Touch Enable.
6. Touch Rule0.
7. Touch Criteria.
8. Touch String to check for.
9. In the Enter the string to check for text box, enter 129 and then touch OK.
10. Touch String position.
11. Change the value to 0.
12. Touch OK.
13. Touch String length.
14. Change value to 12.
15. Touch OK.
16. Touch Source criteria.
17. Touch Barcode input.
18. Touch All decoders enabled to disable all decoders.
20. Press 🔄 three times.
21. Touch and hold on the Send remaining rule until a menu appears.
22. Touch **Delete action**.

23. Press \(\text{ }\).

24. Touch **New action**.

25. Select **Pad with zeros**.

26. Touch the **Pad with zeros** rule.

27. Touch **How many**.

28. Change value to 8 and then touch **OK**.

29. Press \(\text{ }\).

30. Press \(\text{ }\).

31. Touch **New action**.

32. Select **Send up to**.

33. Touch **Send up to** rule.

34. Touch **String**.

35. In the **Enter a string** text box, enter \(X\).

36. Touch **OK**.

37. Press \(\text{ }\).

38. Press \(\text{ }\).

39. Touch **New action**.

40. Select **Send char**.

41. Touch **Send char** rule.

42. Touch **Character code**.

43. In the **Enter character code** text box, enter 32.

44. Touch **OK**.

45. Press \(\text{ }\).
46. Ensure that an application is open on the device and a text field is in focus (text cursor in text field).

47. Aim the exit window at the bar code.

48. Press and hold the scan button.

   The red laser aiming pattern turns on to assist in aiming. Ensure that the bar code is within the area formed by the aiming pattern. The LED light red to indicate that data capture is in process.

49. The LED lights green, a beep sounds and the device vibrates, by default, to indicate the bar code was decoded successfully. The LED lights green and a beep sounds, by default, to indicate the bar code was decoded successfully. The formatted data 000129X<space>appears in the text field.

   Scanning a Code 39 bar code of 1299X15598 does not transmit data (rule is ignored) because the bar code data did not meet the length criteria.
DataWedge Settings

The DataWedge Settings screen provides access to general, non-profile related options. Touch ☰ > Settings.

![DataWedge Settings Window](image)

- **DataWedge enabled** - Enables or disables DataWedge. To disable DataWedge uncheck this option.
- **Enable logging** - Enables or disables debug output file to logcat. To enable logging check this option.
- **Import** - allows import of a DataWedge configuration file. The imported configuration replaces the current configuration.
- **Export** - allows export of the current DataWedge configuration to the microSD card.
- **Import Profile** - allows import of a DataWedge profile file.
- **Export Profile** - allows export of a DataWedge profile.
- **Restore** - return the current configuration back to factory defaults.

**Importing a Configuration File**

1. Copy the configuration file to the root of the microSD card.
2. Touch ☰ > ☰.
3. Press ☰.
4. Touch Settings.
5. Touch Import.
6. Touch SD Card.
7. Touch Import. The configuration file (datawedge.db) is imported and replaces the current configuration.

**Exporting a Configuration File**

1. Touch ☰ > ☰.
2. Press ☰.
3. Touch Settings.
4. Touch Export.
5. Touch SD Card.
6. Touch Export. The configuration file (datawedge.db) is saved to the root of the microSD card.

**Importing a Profile File**

- Touch Settings.
- Touch Export Profile.
- Touch Import Profile.
- Touch Import. The profile file (dwprofile_x.db, where x = the name of the profile) is imported and appears in the profile list.

**Exporting a Profile**

- Touch Settings.
- Touch Export Profile.
- Touch Export. The profile file (dwprofile_x.db, where x = name of the profile) is saved to the root of the microSD card.

**Restoring DataWedge**

To restore DataWedge to the factory default configuration:

- Touch Settings.
- Touch Export.
- Touch Restore.
5. Touch Yes.

Configuration and Profile File Management

The configuration or profile settings for DataWedge can be saved to a file for distribution to other devices.

After making configuration or profile changes, export the new configuration or profile to the root of the microSD card. The configuration file created is automatically named datawedge.db. The profile file created is automatically named dwprofile_x.db, where x is the profile name. The files can then be copied to the microSD card of other devices and imported into DataWedge on those devices. Importing a configuration or profile replaces the existing settings.

Enterprise Folder

Internal storage contains the Enterprise folder (/enterprise). The Enterprise folder is persistent and maintains data after an Enterprise reset. After an Enterprise Reset, DataWedge checks folder /enterprise/device/settings/datawedge/enterprisereset/ for a configuration file, datawedge.db or a profile file, dwprofile_x.db. If the file is found, it imports the file to replace any existing configuration or profile.

✓ **NOTE** A Factory Reset deletes all files in the Enterprise folder.

Auto Import

DataWedge supports remote deployment of a configuration to a device, using MDM tools. DataWedge monitors the /enterprise/device/settings/datawedge/autoimport folder for the DataWedge configuration file (datawedge.db) or a profile file (dwprofile_x.db). When DataWedge launches it checks the folder. If a configuration or profile file is found, it imports the file to replace any existing configuration or profile. Once the file has been imported it is deleted from the folder.

While DataWedge is running it receives a notification from the system that a file has been placed into the /enterprise/device/settings/datawedge/autoimport folder. When this occurs, DataWedge imports this new configuration or profile, replacing the existing one and delete the file. DataWedge begins using the imported configuration immediately.

✓ **NOTE** A Factory Reset deletes all files in the Enterprise folder.

It is strongly recommended that the user exits DataWedge before remotely deploying any configuration or profile. It is required that the file permissions are set to 666.

Programming Notes

The following paragraphs provide specific programming information when using DataWedge.

**Overridding Trigger Key in an Application**

To override the trigger key in an application, create a profile for the application that disables the Barcode input. In the application, use standard APIs, such as onKeyDown() to listen for the KEYCODE_BUTTON_L1 and KEYCODE_BUTTON_R1 presses.
Capture Data and Taking a Photo in the Same Application

To be able to capture bar code data and take a photo in the same application:

- Create a Datawedge profile pertaining to the picture taking Activity in your application that disables scanning and use standard Android SDK APIs to control the Camera.
- The default Datawedge profile takes care of the scanning in the application. You might want to create another DataWedge profile that caters to any specific scanning needs, associated to your Application’s Activity pertaining to scanning.

Disable DataWedge on MC67 and Mass Deploy

To disable DataWedge and deploy onto multiple MC67 devices:

1. Touch 🍀.
2. Touch DataWedge.
3. Press 📲.
4. Touch Settings.
5. Unselect the DataWedge enabled check box.
6. Export the DataWedge configuration. See Exporting a Configuration File on page 4-34 for instructions. See Configuration and Profile File Management on page 4-36 for instructions for using the auto import feature.

Soft Scan Feature

DataWedge allows a native Android application to programmatically start, stop, or toggle the scan trigger state. The application can issue an Android Broadcast Intent, to control the scanner, without requiring the scan button to be pressed. The active DataWedge profile is required to control all the parameters during a scan operation.

The structure of the broadcast intent that resolves to the soft scan is:

- **action**: "com.symbol.emdk.datawedge.api.ACTION_SOFTSCANTRIGGER"
- **extras**: This is a String name/value pair that contains trigger state details.
- **name**: "com.symbol.emdk.datawedge.api.EXTRA_PARAMETER"
- **value**: “START_SCANNING” or “STOP_SCANNING” or “TOGGLE_SCANNING”

Sample

Intent sendIntent = new Intent();
sendIntent.setAction("com.symbol.emdk.datawedge.api.ACTION_SOFTSCANTRIGGER");
sendIntent.putExtra("com.symbol.emdk.datawedge.api.EXTRA_PARAMETER", "TOGGLE_SCANNING");
sendBroadcast(sendIntent);
We provide a suite of utilities that allow an administrator to manage the following features:

- **Multi-user Login** - The Multi-user Login feature allows an administrator to set up the device to be used by multiple users. The users have access to specific applications and features depending upon the user settings.

- **Application Lock** - The Application Lock feature allows an administrator to restrict application access for specific applications by user or groups of users. The permitted applications are managed using groups of user accounts from Multi-user Login feature.

- **Secure Storage** - Secure Storage Administrator application allows installation and deletion of encrypted keys and creation, mounting, un-mounting and deletion of the encrypted file systems.

The following applications help the administrator configure these features.

- **On-device applications** - reside on the device.
  - MultiUser Administrator
  - AppLock Administrator
  - Secure Storage Administrator.

- **Host computer application** - reside on a host computer.
  - Enterprise Administrator.

**Required Software**

These tools are available on the Support Central web site at http://www.zebra.com/support. Download the required files from the Support Central web site and follow the installation instruction provided.

**On-device Application Installation**

See Application Installation on page 7-3 for instruction on installing applications onto the device.
Multi-user/AppLock Configuration

To use the Multi-user Login and Application Lock features, the administrator must create user and group account information using the Enterprise Administrator application.

NOTE The administrator can also create the account information manually. See Manual File Configuration on page 5-11 for more information.

Enterprise Administrator Application

NOTE .Net Compact Framework 4 or later is required to run the Enterprise Administrator. To download, go to www.microsoft.com.

Use the Enterprise Administrator application to setup user and group accounts and create the required (Password, Group and White List) files for using the Multi-user and Application Lock features.

On the host computer launch the Enterprise Administrator application.

Creating Users

Each person that uses the device has to have a user name and password. To create a user:

1. Click + above the Users list box.
2. In the **Username** text box, enter a user name. The text is case sensitive and required.
3. In the **Password** text box, enter a password for the user. The text is case sensitive and required.
4. In the **Retype Password** text box, re-enter the user password.
5. Select the **Admin** checkbox to set the user to have administrator rights.
6. Select the **Enabled** checkbox to enable the user.
7. Click **OK**.
8. Repeat steps 1 through 7 for each additional user.

**Adding Packages**

✓ **NOTE** All system applications that are on the default image are available to all users.

Create a list of installed applications (packages) on the device that are available for use by all the users.

1. Click + next to **Packages**.

✓ **NOTE** To get a list of all the applications (packages) on the device see *Determining Applications Installed on the Device on page 5-14.*
2. In the Package name text box, enter the name of an application.

3. Click OK.

4. Repeat steps 1 through 3 for each additional package.

Creating Groups

Create groups of users that have access to specific applications.

1. Click + above the Groups list. The Group Manager window appears with a list of users and packages.

   ![Image: Group Manager Window]

   **Figure 5-4  Group Manager Window**

2. In the Group name text box, enter a name for the group. This field is required.

3. Select a user in the Available Users list box and then click the Add button to add the user to the Users in Group list box or click the Add All button to add all the users in the Available Users list box to the Users in Group list box.

4. Select a package in the Available Packages list box and then click the Add button to add the package to the Packages in Group list box or click the Add All button to add all the packages in the Available Packages list box to the Packages in Group list box.

5. Click OK.

6. Click Save.

Creating Remote Authentication

Use the Remote Authentication feature to set a remote server for authentication.

1. Click the Auth button. The Authentication window appears.
2. Select the Remote radio button.
3. In the Server IP text box, enter the address of the remote server.
4. In the Port text box, enter the port number of the remote server.
5. Select the use SSL Encryption check box if SSL encryption is required.
6. Click OK.

Save Data

At any time, the administrator can save the current data. The application creates two files in the <user>\_APP_DATA folder: database and passwd.

Exporting File

In order to use the features on the device, export the required files and then copy them to the device. The following files are created by the Enterprise Administrator application:

- Password File - Filename: passwd. Lists the user names, encrypted passwords, administrator and enable flags.
- Group File - Filename: groups. Lists each group and users associated to each group.
- White List Files - Filename: the filenames are the names of the group created in the Group file. Lists the user installed applications that the group is allowed to access.
- Remote Server - Filename: server. Lists the remote server IP address and port number.

1. Click Export.
2. In the Browse For Folder window, select a folder and then click OK.
3. Click OK.
4. Click File > Export > Server Information.
   The server file is saved in the <user>\_APP_DATA folder.
5. Copy all the files to the root of the microSD card. See USB Communication for information on copying files to the device.
Copy all the files to the root of the On-device Storage. See Chapter 3, USB Communication for information on copying files to the device.

Importing User List
1. Click File > Import > User List.
2. Navigate to the location when the passwd file is stored.
3. Select the passwd file.
4. Click Open.
   The user information is populated into the Users list.

Importing Group List
1. Click File > Import > Group List.
2. Navigate to the location when the group file is stored.
3. Select the group file.
4. Click Open.
   The group and package information is populated into the Groups and Packages list.

Importing Package List
To import a package list (see Package List File on page 5-12 for instructions for creating a Package List file):
1. Click File > Import > Package List.
2. Navigate to the location when the package file is stored.
4. Click Open.
   The package information is populated into the Packages list.

Editing a User
1. Select a user in the Users list.
2. Click Edit User.
3. Make changes and then click OK.

Deleting a User
1. Select a user in the Users list.
2. Click -. The user name is removed from the list.
Editing a Group
1. Select a user in the Groups list.
2. Click Edit Group.
3. Make changes and then click OK.

Deleting a Group
1. Select a group in the Groups list.
2. Click -. 
3. Click Yes. The group name is removed from the list.

Editing a Package
1. Select a package in the Packages list.
2. Click Edit Package.
3. Make changes and then click OK.

Deleting a Package
1. Select a package in the Packages list.
2. Click -. The package name is removed from the list.

MultiUser Administrator
Use the MultiUser Administrator application to allow an administrator to enable, disable and configure the Multiuser Login feature.

Importing a Password
When the MultiUser Administrator is used for the first time, the password file must be imported.
1. Touch >
2. Touch **Load User List**. The application reads the data from the `passwd` file and configures the Multi-user Login feature.

3. Touch **Enable Multiuser** to enable the feature.

4. In the **Login** text box, enter the username.

5. In the **Password** text box, enter the password.

6. Touch **OK**.

**Disabling the Multi-user Feature**

> **NOTE** To disable the Multi-user Login feature, the user must have administrator rights. A message displays at the bottom of the screen notifying the user.

1. Touch **>**.

2. Touch **Disable MultiUser**.
   
   The Multi-user feature is disabled immediately.
Enabling Remote Authentication

**CAUTION** When Remote Authentication is enable, the device searches for the remote server during the login procedure. If the remote server is not available or the address is incorrect, the user would not be able to login and an Enterprise reset is required to access the device.

1. Touch >.
2. Touch Load Server Info. The application reads the data from the server file and configures the Multi-user Login feature.
3. Press.
   The device accesses the remote server and then Login screen appears.

Disabling Remote Authentication

**CAUTION** When Remote Authentication is enable, the device searches for the remote server during the login procedure. If the remote server is not available or the address is incorrect, the user would not be able to login and an Enterprise reset is required to access the device.

1. Touch >.
2. Press.
   The remote authentication feature is disabled immediately. The device suspends. When resumed, the login screen appears.

Enabling Data Separation

**NOTE** To enable Data Separation, the user must have administrator rights. A message displays at the bottom of the screen notifying the user.

Data Separation feature allows each user of the device to have separate isolated data area for installed application. To enable data separation:

1. Touch >.
2. Press.
3. Touch Enable Data Separation. The current user is logged out to prepare the data space for each user as they log in.

Disabling Data Separation

**NOTE** To disable Data Separation, the user must have administrator rights. A message displays at the bottom of the screen notifying the user.
1. Touch > .
2. Press .
3. Touch Disable Data Separation. The current user is logged out to restore the system to common data space for all users.

Delete User Data

✓ NOTE To delete user data, the user must have administrator rights. A message displays at the bottom of the screen notifying the user.

1. Touch > .
2. Press .
3. Touch Delete Individual User Data. A dialog box displays with all of the users that currently have data associated with their log in.
4. Select each user to delete or Select All to delete all user data.
5. Touch Delete to delete the data.

Capturing a Log File

1. Touch > .

To capture a log file, the user must have administrator rights. A message displays at the bottom of the screen notifying the user.

2. Touch Export Log to copy the log file to the microSD card. The log file can be captured when the multi-user feature is in either the enabled or disabled mode.

3. Touch Export Log to copy the log file to the On-device Storage. The log file can be captured when the multi-user feature is in either the enabled or disabled mode.

4. The log file and a backup log file are named multiuser.log and multiuser.log.bak, respectively.

---

**AppLock Administrator**

The Application Lock feature allows the system administrator to restrict application access for specific applications by user or groups of users. The permitted applications are managed using groups of user accounts from Multi-user feature.

The permitted application names are built into an application White List that is used to know which applications are managed by the system.

The Application Lock feature does not prevent execution of native code or plug-ins and it does not prevent applications from accessing public classes within non-permitted applications. The AppLock Administrator application takes advantage of the Application Lock feature allowing an administrator to enable, disable and install White Lists and Groups files.
NOTE To use the AppLock Administrator application, the user must have administrator rights. A message displays at the bottom of the screen notifying the user.

**Enabling Application Lock**

1. Touch 📱 > 🌐.
2. Touch Enable Application Lock.

**Disabling Application Lock**

1. Touch 📱 > 🌐.
2. Touch Disable Application Lock.

---

**Manual File Configuration**

**Groups File**

A Groups file is a text file that provides a list of groups and assigns users to each group. The text file contains one line for each group. Each line is formatted as follows:

<groupname>:<user1>,<user2>,...<userN>

where:

<groupname> = the name for a group. This is also the name of the White List file for this group. This field uses any alphanumeric character.

<user1> through <userN> = the name of the user assigned to this group. The user name is the same as that defined for the MultiUser feature. See MultiUser Administrator for more information.

NOTE If the same user is assigned to multiple groups, then that user’s White List will be a logical union of the White Lists for all of the groups that user is assigned.

A line starting with the # character is considered a comment and is ignored.

Examples:

- AdminGroup:alpha
  - The Group name is AdminGroup and assigns user alpha to the group.
- ManagersGroup:beta, gamma
  - The Group name is ManagerGroup and assigns users beta and gamma to the group.

**White List File**

A White List file is a text file that provides a list of allowed packages from that group. The text file contains one line for each allowed package for that user group. Each line is format as follows:

<package1name>
<packageNname>

where:

- `<package1Name>` = the package name allowed for this group. Wild cards are allowed for this field.

**Example:**

Refer to the example of the Groups file above. A White List file of the name AdminGroup could have the following lines:

```plaintext
com.companyname.application
com.symbol.*
```

where:

- `com.companyname.application` = the specific application with the package name
- `com.companyname.application` will be permitted for this group.
- `com.symbol.*` = any application that has a package name that starts with `com.symbol` will be permitted for this group.

![NOTE]
The wildcard ".*" is allowed and indicates that this group is permitted to run any package.

A default White List for use when the MultiUser feature is disabled takes the same form as above but in named default.

To assure that administrative users have access to all device functionality, the White List for the administrative users group should use the wildcard.

At a minimum, the White List for the administrative users group should contain `com.symbol.fusion` to allow administrative users the ability to configure Wi-Fi advanced settings.

**Package List File**

A Package List file is a text file that lists package names that can be imported into the Packages list. The file makes it easier to enter package name into the application. The text file contains one line for each package name.

**Example:**

```plaintext
com.zebra.example1
com.zebra.example2
com.zebra.example3
com.zebra.example4
```

**Groups File**

A Groups file is a text file that provides a list of groups and assigns users to each group.

The text file contains one line for each group. Each line is formatted as follows:
<groupname>:<user1>,<user2>,...<userN>

where:

<groupname> = the name for a group. This is also the name of the White List file for this group. This field uses any alphanumeric character.

<user1> through <userN> = the name of the user assigned to this group. The user name is the same as that defined for the MultiUser feature. See MultiUser Administrator for more information.

**NOTE** If the same user is assigned to multiple groups, then that user’s White List will be a logical union of the White Lists for all of the groups that user is assigned. A line starting with the # character is considered a comment and is ignored.

Examples:

- AdminGroup:alpha
  - The Group name is AdminGroup and assigns user alpha to the group.
  - ManagersGroup:beta, gamma
  - The Group name is ManagerGroup and assigns users beta and gamma to the group.

**White List File**

A White List file is a text file that provides a list of allowed packages from that group. The text file contains one line for each allowed package for that user group. Each line is format as follows:

<package1name>
.
.
.
<packageNname>

where:

- <package1Name> = the package name allowed for this group. Wild cards are allowed for this field.

**Example:**

Refer to the example of the Groups file above. A White List file of the name AdminGroup could have the following lines:

com.companyname.application
com.symbol.*

where:

- com.companyname.application = the specific application with the package name
- com.companyname.application will be permitted for this group.
- com.symbol.* = any application that has a package name that starts with
- com.symbol will be permitted for this group.
To assure that administrative users have access to all device functionality, the White List for the administrative users group should use the wildcard.

At a minimum, the White List for the administrative users group should contain `com.symbol.fusion` to allow administrative users the ability to configure Wi-Fi advanced settings.

**Determining Applications Installed on the Device**

To determine the names of applications installed on the device for use with the Enterprise Administrator application:

1. Connect the device to the host computer.

   **NOTE** See *Development Tools on page 7-2* for information on installing the USB driver for use with `adb`.

2. On the host computer, open a command prompt (or a terminal in Ubuntu) and run the following:
   
   ```
   adb devices. This returns the device id.
   adb shell
   $pm list packages -f > sdcard/pkglist.txt
   $exit
   ```

3. A `pkglist.txt` file is created in the root of the microSD card. The file lists all the .apk files installed with their package names.

**Package List File**

A Package List file is a text file that lists package names that can be imported into the Packages list. The file makes it easier to enter package name into the application. The text file contains one line for each package name.

Example:

```
com.symbol.example1
com.symbol.example2
com.symbol.example3
com.symbol.example4
```

---

**Secure Storage**

Secure Storage Administrator application allows:

- installation and deletion of encrypted keys
- creation, mounting, un-mounting and deletion of the encrypted file systems.
Installing a Key

1. Touch 📲 >  
2. Touch Install Key.
4. Touch OK.

5. In the Enter key text box, enter the key name followed by the key value obtained in step 1, using the following format:
   <Key Name> <Key value in Hex String>
   Example: key2 1234567890abcdef1234567890abcdef1234567890abcdef1234567890abcdef
   The key value must be a 64 hexadecimal character string.

6. Touch OK. The key is imported into the device. The message successfully installed the key appears on the screen.

Viewing Key List

1. Touch OK.

Deleting a Key

1. Touch Revoke Key.
2. Touch the key to deleted.
3. Touch OK.

NOTE If a key is deleted then all the volumes created using that key are un-mounted. The same key is required to re-mount the volume.
Volumes

Creates an encrypted file system (volume) on the device. The user must have Administrative privileges to create a volume.

Creating Volume Using EFS File

1. Create an efs file. See Creating an EFS File on page 5-17 for instruction on creating the efs file.
2. Copy the keyfile and efsfile files to root of the microSD card. See Chapter 3, USB Communication.
3. Touch Create Volume.
4. Touch Import.
5. Touch OK. The message Successfully Created the Volume appears briefly.

Creating a Volume Manually

1. Touch Create Volume.
3. Touch OK.
4. In the Enter Parameters To Create Volume text box, enter the parameters in the follow format:
   <Volume Name> <Volume Storage Type> Key Name> <Mount Path> <Auto Mount> <Volume size>
   where:
   • <Volume Name> = name of the volume.
   • <Volume Storage Type> = storage location. Options: internal or sdcrad.
   • <Key Name> = name of the key to use when creating the volume.
   • <Mount Path> = path where the volume will be located.
   • <Auto Mount> = Options: 1 = yes, 0 = no.
   • <Volume size> = size of the volume in Megabytes.

Mounting a Volume

1. Touch Mount Volume.
2. Touch sdcard or internal.
3. Touch OK.
4. Select a volume.
5. Touch OK.

Listing Volumes
1. Touch Volume List.
2. Touch sdcard to list volumes on the microSD card or internal to list volumes on internal storage.
3. Touch sdcard to list volumes on the On-device Storage or internal to list volumes on internal storage.
4. Touch OK. The List of EFS Volumes dialog box appears with all the volumes of the selected storage location.
5. Touch OK.

Unmounting a Volume
1. Touch Unmount Volume.
2. Touch sdcard to list the mounted volumes on the microSD card or internal to list the mounted volumes on internal storage.
3. Touch OK.
4. Select the volume to un-mount.
5. Touch OK.

Deleting a Volume
1. If the encrypted volume is mounted, unmount it.
2. Touch Delete Volume.
3. Touch sdcard to list the unmounted volumes on the microSD card or internal to list the unmounted volumes on internal storage.
4. Select the volume to delete.
5. Touch OK.

Encrypting an SD Card

⚠️ CAUTION All data will be erased from the microSD card when this is performed.

1. Touch Encrypt SD card. A warning message appears.
2. Touch Yes. The Key List dialog box appears.
3. Select a key from the list and then touch Ok.
   The encryption process begins and when completed, displays a successfully completed message.

Creating an EFS File

When creating an encrypted volume, the parameter information can be imported from a file instead of entering manually.
1. On a host computer, create a text file.

2. In the text file enter the following:

   `<Volume Name> <Volume Storage Type> <Key Name> <Mount Path> <Auto Mount> <Volume size>
   
   where:
   
   `<Volume Name>` = name of the volume
   
   `<Volume Storage Type>` = storage location. Options: internal or sdcard.
   
   `<Key Name>` = name of the key to use when creating the volume.
   
   `<Mount Path>` = path where the volume will be located.
   
   `<Auto Mount>` = Options: 1 = yes, 0 = no.
   
   `<Volume size>` = size of the volume in Megabytes.

   Example:
   
   MyVolume sdcard key1 /mnt/sdcard/efsfolder 1 1

3. Save the text file as `efsfile`.

**Off-line Extraction Tool**

The Secure Storage feature allows for the usage of an encrypted file system. The off-line extraction tool allows encrypted file systems to be used on an Ubuntu version number 10.04LTS desktop. The off-line extraction tool is a shell script used to create, mount and unmount an encrypted file system used with the Secure Storage feature.

Connect the device to the host computer.

**Usage**

On a Ubuntu desktop, at a terminal prompt, type: `offline_extraction.sh`.

The following Main Menu appears:

[ Offline-extraction tool ]
1) Create an image
2) Mount an existing EFS image
3) Unmount final mount location, device mapper and loop device
4) Quit

Please, choose one from the list and press ENTER:

**Usage**

On a Ubuntu desktop, at a terminal prompt, type: `offline_extraction.sh`.

The following Main Menu appears:

[ Offline-extraction tool ]
1) Create an image
2) Mount an existing EFS image
3) Unmount final mount location, device mapper and loop device
4) Quit

Please, choose one from the list and press ENTER:
Creating an Image

1. From the Main Menu, select item 1. The following appears:

   Please enter EFS file name (e.g. /tmp/1.efsmot): <volume name>
   Please enter encryption key (64-bytes hex value):
   Please enter the EFS image size (in MB): <volume size in MB>
   Please enter EFS image filesystem type (e.g. ext4, vfat...): ext4

   DONE - OK

2. The utility first prompts for the name of the volume to create. Any ASCII string that meets standard Linux file naming rules is valid. Enter the image name and then press Enter.

3. The utility then prompts for the encryption key. This is a 64 byte hexadecimal value. Enter a string of 64 hexadecimal digits and then press Enter.

4. The utility then prompts for the image size. Enter the size of the volume in MB. A number must be entered without the units. It is understood that MB. A value of 2000, is 2 GB. Note that 4 GB is the largest volume that is supported on the device.

5. The utility lastly prompts for the filesystem type. Enter ext4 and then press Enter. The utility then creates the volume in the current working directory. The utility then finishes the creation process and then prompts to whether the volume should be mounted. Press [1] if you want to mount or press [2] if you want to exit

6. Press 1 will prompt for the mount point. For example, /mnt is prompted. Press Enter to mount the encrypted volume at the selected point. After mounting, an option to return to the Main Menu or Exit is provided. Press 2 to exit the utility without mounting.

7. If the volume is mounted on the desktop, then that volume can be provisioned with files for deployment.

8. Unmounted volumes can then be copied to the device and subsequently mounted using the Secure Storage Administrator by providing the encryption key used.

Mounting an Image

1. From the Main Menu, select item 2. The following appears:

   Please enter EFS file name (e.g. /tmp/1.efsmot): <volume name>
   Please enter encryption key (64-bytes hex value):
   Please enter mount path (e.g. /mnt): <existing mount point>

   DONE - OK

2. Enter the name of the volume and then press Enter.

3. The utility then prompts for the encryption key. This is a 64 byte hexadecimal value. Enter a string of 64 hexadecimal digits and then press Enter.

4. Enter the mount point where to connect the volume into the file system and then press Enter. The example of /mnt is provided.
Unmounting an Image

1. From the Main Menu, select item 3. The following appears:
   Please enter EFS file name (e.g. /tmp/1.efsmot): <volume name>
   
   DONE - OK

2. Enter the name of the volume to unmount.

3. Press Enter.
This chapter describes settings available for configuring the device.

### Location Settings

Use the **Location** settings to set preferences for using and sharing location information. Touch 🌋 > 🌍 or 🌍 > 🌋 Location.

![Location Screen](image)

**Figure 6-1 Location Screen**

- **Location** - Slide to enable locationing (KitKat only).
- **Mode**: (KitKat only)
  - **High accuracy** - Use GPS, Wi-Fi and mobile networks to determine location (default).
  - **Battery saving** - Use Wi-Fi and mobile network to determine location.
  - **Device only** - Use GPS to determine location.
- **GPS satellites** - Check to allow application to use the MC67 to pinpoint location (Jelly Bean only).
- **Use Assisted GPS** - Touch to enable or disable Assisted GPS.
- **SUPL settings** - Touch to configure a Secure User Plane Location (SUPL) server.
Figure 6-2  SUPL Settings

- **Using Default Server** - Check to use the default SUPL server.
- **Server FQN/IP** - Enter the address for a SUPL server when not using the default server.
- **Port** - Enter the port address for the SUPL server.
- **Secure connection** - Check to set the server for a secure connection.
- **User ID type** - Select which ID type to use during the SUPL session.

### Screen Unlock Settings

Use the **Security settings** to set preferences for locking the screen. Touch 🕒 > ♂️ or ♂️ > 🗝️ Security.

**NOTE** Options vary depending upon the application’s policy, for example, email.

- **Screen lock** - Touch to configure the device to require a slide, pattern, PIN, or password to unlock the screen.
  - **None** - Disable screen unlock security.
  - **Slide** - Slide the lock icon to unlock the screen.
  - **Pattern** - Draw a pattern to unlock screen. See *Set Screen Unlock Using Pattern on page 6-4* for more information.
  - **PIN** - Enter a numeric PIN to unlock screen. See *Set Screen Unlock Using PIN on page 6-3* for more information.
  - **Password** - Enter a password to unlock screen. See *Set Screen Unlock Using Password on page 6-3* for more information.

Lock the screen to protect access to data on the device. Some email accounts require locking the screen. The Locking feature functions differently in Single-user versus Multiple-user mode.

### Single User Mode

When locked, a slide, pattern, PIN or password is required to unlock the device. Press the Power button to lock the screen. The device also locks after a pre-defined time-out.

Press and release the Power button to wake the device. The Lock screen displays.
Slide up to unlock the screen. If the Pattern screen unlock feature is enabled, the Pattern screen appears instead of the Lock screen.

If the PIN or Password screen unlock feature is enabled, enter the PIN or password after unlocking the screen.

**Set Screen Unlock Using PIN**

1. Touch 🕒.
2. Touch ⏰ or 📦.
4. Touch Screen lock.
5. Touch PIN.
6. Touch in the text field.
7. Enter a PIN (between 4 and 16 characters) then touch Next.
8. Re-enter PIN and then touch Next.
9. Touch 🛠. The next time the device goes into suspend mode a PIN is required upon waking.

![PIN Screen](image)

**Set Screen Unlock Using Password**

1. Touch 🕒.
2. Touch ⏰ or 📦.
4. Touch Screen lock.
5. Touch Password.
6. Touch in the text field.
7. Enter a password (between 4 and 16 characters) then touch Next.
8. Re-enter the password and then touch Next.
9. Touch  The next time the device goes into suspend mode a PIN is required upon waking.

![Password Screen](image)

**Figure 6-4 Password Screen**

**Set Screen Unlock Using Pattern**

1. Touch  
2. Touch  or  
4. Touch Screen lock. 
5. Touch Pattern.
6. Watch pattern example and then touch Next. 
7. Draw a pattern connecting at least four dots.
8. Touch Continue.
9. Re-draw the pattern. 
10. Touch Confirm.
11. On the Security screen, touch Make pattern visible to show pattern when you draw the pattern.
12. Touch Vibrate on touch to enable vibration when drawing the pattern.
13. Touch .  

The next time the device goes into suspend mode a Pattern is required upon waking.
Multiple User Mode

For Multi-user Mode configuration, see Chapter 5, Administrator Utilities.

Passwords

To set the device to briefly show password characters as the user types, set this option. Touch > or > Security. Touch Make passwords visible. A check in the checkbox indicates that the option is enabled.

Button Remapping

The MC67’s buttons can be programmed to perform different functions or shortcuts to installed applications.

• Trigger 1 - Left Scan/Action button
• Trigger 2 - Right Scan/Action button
• Trigger 3 - Volume up button
• Trigger 4 - Volume down button
• Trigger 5 - Action button

Remapping a Button

1. Touch > or .
2. Touch Key Programmer.
3. Select the button to remap.

4. Touch the **BUTTON REMAPPING** tab or the **SHORTCUT** tab that lists the available functions and applications.

5. Touch a function or application shortcut to map to the button.

   ✔️ **NOTE** If you select an application shortcut, the application icon appears next to the button on the **Key Programmer** screen.

6. Touch 🏠.

**Exporting a Configuration File**

   ✔️ **NOTE** Available on Jelly Bean configurations only.

The Button Remapping configuration can be exported to an xml file and imported into other MC67 devices.

1. Touch 🚪 > 📄.

2. Touch 🗝 Key Programmer.

3. Touch 📋.
4. Touch Export.
   The configuration file (key-config.xml) is saved in the folder: /enterprise/usr/.

5. Copy the xml file from the folder to a host computer. See Chapter 3, USB Communication for more information.

Importing a Configuration File

✓ NOTE Available on Jelly Bean configurations only.

The Button Remapping configuration can be imported from an xml file.

1. Copy the configuration file (key-config.xml) from a host computer to the root of the microSD card. See Chapter 3, USB Communication for more information.

2. On the MC67, use File Browser to move the file from the root of the microSD card to the /enterprise/usr folder.

3. Touch 📱 > 🕒.

4. Touch 🕒 Key Programmer.

5. Touch Import.

Creating a Remap File

✓ NOTE Available on Jelly Bean configurations only.

The administrator can create an xml configuration file and import it into any MC67 device. Use any text editor to create the xml file with the filename: key-config.xml.

<?xml version="1.0" encoding="UTF-8"?>
<Button_Remap>
   <trigger_1 mode="Remap Button">
      <REMAP_CODE>BUTTON_L1</REMAP_CODE>
      <EXTRA_SHORTCUT>MPA3_TRIGGER_1</EXTRA_SHORTCUT>
      <EXTRA_TITLE/>
      <EXTRA_PACKAGE_NAME/>
   </trigger_1>
   <trigger_2 mode="Remap Button">
      <REMAP_CODE>BUTTON_R1</REMAP_CODE>
      <EXTRA_SHORTCUT>MPA3_TRIGGER_2</EXTRA_SHORTCUT>
      <EXTRA_TITLE/>
      <EXTRA_PACKAGE_NAME/>
   </trigger_2>
   <trigger_3 mode="Remap Button">
      <REMAP_CODE>VOLUME_UP</REMAP_CODE>
   </trigger_3>
</Button_Remap>
<EXTRA_SHORTCUT>MPA3_TRIGGER_3</EXTRA_SHORTCUT>
<EXTRA_TITLE/>
<EXTRA_PACKAGE_NAME/>
</trigger_3>
<trigger_4 mode="Remap Button">
  <REMAP_CODE>VOLUME_DOWN</REMAP_CODE>
  <EXTRA_SHORTCUT>MPA3_TRIGGER_4</EXTRA_SHORTCUT>
</trigger_4>
<trigger_5 mode="Shortcut">
  <REMAP_CODE>BUTTON_R2</REMAP_CODE>
  <EXTRA_SHORTCUT>MPA3_TRIGGER_5</EXTRA_SHORTCUT>
</trigger_5>
<search_key mode="Remap Button">
  <REMAP_CODE>NONE</REMAP_CODE>
  <EXTRA_SHORTCUT>SEARCH_KEY</EXTRA_SHORTCUT>
</search_key>
<headset mode="Remap Button">
  <REMAP_CODE>NONE</REMAP_CODE>
</headset>
</Button_Remap>

Replace the options for each trigger. See Appendix B, Keypad Remap Strings for a list of available button functions.

Enterprise Reset

**NOTE** Available on Jelly Bean configurations only.

To ensure that the configuration persists after an Enterprise Reset:

1. Export the settings before an Enterprise Reset and then import the settings after an Enterprise Reset or
2. Push the configuration file using a MSP or a third-party MDM to the /enterprise/device/settings/keypad/ folder before the Enterprise Reset. After the Enterprise Reset the key configuration will be automatically applied from this file.

Two ways to persist the settings:
1. Export the settings before Enterprise Reset, and Import the same after Enterprise Reset.

2. Copy the `key-config.xml` file to folder `/enterprise/device/settings/keypad/` before the Enterprise Reset. After the Enterprise Reset the key configuration will be automatically applied from this file.

## Accounts

Use the **Accounts** to add, remove, and manage accounts. Use these settings to control how applications send, receive, and sync data on their own schedules, and whether applications can synchronize user data automatically.

Applications may also have their own settings to control how they synchronize data; see the documentation for those applications for details.

## Language Usage

Use the **Language & input** settings to change the language that display for the text and including words added to its dictionary.

### Changing the Language Setting

1. Touch **Language**.
2. In the **Language** screen, select a language from the list of available languages.
   
   The operating system text changes to the selected language.

### Adding Words to the Dictionary

1. In the **Language & input** screen, touch **Personal dictionary**.
2. Touch `+` to add a new word or phrase to the dictionary.
3. In the **Phrase** text box, enter the word or phrase.
4. In the **Shortcut** text box, enter a shortcut for the word or phrase.
5. In the **Language** drop-down list, select the language that this word or phase is stored.
6. Touch **Add to dictionary** in the top left corner of the screen to add the new word.

## Keyboard Settings

Use the **Language & input** settings for configuring the on-screen keyboards. The device contains the following keyboard settings:

- Android Keyboard
- Chinese keyboard.
About Device

Use About phone settings to view information about the MC67. Touch ☰ >  or ☰ > About device.

- **MX** - Displays the OSX and MXMF versions (Kitkat only).
- **Status** - Touch to display the following:
  - **Battery status** - Indicates if the battery is charging (on AC power) or discharging (on battery power).
  - **Battery level** - Indicates the battery charge level.
  - **Network** - Indicates the current network carrier.
  - **Signal strength** - Indicates the radio signal strength.
  - **Mobile network type** - Indicates the mobile network type.
  - **Service state** - Indicates the state of service.
  - **Roaming** - Indicates if the device is roaming outside the network.
  - **Mobile network state** - Indicates the mobile network state.
  - **My phone number** - Displays the phone number associated with the device.
  - **IMEI** - Displays the IMEI number for the device.
  - **IMEI SV** - Displays the IMEI SV number for the device.
  - **IP address** - Displays the IP address of the device.
  - **Wi-Fi MAC address** - Displays the Wi-Fi radio MAC address.
  - **Ethernet address** - Displays the Ethernet driver MAC address.
  - **Bluetooth address** - Displays the Bluetooth radio Bluetooth address.
  - **Serial number** - Displays the serial number of the device.
  - **Up time** - Displays the time that the MC67 has been running since being turned on.
- **Battery information** - Displays information about the battery.
- **Hardware config** - Lists part number for various hardware on the MC67.
- **Legal information** - Opens a screen to view legal information about the software included on the MC67.
- **Model number** - Displays the device model number.
- **EA Version** - Displays the EA firmware version.
- **SSPAM** - Displays SSPAM firmware version.
- **Serial number** - Displays the device serial number.
- **Build Tag** - Displays the build name.
- **Android version** - Displays the operating system version.
- **Android security patch level** - Displays the security patch level (KitKat only).
- **Baseband version** - Displays WAN radio firmware version.
- **Kernel version** - Displays the kernel version.
- **Build number** - Displays the software build number.
CHAPTER 7 APPLICATION DEPLOYMENT

This chapter describes features in Android including new security features, how to package applications, and procedures for deploying applications onto the device.

Security

The device implements a set of security policies that determine whether an application is allowed to run and, if allowed, with what level of trust. To develop an application, you must know the security configuration of the device, and how to sign an application with the appropriate certificate to allow the application to run (and to run with the needed level of trust).

NOTE Ensure the date is set correctly before installing certificates or when accessing secure web sites.

Secure Certificates

If the VPN or Wi-Fi networks rely on secure certificates, obtain the certificates and store them in the device’s secure credential storage, before configuring access to the VPN or Wi-Fi networks.

If downloading the certificates from a web site, set a password for the credential storage. The device supports X.509 certificates saved in PKCS#12 key store files with a .p12 extension (if key store has a .pfx or other extension, change to .p12).

The device also installs any accompanying private key or certificate authority certificates contained in the key store.

Installing a Secure Certificate

1. Copy the certificate from the host computer to the root of the microSD card. See Chapter 3, USB Communication for information about connecting the device to a host computer and copying files.

2. Touch  >  or .

4. Touch Install from SD card.
5. Navigate to the location of the certificate file.

6. Touch the filename of the certificate to install. Only the names of certificates not already installed display.

7. If prompted, enter the certificate’s password and touch **OK**.

8. Enter a name for the certificate and touch **OK**. If a password has not been set for the credential storage, enter a password for it twice and then touch **OK**.

The certificate can now be used when connecting to a secure network. For security, the certificate is deleted from the microSD card.

### Configuring Credential Storage Settings

1. Touch 📦 > 🞂 or 🚪.

   - **Trusted credentials** - Touch to display the trusted system and user credentials.
   - **Install from SD card** - Touch to install a secure certificate from the microSD card.
   - **Clear credentials** - Deletes all secure certificates and related credentials.

### Development Tools

To start developing applications for the device, download the development SDK and the Eclipse IDE. Development can take place on a Microsoft® Windows®, Mac® OS X®, or Linux® operating system.

Applications are written in the Java language, but compiled and executed in the Dalvik VM (a non-Java virtual machine). Once the Java code is compiled cleanly, the developer tools make sure the application is packaged properly, including the AndroidManifest.xml file.

The development SDK is distributed as a ZIP file that unpacks to a directory on the host computer hard drive. The SDK includes:

- android.jar
  - Java archive file containing all of the development SDK classes necessary to build an application.
- documentation.html and docs directory
  - The SDK documentation is provided locally and on the Web. It's largely in the form of JavaDocs, making it easy to navigate the many packages in the SDK. The documentation also includes a high-level Development Guide and links to the broader community.
- Samples directory
  - The samples subdirectory contains full source code for a variety of applications, including ApiDemo, which exercises many APIs. The sample application is a great place to explore when starting application development.
- Tools directory
  - Contains all of the command-line tools to build applications. The most commonly employed and useful tool is the adb utility.
• usb_driver

• Directory containing the necessary drivers to connect the development environment to an enabled device. These files are only required for developers using the Windows platform.

Open the Developer options screen to set development related settings.

On the Home screen, touch > or > Developer options. Slide the switch to the ON position to enable developer options.

ADB USB Setup

To use the ADB, install the USB driver. This assumes that the development SDK has been installed on the host computer. Go to http://developer.android.com/sdk/index.html for details on setting up the development SDK.

ADB driver for Windows and Linux are available on the Zebra web site. Download the ADB and USB Driver Setup package. Following the instructions with the package to install the ADB and USB drivers for Windows and Linux.

Application Installation

After an application is developed, install the application onto the device using one of the following methods:

• USB connection, see Installing Applications Using the USB Connection on page 7-3.

• Android Debug Bridge, see Installing Applications Using the Android Debug Bridge on page 7-5.

• microSD Card, see Installing Applications Using a microSD Card on page 7-4

• Mobile device management (MDM) platforms that have application provisioning. Refer to the MDM software documentation for details.

Installing Applications Using the USB Connection

CAUTION When connecting the device to a host computer and mounting its microSD card, follow the host computer’s instructions for connecting and disconnecting USB devices, to avoid damaging or corrupting files.

1. Connect the device to a host computer using USB. See Chapter 3, USB Communication.

2. On the host computer, copy the application .apk file from the host computer to the device.

3. Disconnect the device from the host computer. See Chapter 3, USB Communication.

4. On the device, touch > or .

NOTE In File Browser, the microSD card path is/sdcard or /storage/sdcard1 and Internal storage path is /storage/sdcard0.

5. Touch to view files on the microSD card.

7. Touch the application file to begin the installation process.
8. To confirm installation and accept what the application affects, touch **Install** otherwise touch **Cancel**.

![Accept Installation Screen](image)

**Figure 7-1  Accept Installation Screen**

9. Touch **Open** to open the application or **Close** to exit the installation process. The application appears in the App list.

## Installing Applications Using a microSD Card

*WARNING* When connecting the device to a host computer and mounting its microSD card, follow the host computer’s instructions for connecting and disconnecting USB devices, to avoid damaging or corrupting files.

1. Connect the device to a host computer using USB. See *Chapter 3, USB Communication*.
2. Copy the application `.apk` file from the host computer to the microSD card.
3. Remove the microSD card from the host computer.
4. Press and hold the Power button until the menu appears.
5. Touch **Power off**.
6. If hand strap is attached, slide the hand strap clip up toward the top of the device and then lift.
7. Press the two battery latches in.
8. Lift the battery from the device.
9. Lift the access door.
10. Insert the microSD card.
11. Replace the access door.
12. Insert the battery, bottom first, into the battery compartment in the back of the device.
13. Press the battery down until the battery release latch snaps into place.
14. Replace the hand strap, if required.
15. Press and hold the Power button to turn on the device.
16. Touch 🌞.
17. Touch \(\text{File Browser}\) to view files on the microSD card.

18. Locate the application .\(\text{apk}\) file.

19. Touch the application file to begin the installation process.

20. To confirm installation and accept what the application affects, touch \textbf{Install} otherwise touch \textbf{Cancel}.

21. Touch \textbf{Open} to open the application or \textbf{Close} to exit the installation process. The application appears in the App list.

**Installing Applications Using the Android Debug Bridge**

Use ADB commands to install application onto the device.

\[\text{CAUTION}\] When connecting the device to a host computer and mounting its microSD card, follow the host computer's instructions for connecting and disconnecting USB devices, to avoid damaging or corrupting files.

Ensure that the ADB drivers are installed on the host computer. See \textit{ADB USB Setup on page 7-3}.

1. Connect the device to a host computer using USB. See \textit{Chapter 3, USB Communication}.

2. Touch \(\text{Developer options}\).

3. Slide the switch to the \textbf{ON} position.

5. Touch \textbf{OK}.

6. On the host computer, open a command prompt window and use the adb command:
   \(\text{adb install } <\text{application}>\)
   where: \(<\text{application}>\) = the path and filename of the \(\text{apk}\) file.

7. Disconnect the device from the host computer. See \textit{Chapter 3, USB Communication}.

**Uninstalling an Application**

1. Touch \(\text{Developer options}\).

2. Touch \(\text{Apps}\).

3. Swipe left or right until the \textbf{Downloaded} screen displays.
4. Touch the application to uninstall.
5. Touch Uninstall.
6. Touch OK to confirm.

---

**Figure 7-2  Downloaded Screen**

---

**Updating the System**

System Update packages can contain either partial or complete updates for the operating system. Zebra distributes the System Update packages on the Support Central web site.

1. Download the system update package:
3. Download the appropriate System Update package to a host computer.

**CAUTION** Make sure that the MC67 is connected to AC power and that AC power is not removed during a system update or firmware update.

4. Copy the System Update zip file to the root directory of the microSD card. See Chapter 3, USB Communication for more information.
5. Press and hold the Power button until the menu appears.
6. Touch Reset.
7. Press and hold the Right Scan/Action button.
8. When the System Recovery screen appears, release the button.
10. Press the Volume Up and Volume Down buttons to navigate to the apply update from /sdcard option.
11. Press the Right Action button.
12. Press the Volume Up and Volume Down buttons to navigate to the System Update zip file.
13. Press the Right Action button. The System Update installs and then the MC67 resets.
Storage

The device contains four types of file storage:

- Random Access Memory (RAM)
- External storage (microSD card)
- Internal storage
- Enterprise folder.

Random Access Memory

Executing programs use RAM to store data. Data stored in RAM is lost upon a reset.

The operating system manages how applications use RAM. It only allows applications and component processes and services to use RAM when required. It may cache recently used processes in RAM, so they restart more quickly when opened again, but it will erase the cache if it needs the RAM for new activities.

To view the amount of free and used memory, touch Apps > or Apps > Apps. Swipe the screen until the Running screen appears.

![Running Screen](image)

Figure 7-3  Running Screen

The bar at the bottom of the screen displays the amount of used and free RAM.

External Storage

The MC67 can have a removable microSD card. The microSD card content can be viewed and files copied to and from when the MC67 is connected to a host computer. Some applications are designed to be stored on the microSD card rather than in internal memory.

To view the used and available space on the microSD card, touch Storage.
Figure 7-4  Storage Settings

- **Total space** - Displays the total amount of space on the installed microSD card.
- **Apps** - Displays the available space used for applications and media content on the installed microSD card.
- **Pictures, videos** - Displays the available space used for pictures and videos on the installed microSD card.
- **Available** - Displays the available space on the installed microSD card.
- **Unmount SD card** - Unmounts the installed microSD card from the MC67 so that it can be safely removed. This setting is dimmed if there is no microSD card installed, if it has already been unmounted or if it has been mounted on a host computer.
- **Erase external SD card** - Permanently erases everything on the installed microSD card.

**Internal Storage**

The MC67 has internal storage. The internal storage content can be viewed and files copied to and from when the MC67 is connected to a host computer. Some applications are designed to be stored on the internal storage rather than in internal memory.

To view the used and available space on the internal storage, touch 📷 > 📁 or 📀 > 📁 Storage.

- **Internal Storage**
- **Total space** - Displays the total amount of space on internal storage (approximately 1.0 GB).
- **Apps** - Displays the available space used for applications and media content on internal storage.
- **Available** - Displays the available space on internal storage.
Enterprise Folder

The Enterprise folder (within internal flash) is a super-persistent storage that is persistent after a reset and an Enterprise Reset. The Enterprise folder is erased during a Factory Reset. The Enterprise folder is used for deployment and device-unique data. The Enterprise folder is approximately 128 MB (formatted). Applications can persist data after an Enterprise Reset by saving data to the enterprise/user folder. The folder is ext4 formatted and is only accessible from a host computer using ADB or from an MDM.

Application Management

Applications use two kinds of memory: storage memory and RAM. Applications use storage memory for themselves and any files, settings, and other data they use. They also use RAM when they are running.

From the Home screen touch \(\text{Menu} \rightarrow \text{Manage apps.}\)

![Manage Applications Screen](image)

Figure 7-5 \textit{Manage Applications Screen}

The Manage Applications screen has four tabs, with lists of applications and their components in each. At the bottom of each tab is a graph of the memory used by the items in the list and amount of free memory.

Touch an application, process, or service in a list to open a screen with details about it and, depending on the item, to change its settings, stop it or uninstall it.

- Slide the screen to the \textit{Downloaded} tab to view the applications downloaded to the device.
- Slide the screen to the \textit{All} tab to view all the applications installed on the device, including factory installed applications and downloaded applications.
- Slide the screen to the \textit{On SD card} tab to view the applications installed on the microSD card. A check mark indicates that the application is installed on the microSD card. Unchecked items are installed in internal storage and can be moved to the microSD card.
- Touch the \textit{Running} tab to view the applications and their processes and services that are running or cached

When on the \textit{Downloaded}, \textit{All}, or \textit{On SD card} tab, touch \(\text{Menu} \rightarrow \text{Sort by size}\) to switch the order of the list.

Viewing Application Details

Applications have different kinds of information and controls, but commonly include:

- Touch \textit{Force stop} to stop an application.
• Touch **Uninstall** to remove the application and all of its data and settings from the device. See *Uninstalling an Application on page 7-5* for information about uninstalling applications.

• Touch **Clear data** to delete an application’s settings and associated data.

• Touch **Move to USB storage** or **Move to SD card** to change where some applications are stored.

• Cache If the application stores data in a temporary area, lists how much information is stored, and includes a button for clearing it.

• **Launch by default** clears if you have configured an application to launch certain file types by default, you can clear that setting here.

• **Permissions** lists the areas on the device that the application has access to.

1. Touch ✏️ > **Manage apps**.

2. Touch an application, process, or service.

   The **App Info** screen lists the application name and version number, and details about the application. Depending on the application and where it came from, it may also include buttons for managing the application’s data, forcing the application to stop, and uninstalling the application. It also lists details about the kinds of information about your phone and data that the application has access to.

### Stopping an Application

To monitor how much RAM running applications and cached processes are using and if necessary, stop them.

1. Touch ✏️ > **Manage apps**.

2. Swipe the screen to display the **Running** tab.

3. Touch **Show cached processes** or **Show running services** to switch back and forth. The **Running** tab lists the applications, processes, and services that are currently running or that have cached processes and how much RAM they are using.

4. The graph at the bottom of the screen displays the total RAM in use and the amount free. Touch an application, process, or service.

   ![Figure 7-6 Running Applications](image)

   **NOTE** Stopping an application or operating system processes and services disables one or more dependant functions on the device. The device may need to be reset to restore full functionality.

5. Touch **Stop**.
Changing Application Location

Some applications are designed to be stored on a microSD card, rather than in internal storage. Others are designed so you can change where they are stored. You may find it helpful to move large applications off of your internal storage, to make more room for other applications that don’t offer the option. Many large applications are designed this way for exactly this reason.

1. Touch 📲 > Manage apps.
2. Swipe the screen to display the On SD card tab.
   - The tab lists the applications that must be or can be stored on the microSD card. Each application lists the amount of storage it uses on internal storage (even when not stored there, all applications use at least a small amount of internal storage).
   - Applications that are stored on the microSD card are checked.
   - The graph at the bottom shows the amount of memory used and free of the microSD card: the total includes files and other data, not just the applications in the list.
3. Touch an application in the list.
   - The Storage section of the application’s details screen shows details about the memory used by the application. If the application can be moved, the Move button is active.
4. Touch Move to SD card to move the bulk of the application from the device’s internal storage to the microSD card.
5. Touch Move to phone to move the application back to the device’s internal storage.

Managing Downloads

Files and applications downloaded using the Browser or Email are stored on the microSD card in the Download directory. Use the Downloads application to view, open, or delete downloaded items.

1. Touch 📜.
2. Touch 🕒.
3. Touch an item to open it.
4. Touch headings for earlier downloads to view them.
5. Check items to delete; then touch 🗑️. The item is deleted from storage.
6. Touch Sort by size or Sort by time to switch back and forth.
   - When an application is opened, the other applications being used do not stop. The operating system and applications work together to ensure that applications not being used do not consume resources unnecessarily, stopping and starting them as needed. For this reason, there’s no need to stop applications unless it is not functioning properly.

RxLogger

RxLogger is a comprehensive diagnostic tool that provides application and system metrics. It allows for custom plug-ins to be created and work seamlessly with this tool. RxLogger is used to diagnose device and application issues. Its information tracking includes the following: CPU load, memory load, memory snapshots, battery
consumption, power states, wireless logging, cellular logging, TCP dumps, Bluetooth logging, GPS logging, logcat, FTP push/pull, ANR dumps, etc. All logs and files generated are saved onto flash storage on the device (internal or external).

RxLogger Configuration

RxLogger is built with an extensible plug-in architecture and comes packaged with a number of plugins already built-in. The included plug-ins are described below. Touch Settings to open the configuration screen.

Main Log Plug-in

The Main log presents a high level timeline view of the device health in an easy to read comma-separated values (CSV) format. The log contains many of the key parameters of various subsystems and is meant to be used as a first level triage that can potentially point to a range of specific detailed logs to look at. The two rightmost columns in the CSV file allow the log modules and plug-ins to insert asynchronous event based messages into the log. This is useful so that by looking at the CSV log you can see when snapshots have been created or when the tool has detected an application to be unresponsive. It is also used to show power events such as AC/DC power transitions.

- **Log Interval** - Specifies the interval, in milliseconds, to poll the collected parameters and write the data to the CSV log file.
- **Log path** - Specifies the base log path to store the CSV log file. The default to use the default external storage directory which is queried from the Android system.
• **Log base filename** - The base filename to use for the CSV file before appending the index number of that particular log file. For example, if the base filename is `Resource` and we are rotating through two log files, the actual filename will be: `Resource0.csv` and `Resource1.csv`.

• **Log file count** - Specifies the number of files to rotate through. Each file is constrained by the Log max size option.

• **Log max size** - Specifies the maximum size, in kilobytes, of each log file for the main CSV log.

• **Power** - Enables logging of power related parameters and events. These include battery stats (capacity, current, voltage, etc) and AC/DC power notification events.

• **System resources** - Enables logging of CPU and memory related items (Avg/current CPU load, program memory, storage memory, process count, etc).

• **Wifi** - Enables logging of wireless LAN items (WLAN power, signal strength, essid, connected AP, etc).

• **Cellular** - Enables logging of wireless WAN items (WAN power, network type, signal strength, connected cell tower, etc).

• **Network** - Enables logging of network items (IP address, default gateway, etc).

• **Bluetooth** - Enables logging of Bluetooth items (Bluetooth power, discoverable, connected, etc).

• **GPS** - Enables logging of GPS data (position, speed, etc).

• **GPS update frequency** - Specifies the frequency of GPS updates requested from the system. This setting can greatly affect battery life when using the tool. Frequent GPS updates will use a lot of power and the effects are greater if the device is indoors where a position cannot be obtained.

• **Output** - The output is a set of comma separated files containing the requested data. The number of files and the file size is determined by the configuration. These files can be viewed using Microsoft Excel.

**Snapshot Plug-in**

• **Log path** - Specifies the base path to use to store the snapshot files

• **Log filename** - Specifies the base filename for all the snapshot files. This file number will be appended to this base filename when saving the snapshot.

• **Log interval** - Specifies the interval, in milliseconds, on which to invoke a detailed snapshot.

• **Log file count** - The number of snapshot files to keep on the filesystem. Once the maximum number of files is reached, the existing files will start to be overwritten.

• **Log CPU usage** - Enables detailed per process CPU logging in the snapshot.

• **Log memory usage** - Enables logging of detailed per process memory usage in the snapshot.

• **Log power info** - Enables logging of detailed power information including battery life, on time, charging, and wake locks.

• **Log processes** - Enables dumping the complete process list in the snapshot.

• **Log threads** - Enables dumping all processes and their threads in the snapshot.

• **Log system properties** - Enables dumping of all system properties on the device. This includes build/version information as well as state information.

• **Log network info** - Enables dumping of all available network interfaces and the routing table.

• **Log filesystem info** - Enables dumping of the available volumes on the file system and the free storage space for each.
• **Log usage stats** - Enables dumping of detailed usage information for each package on the device. This includes the number of starts and duration of each run.

• **Output** - The snapshot plug-in outputs a series of individual snapshot files. Every snapshot creates a new file and each file is not limited in size. The disk usage is managed by keeping a pool of log files with a configurable size.

**Logcat Plug-in**

Logcat is an essential debugging tool on Android devices. RxLogger provides the ability to record data from all four of the available logcat buffers. The Logcat plug-in has the ability to collect data from multiple logcat buffers provided by the system. Currently these are the main, event, radio, and system buffers. Each of the settings are available for each buffer independently unless otherwise noted.

• **Log path** - Specifies the high level log path for storage of all logcat logs. This setting applies globally to all logcat buffers.

• **Enable logcat** - Enables logging for this logcat buffer.

• **Log interval** - Sets the interval, in milliseconds, on which to flush the log buffer to the file.

• **Log filename** - Specifies the base log filename for this logcat buffer. The current file count is appended to this name.

• **Log file count** - Specifies the number of log files to keep and rotate through. Each log file is subject to the max log size option.

• **Max log size** - Specifies the maximum size, in kilobytes, of an individual log file.

• **Output** - The logcat plug-in outputs a series of text files in accordance with the configuration. The files contain the output of the logcat buffer flushed at the specified interval.

**PushPullClient Plug-in**

The PushPullClient plug-in is designed to automatically push log files to a remote FTP server on a regular basis. It also has the capability to pull a remote file from the FTP server to a local directory on the device to automatically pull down a new configuration file so that the configuration of the tool can be set and updated remotely. The tool uses a flag file on the FTP site (based on device serial number) to ensure the file is only pulled once. By removing the flag file for a particular device you can force it to download the file again.

• **Hostname** - Specifies the ftp server to connect to.

• **Username** - Specifies the username to use to log onto the FTP server.

• **Password** - Specifies the password to use to log onto the FTP server.

• **Enable push** - Enables pushing of file to the specified FTP server.

• **Push interval** - Specifies the amount of time, in milliseconds, in between pushes to the FTP server.

• **Local push directory** - Specifies the local directory to push files from.

• **Remote push directory** - Specifies the remote directory to push files to. A separate folder will be created for each device using the device serial number.

• **Wakeup for push time** - If the pull interval is set to 0, this will specify a specific time to initiate an FTP push.

• **Do push on start** - Enable an FTP push upon startup of the plug-in.

• **Enable pull** - Enable FTP pull functionality.

• **Pull interval** - Specifies the amount of time, in milliseconds, in between pulls from the FTP server.
• **Remote pull directory** - Specifies the directory on the FTP server where the file to be pulled will be located.

• **Remote pull filename** - Specifies the file to be pulled from the FTP server.

• **Local pull directory** - Specifies the local directory to store the file pulled from the FTP server.

**TCPDump Plug-in**

The TCPDump plug-in facilitates the capturing of network traces to be viewed in Wireshark or a similar tool that can decode .cap files.

• **Log path** - Specifies the location to store the TCPDump output log files.

• **Base filename** - Specifies the base filename to use when storing the TCPDump files. The index number of the current log file will be appended to this filename.

• **Log file count** - Specifies the number of log files to cycle through when storing the network traces.

• **Max file size** - Specifies the maximum file size, in megabytes, for each log file created.

• **Output** - The TCPDump plug-in outputs a set of .cap files according to the configurable options. These are binary files and can be opened with Wireshark tool.

**ANR Plugin**

Application Not Responsive (ANR) indicates that a running application’s UI thread is not responding for a specified time period. RxLogger is able to detect this condition and trigger a copy of the call stack trace of the unresponsive application into the log directory. The event will also be indicated in the high level CSV log.

• **Log path** - Specifies the default log path to store the ANR log files.

• **Max file size** - Specifies the maximum file size, in killobytes, of the ANR trace to be copied. If the file is too large, the copy will be skipped. On older devices that append each ANR event to the same trace file the size can get very large. In this case we will avoid expending resources to copy the large file every time.

• **Output** - The ANR plug-in creates text files in the specified log directory that contain the call stacks of application’s that have been shut down by the system due to an ANR event.

**Kernel Plug-in**

• **Enable Plugin** - Enables logging for this kernel buffer.

• **Log path** - Specifies the high level log path for storage of all kernel logs. This setting applies globally to all kernel buffers.

• **Kernel Log filename** - Specifies the base log filename for this kernel buffer. The current file count is appended to this name.

• **Max Kernel log size** - Specifies the maximum size, in kilobytes, of an individual log file.

• **Kernel Log interval** - Sets the interval, in milliseconds, on which to flush the log buffer to the file.

• **Kernel Log file count** - Specifies the number of log files to keep and rotate through. Each log file is subject to the max log size option.

• **Output** - The kernel plug-in outputs a series of text files in accordance with the configuration. The files contain the output of the kernel buffer flushed at the specified interval.
Configuration File

RxLogger configuration can be set using an XML file. The *config.xml* configuration file is located on the microSD card in the *RxLogger/config* folder. Copy the file from the device to a host computer using a USB connection. Edit the configuration file and replace the '.XML' file on the device. There is no need to stop and restart the RxLogger service since the file change is automatically detected.

Enabling Logging

1. Touch 📈.
2. Touch 📈.
3. Touch Start.
4. Touch 📈.

Disabling Logging

1. Touch 📈.
2. Touch 📈.
3. Touch Stop.
4. Touch 📈.

Extracting Log Files

1. Connect the device to a host computer using an USB connection.
2. Using a file explorer, navigate to the *RxLogger* folder.
3. Copy the file from the device to the host computer.
4. Disconnect the device from the host computer.
This chapter includes instructions on cleaning and storing the device, and provides troubleshooting solutions for potential problems during operation.

Maintaining the MC67

For trouble-free service, observe the following tips when using the MC67:

- Do not scratch the screen of the MC67. When working with the MC67, use the supplied stylus or plastic-tipped pens intended for use with a touch-sensitive screen. Never use an actual pen or pencil or other sharp object on the surface of the MC67 screen. We recommend using a screen protector, p/n KT-129195-01R.
- The touch-sensitive screen of the MC67 is glass. Do not drop the MC67 or subject it to strong impact.
- Protect the MC67 from temperature extremes. Do not leave it on the dashboard of a car on a hot day, and keep it away from heat sources.
- Do not store or use the MC67 in any location that is dusty, damp, or wet.
- Use a soft lens cloth to clean the MC67. If the surface of the MC67 screen becomes soiled, clean it with a soft cloth moistened with a diluted window-cleaning solution.
- Periodically replace the rechargeable battery to ensure maximum battery life and product performance. Battery life depends on individual usage patterns.
- A screen protector is applied to the MC67. We recommend using this to minimize wear and tear. Screen protectors enhance the usability and durability of touch screen displays. Benefits include:
  - Protection from scratches and gouges
  - Durable writing and touch surface with tactile feel
  - Abrasion and chemical resistance
  - Glare reduction
  - Keeping the device’s screen looking new
  - Quick and easy installation.
Battery Safety Guidelines

• The area in which the units are charged should be clear of debris and combustible materials or chemicals. Particular care should be taken where the device is charged in a non-commercial environment.

• Follow battery usage, storage, and charging guidelines found in this guide.

• Improper battery use may result in a fire, explosion, or other hazard.

• To charge the mobile device battery, the battery and charger temperatures must be between +32 ºF and +104 ºF (0 ºC and +40 ºC).

• To charge the mobile device battery, the battery and charger temperatures must be between 0 ºC and +45 ºC (+32 ºF and +113 ºF).

• Do not use incompatible batteries and chargers. Use of an incompatible battery or charger may present a risk of fire, explosion, leakage, or other hazard. If you have any questions about the compatibility of a battery or a charger, contact the Global Customer Support Center.

• For devices that utilize a USB port as a charging source, the device shall only be connected to products that bear the USB-IF logo or have completed the USB-IF compliance program.

• To enable authentication of an approved battery, as required by IEEE1725 clause 10.2.1, all batteries will carry a hologram. Do not fit any battery without checking it has the authentication hologram.

• Do not disassemble or open, crush, bend or deform, puncture, or shred.

• Severe impact from dropping any battery-operated device on a hard surface could cause the battery to overheat.

• Do not short circuit a battery or allow metallic or conductive objects to contact the battery terminals.

• Do not modify or remanufacture, attempt to insert foreign objects into the battery, immerse or expose to water or other liquids, or expose to fire, explosion, or other hazard.

• Do not leave or store the equipment in or near areas that might get very hot, such as in a parked vehicle or near a radiator or other heat source. Do not place battery into a microwave oven or dryer.

• Battery usage by children should be supervised.

• Please follow local regulations to properly dispose of used rechargeable batteries.

• Do not dispose of batteries in fire.

• In the event of a battery leak, do not allow the liquid to come in contact with the skin or eyes. If contact has been made, wash the affected area with large amounts of water and seek medical advice.

• If you suspect damage to your equipment or battery, contact the Customer Support to arrange for inspection.

Cleaning Instructions

CAUTION Always wear eye protection.

Read warning label on compressed air and alcohol product before using.

If you have to use any other solution for medical reasons please contact the Global Customer Support Center for more information.
**Approved Cleanser Active Ingredients**

100% of the active ingredients in any cleaner must consist of one or some combination of the following: isopropyl alcohol, bleach/sodium hypochlorite\(^1\) (see important note below), hydrogen peroxide, or mild dish soap.

**IMPORTANT** Use pre-moistened wipes and do not allow liquid cleaner to pool.

\(^1\)When using sodium hypochlorite (bleach) based products always follow the manufacturer’s recommended instructions: use gloves during application and remove the residue afterwards with a damp alcohol cloth or a cotton swab to avoid prolonged skin contact while handling the device.

Due to the powerful oxidizing nature of sodium hypochlorite the metal surfaces on the device are prone to oxidation (corrosion) when exposed to this chemical in the liquid form (including wipes). In the event that these type of disinfectants come in contact with metal on the device, prompt removal with an alcohol-dampened cloth or cotton swab after the cleaning step is critical.

**Harmful Ingredients**

The following chemicals are known to damage the plastics on the device and should not come in contact with the device: ammonia solutions, compounds of amines or ammonia; acetone; ketones; ethers; aromatic and chlorinated hydrocarbons; aqueous or alcoholic alkaline solutions; ethanolamine; toluene; trichloroethylene; benzene; carboxlic acid and TB-lysoform.

**Cleaning Instructions**

Do not apply liquid directly to the device. Dampen a soft cloth or use pre-moistened wipes. Do not wrap the device in the cloth or wipe, but gently wipe the unit. Be careful not to let liquid pool around the display window or other places. Allow the unit to air dry before use.

**Special Cleaning Notes**

Many vinyl gloves contain phthalate additives, which are often not recommended for medical use and are known to be harmful to the housing of the device. The device should not be handled while wearing vinyl gloves containing phthalates, or before hands are washed to remove contaminant residue after gloves are removed. If products containing any of the harmful ingredients listed above are used prior to handling the device, such as hand sanitizer that contain ethanolamine, hands must be completely dry before handling the device to prevent damage to the plastics.

**Cleaning Materials Required**

- Alcohol wipes
- Lens tissue
- Cotton-tipped applicators
- Isopropyl alcohol
- Can of compressed air with a tube.

---

**WARNING!** Avoid exposing this product to contact with hot oil or other flammable liquids. If such exposure occurs, unplug the device and clean the product immediately in accordance with these guidelines.
Cleaning Frequency

The cleaning frequency is up to the customer’s discretion due to the varied environments in which the mobile devices are used. They may be cleaned as frequently as required, but it is advisable to clean the camera window periodically when used in dirty environments to ensure optimum performance.

Approved Cleanser Active Ingredients

100% of the active ingredients in any cleaner must consist of one or some combination of the following: isopropyl alcohol, bleach/sodium hypochlorite, hydrogen peroxide or mild dish soap.

Harmful Ingredients

The following chemicals are known to damage the plastics on the device and should not come in contact with the device: ammonia solutions, compounds of amines or ammonia; acetone; ketones; ethers; aromatic and chlorinated hydrocarbons; aqueous or alcoholic alkaline solutions; ethanolamine; toluene; trichloroethylene; benzene; carbolic acid and TB-lysoform.

Cleaning Instructions

Do not apply liquid directly to the device. Dampen a soft cloth or use pre-moistened wipes. Do not wrap the device in the cloth or wipe, but gently wipe the unit. Be careful not to let liquid pool around the display window or other places. Allow the unit to air dry before use.

Special Cleaning Notes

Many vinyl gloves contain phthalate additives, which are often not recommended for medical use and are known to be harmful to the housing of the device. The device should not be handled while wearing vinyl gloves containing phthalates, or before hands are washed to remove contaminant residue after gloves are removed. If products containing any of the harmful ingredients listed above are used prior to handling the device, such as hand sanitizer that contain ethanolamine, hands must be completely dry before handling the device to prevent damage to the plastics.

Cleaning Materials Required

- Alcohol wipes
- Lens tissue
- Cotton-tipped applicators
- Isopropyl alcohol
- Can of compressed air with a tube.

Cleaning the MC67

Housing

Using the alcohol wipes, wipe the housing including buttons.
Display
The display can be wiped down with the alcohol wipes, but care should be taken not to allow any pooling of liquid around the edges of the display. Immediately dry the display with a soft, non-abrasive cloth to prevent streaking.

Camera and Exit Window
Wipe the camera and exit window periodically with a lens tissue or other material suitable for cleaning optical material such as eyeglasses.

Housing
Using the alcohol wipes, wipe the housing including keys and in-between keys.

Display
The display can be wiped down with the alcohol wipes, but care should be taken not to allow any pooling of liquid around the edges of the display. Immediately dry the display with a soft, non-abrasive cloth to prevent streaking.

Camera Window
Wipe the camera window periodically with a lens tissue or other material suitable for cleaning optical material such as eyeglasses.

Connector Cleaning
To clean the connectors:
1. Remove the main battery from mobile computer.
2. Dip the cotton portion of the cotton-tipped applicator in isopropyl alcohol.
4. Repeat at least three times.
5. Use the cotton-tipped applicator dipped in alcohol to remove any grease and dirt near the connector area.
6. Use a dry cotton-tipped applicator and repeat steps 4 through 6.

CAUTION Do not point nozzle at yourself and others, ensure the nozzle or tube is away from your face.

7. Spray compressed air on the connector area by pointing the tube/nozzle about ½ inch away from the surface.
8. Inspect the area for any grease or dirt, repeat if required.

Cleaning Cradle Connectors
To clean the connectors on a cradle:
1. Remove the DC power cable from the cradle.
2. Dip the cotton portion of the cotton-tipped applicator in isopropyl alcohol.
3. Rub the cotton portion of the cotton-tipped applicator along the pins of the connector. Slowly move the applicator back-and-forth from one side of the connector to the other. Do not leave any cotton residue on the connector.

4. All sides of the connector should also be rubbed with the cotton-tipped applicator.

**CAUTION** Do not point nozzle at yourself and others, ensure the nozzle or tube is away from your face.

5. Spray compressed air in the connector area by pointing the tube/nozzle about ½ inch away from the surface.

6. Remove any lint left by the cotton-tipped applicator.

7. If grease and other dirt can be found on other areas of the cradle, use a lint-free cloth and alcohol to remove.

8. Allow at least 10 to 30 minutes (depending on ambient temperature and humidity) for the alcohol to air dry before applying power to cradle.
   
   If the temperature is low and humidity is high, longer drying time is required. Warm temperature and dry humidity requires less drying time.

**Cleaning Frequency**

The cleaning frequency is up to the customer’s discretion due to the varied environments in which the mobile devices are used. They may be cleaned as frequently as required, but it is advisable to clean the camera window periodically when used in dirty environments to ensure optimum performance.

**Troubleshooting**

The following tables provides typical problems that might arise and the solution for correcting the problem.

**MC67**

<table>

**SE4500–SR Decode Zone**

The figure below shows the decode zone for the SE4500-SR. Typical values appear. SE4500-SR Decode Distances lists the typical distances for selected bar code densities. The minimum element width (or “symbol density”) is the width in mils of the narrowest element (bar or space) in the symbol.

✓  **NOTE**  Typical performance at 73°F (23°C) on high quality symbols in normal room light.
Note: Typical performance at 73˚F (23˚C) on high quality symbols in normal room light.

Vcc = 3.3V

Depth of Field

* Minimum distance determined by symbol length and scan angle.
