Terms of Use

- Proprietary Statement
  This manual contains proprietary information of Zebra Technologies Corporation and its subsidiaries ("Zebra Technologies"). It is intended solely for the information and use of parties operating and maintaining the equipment described herein. Such proprietary information may not be used, reproduced, or disclosed to any other parties for any other purpose without the express, written permission of Zebra Technologies.

- Product Improvements
  Continuous improvement of products is a policy of Zebra Technologies. All specifications and designs are subject to change without notice.

- Liability Disclaimer
  Zebra Technologies takes steps to ensure that its published Engineering specifications and manuals are correct; however, errors do occur. Zebra Technologies reserves the right to correct any such errors and disclaims liability resulting therefrom.

- Limitation of Liability
  In no event shall Zebra Technologies or anyone else involved in the creation, production, or delivery of the accompanying product (including hardware and software) be liable for any damages whatsoever (including, without limitation, consequential damages including loss of business profits, business interruption, or loss of business information) arising out of the use of, the results of use of, or inability to use such product, even if Zebra Technologies has been advised of the possibility of such damages. Some jurisdictions do not allow the exclusion or limitation of incidental or consequential damages, so the above limitation or exclusion may not apply to you.

Introduction

This manual describes how to install, configure and use Workforce Connect Voice Client.

✓ NOTE: Screens and windows pictured in this guide are samples and can differ from actual screens.

PBX Integration Statement

Avaya Aura configuration references contained within this document is based on Avaya Aura version 6.3. Generally Avaya configuration elements are maintained in subsequent releases, however cannot be guaranteed. Reader is advised to consult Avaya Aura configuration guide for releases above 9.0 and use in conjunction with this documentation.

✓ NOTE: Workforce Connect Voice Client requires a minimum Avaya Aura version 6.3.

Chapter Descriptions

Topics covered in this guide are as follows:

• Configuring the Client, describes the steps you need to configure the device.
• PBX Configuration, describes the steps you need to take configure the PBX.
• Dynamic Configuration, describes the procedures to dynamically configure the WFC client using an XML variable file.
• Settings, provides detailed information on configuring settings.
• Logging, describes the process used to capture and collect WFC Voice Client log files and Fusion log files.
• Headless Mode and WFCVoice Service, describes the procedures to configure WFC Voice client as a background service.
• Button Actions, includes a table listing the XML tags used to define a button action.
• XML Tags, includes a table listing all XML tags used in the Workforce Connect Voice Client configuration file and where they are valid.
• XML Example - Profile, provides an XML example for the Profile section.
About This Guide

- **XML Example - Footer**, provides an XML example for the Footer section.
- **XML Example - Dashboard**, provides an XML example for the Dashboard section.
- **XML Example - Call Buttons**, provides an XML example for the In-Call Buttons section.
- **Configuring a Proxy Server**, explains how to configure a proxy server.
- **Network Ports and Protocols**, provides an overview of the ports and protocols the WFC Voice Client uses on supported Zebra devices.

---

Notational Conventions

The following conventions are used in this document:

- **Bold** text is used to highlight the following:
  - Dialog box, window and screen names
  - Drop-down list and list box names
  - Check box and radio button names
  - Icons on a screen
  - Key names on a keypad
  - Button names on a screen.
- Bullets (•) indicate:
  - Action items
  - Lists of alternatives
  - Lists of required steps that are not necessarily sequential.
- Sequential lists (e.g., those that describe step-by-step procedures) appear as numbered lists.

---

Related Documents and Software

The following documents provide more information about the Workforce Connect Voice Client.

- **Best Practices Guide:Deploying VoWLAN Over Cisco Wireless Networks**, p/n MN001146A02
- **Best Practices Guide: Deploying VoWLAN Over WiNG5 Wireless Networks**, p/n MN001150A02

For the latest version of this guide and all guides, go to: [www.zebra.com/support](http://www.zebra.com/support).

---

Service Information

If you have a problem with your equipment, contact Zebra Global Customer Support for your region. Contact information is available at: [www.zebra.com/support](http://www.zebra.com/support).

When contacting support, please have the following information available:

- Serial number of the unit
- Model number or product name
- Software type and version number.
Zebra responds to calls by email, telephone or fax within the time limits set forth in support agreements.

If your problem cannot be solved by Zebra Customer Support, you may need to return your equipment for servicing and will be given specific directions. Zebra is not responsible for any damages incurred during shipment if the approved shipping container is not used. Shipping the units improperly can possibly void the warranty.

If you purchased your Zebra business product from a Zebra business partner, contact that business partner for support.
PBX Configuration

Introduction

This chapter describes the steps you need to configure the PBX.

The following topics are covered:

- Creating Users
- Communication Manager Endpoint Configuration
- WFC Settings Configuration
- Administrative Settings.

Collect Necessary Information

Assemble the following information before you begin to configure the Avaya Aura PBX and the mobile device:

- User ID and Password
- Extension Number
- Server Address.
Creating Users

✓ NOTE: The procedure described below for creating a user in the Avaya Aura System Manager is for demonstration purposes. The procedure and parameters may vary, depending on your version of the System Manager and system configuration. Refer to Avaya documentation for the exact steps in creating a user.

1. Open the Avaya Aura System Manager.
   Verify that the Avaya Aura software is at version of 6.x or above.
2. Click Home.
3. Click Users Management.

Figure 96  Aura System Manager

4. Click User Management.
5. Click **Manage Users**.

6. Click **New**.

7. Enter the **Last Name**, **First Name** and **Login Name**.

8. Set **Authentication Type** to Basic.

9. Click **Communication Profile** tab.
10. Enter the Communication Profile password.
11. Click **New** to add a Communication Address.
12. In the **Type** drop down, select Avaya SIP.
13. In the **Fully Qualified Address** field, enter the extension number and domain.
14. Click **Add**.
15. Make sure **Session Manager Profile** is checked.
16. Enter the Primary Session Manager, Origination Sequence, Termination Sequence and Home Location as shown in the SIP Registration.

**Figure 100**  SIP Registration
17. In the **System** drop down, select CM.

18. In the **Profile Type** drop down, select Endpoint.

19. In the **Extension** field, enter the Extension.

   Click the **Endpoint Editor** button to configure the buttons and features for that handset on Communication Manager.

20. In the **Template** drop down, select 9611SIP_DEFAULT_CM_6_3.

21. Go back to **Manage Users**.

22. Click **Commit**.
Figure 102  New User Profile - Commit
Communication Manager Endpoint Configuration

23. Click Home > Elements > Communication Manager.

24. Select Endpoints > Manage Endpoints.

25. Select the endpoint to change.

26. Click Edit to make changes.

27. In Features Options tab, enable Bridge Call Alerting.
28. In **Button Assignment** tab, click **Feature Buttons** tab.

**IMPORTANT:** The feature buttons shown in the following figure can only be configured from the PBX. The buttons are pushed via TFTP 46xxsettings.xml file to the client during the registration process. There is no option to manually configure these buttons in the WFC Voice Client.
29. Add and enable buttons for Bridge Appearances, Call Park, Call Unpark, Call Fwd, Call Fwd Busy Do Not Answer, Auto Callback, Exclusion, Directed Pickup, Call Pickup, Extended Call Pickup. The argument for CFW buttons are populated by the client.

**Figure 107** Bridge Button Configuration

![Bridge Button Configuration](image)

**NOTE:** The call-fwd Button Feature is linked to the **Forward All** soft-button on WFC. The cfwd-bsyda Button Feature is linked to the **Forward Busy** soft-button on WFC.

**Figure 108** In-Call Button Configuration

![In-Call Button Configuration](image)
WFC Settings Configuration

While configuring the WFC application, only three settings are mandatory:

- User
- Password
- Server Address. User/admin must enter the Session Manager Secure Module IP address.

Figure 109  WFCVoice Settings

During the registration process, Workforce Connect Voice Client application downloads file 46XXsettings.xml from the Avaya Aura Utility Server.

Setting the Utility Server IP Address

The steps below are required to set the utility server IP address into the WFC application configuration.

1. Touch the three dots in the upper right of the screen. A menu appears.
2. Touch Setting > Advanced Settings > Connection Parameters > HTTP Server Address.

Figure 110  Add HTTP Server Address

3. Enter the Utility Server IP address. For example: 10.5.97.248.
This allows the client to download the 46xx.txt settings file from the Utility Server and populate the pilot number in the Voice Mail button of the client.

**Setup Verification**

To verify the client is registered and can make calls:

1. From the registered device, launch the WFC Voice Client application.
2. Open the Avaya Aura System Manager.
3. Click **Home**.
4. Click **Session Manager**.
5. Click **System Status and User Registration**.
Administrative Settings

The WFC Voice Client primarily behaves as a 9611G deskset and is configured similar to a deskset in the Avaya Aura PBX. However, there are some differences due to the nature of the client. As the system is configured to support the WFC Voice Client, please keep the following distinctions in mind. This chapter highlights some of the major differences, and is not a complete list.

DHCP Options

The WFC Voice Client only supports DHCP option 150. Other options as described in the Administering Avaya 9601/9608/9608G/9611G/9621G/9641G IP Deskphones SIP guide are not supported. See DHCP Option 150 on page 40 for more information on providing configuration information via DHCP option 150.

Initial IP-IP Direct Media

The WFC Voice Client does not support Initial IP-IP Direct Media. The Initial IP-IP Direct Media value must be configured as n. Since WFC Voice Client calls use the media resources from the Avaya Aura® Communication Manager, ensure that the Avaya Aura® Communication Manager Media cards have sufficient DSPs.

Codec Support

The WFC Voice Client supports the following codecs:

- G.711 (mu-law and A-law)
- G.729
- G.722
- GSM

The configuration in the PBX should use these codecs. Refer to the Administering Avaya 9601/9608/9608G/9611G/9621G/9641G IP Deskphones SIP guide for more information on configuring codecs in the PBX.

VLAN

The WFC Voice Client does not support VLAN settings as described in Avaya documentation (refer to Administering Avaya 9601/9608/9608G/9611G/9621G/9641G IP Deskphones SIP). The WFC Voice Client is designed to work on WLAN and expects the AP's to assign VLAN settings as required.

SNMP

The WFC Voice Client does not support SNMP as described in Avaya documentation (refer to Administering Avaya 9601/9608/9608G/9611G/9621G/9641G IP Deskphones SIP).

Ping and traceroute

The WFC Voice Client does not support ping or traceroute messages as described in Avaya documentation (refer to Administering Avaya 9601/9608/9608G/9611G/9621G/9641G IP Deskphones SIP).
Introduction

This chapter describes how to install, activate and configure the Workforce Connect Voice Client (WFC Voice Client).

Determine Deployment Readiness

Assess the suitability of your Wireless Local Area Network (WLAN) for voice traffic, using the Best Practices Guide: Deploying VoWLAN Over Aruba Wireless Networks, Deploying VoWLAN Over Cisco Wireless Networks or Deploying VoWLAN Over WiNG5 Wireless Networks.

WARNING: If your WLAN is not suitable for voice traffic, WFC Voice Client will perform on a best effort basis. Contact the Zebra Software Support Desk for more information: www.zebra.com/support.

Connect Android Wireless Device to Network

Zebra WFC Voice Client for Android includes support for the following device types:

- Enterprise Mobile devices
- Consumer Smartphone devices (evaluation only).

Connect the Android wireless device to the network. See device instructions for more information. If you need assistance, contact the Zebra Support at: www.zebra.com/support.
Configuring the Client

Install Workforce Connect Voice Client

There are two ways to install the WFC Voice Client:

- USB tether or web server - This section describes using a USB tether or web server to install the WFC Voice Client APK manually or using ADB commands.
- Mobile Device Manager (MDM) - For information on installing the WFC Voice Client APK using an MDM, refer to the Workforce Connect Voice Client Configuration Guide for Mobile Device Managers.

Download and Install Board Support Package (BSP) Operating System

For instructions please refer to www.zebra.com/support and login using your partner login for latest BSP and integration instructions. If you need assistance, contact Zebra Support at: www.zebra.com/support.

Download and Install Android Application Packager (APK) Client

1. From a web browser, go to the Zebra Licensing End User Portal.
   To access the Zebra Licensing End User Portal, follow the instructions in the Software Entitlement email from Zebra. Portal access requires registration at Zebra.com and authorization as a portal user by Zebra Support.
2. From the Zebra Licensing End User Portal, download the latest WFC Voice APK file.

Installing the APK Manually

To install the APK manually:

1. Save the APK file to the root directory of the target device using one of the following methods:
   - USB tether
   - Web server download (if your network supports this option).
2. On the Android device, go to the Apps list and open the file browser.
3. Navigate to the APK file.
4. Run and install the APK file.
5. Check that the WFC Voice Client is available in the Apps Screen.

   The WF Connect icon should be visible in the list of available applications.

Installing the APK Using ADB Commands

To install the APK using an Android Debug Bridge (ADB) connection, open a command prompt and send the following ADB commands to the device:

   adb install --global <apk_file_name>
   adb shell dumpsys deviceidle whitelist +com.symbol.wfc.voice
   adb shell appops set com.symbol.wfc.voice SYSTEM_ALERT_WINDOW allow

Where <apk_file_name> is the name of the WFC Voice APK file.

Create a Shortcut for the Workforce Connect Voice Client

To create a shortcut:

1. In the Apps Screen, press and hold on the WF Connect icon.
2. Drag the WF Connect Icon to the Home screen.

3. Drop icon on Home screen.

Open Workforce Connect Voice Client

To open the WFC Voice Client, use one of the following methods:

- Touch the WF Connect icon on the Home screen.
Touch on the WF Connect icon on the Android Home Screen.

- Touch on the WF Connect icon on the Apps screen.

The App Activation screen displays.

---

### Activate Workforce Connect Voice Client

When the WFC Voice Client starts for the first time, the **App Activation** screen appears. A valid license is required for each PBX. The WFC Voice Client is activated by using an activation key, Mobile Device Manager (MDM), or USB tether.

> **NOTE:** When activating a device that does not have direct access to the license source, use a proxy server. See Configuring a Proxy Server on page 194.

### Activate Using an Activation Key

To activate the WFC Voice Client:
1. Open the WFC Voice Client.

**Figure 5** App Activation Screen

![App Activation Screen]

2. Use one of the following activation methods:
   - **Keys or features** - Acquires licenses from the default licensing source.
     In the **keys or features** field, enter your activation code(s) separated by commas.

   ![Toggle Button] Clear All Fields

   **NOTE:** The WFC Voice Client version 8.2.729 requires a license source URL when activating using an activation key. Refer to the Workforce Connect Voice Client 8.2.x Administration Guide for Licensing.

3. To enter a **device alias**, touch the **toggle button** and, in the **device alias** field, enter a name to identify the device on the license source.

4. Touch **Register App**.
   The **About** screen appears, displaying currently licensed keys and features.

**Figure 6** About Screen

![About Screen]

5. Touch **OK**.
Activate Using an MDM

Configuring the WFC Voice Client using an MDM requires a deployment package and the WFC Voice Client configuration file. The configuration file `WFConnect.xml` stores all WFC Voice client configuration parameters, including licensing information, as key and value pairs. For detailed information on the XML configuration file, see Settings on page 46.

Define the licensing information using the following XML tags:

- **license_key** - Contains one or more WFC Voice Client activation keys separated by commas.
  Example: `<license_key>abcd-1234-ab12-cd34-5678-efgh-ef56-gh78</license_key>`
- **license_source** - The URL of a license source.
  - WFC Voice Client version 8.2.729 - Enter the following URL:
  - WFC Voice Client version 8.2.730 or later - Leave this field blank.
- **license_alias** - Identifies the device on the license source. (Optional)

MDM Deployment

During runtime, WFC Voice Client listens for `wfc.voice.ACTION_UPDATE_CONFIG` intent. When the WFC Voice Client receives the intent from an MDM, the configuration file uses `WFConnect.xml` to update the WFC Voice Client configuration parameters. Use a single intent to update multiple configuration parameters by including multiple element and value pairs.

For detailed information on MDM deployment, refer to the Workforce Connect Voice Client 8.x Configuration Guide for Mobile Device Managers.

Activate Using a USB Tether

Send the `WFConnect.xml` configuration file to the device using a USB tether, use an Android Debug Bridge (ADB) connection.

✔️ **NOTE:** It is not recommended to install the WFConnect.xml file using a USB tether because it can cause permission issues on the device.

1. Install the WFC Voice Client APK. See Download and Install Android Application Packager (APK) Client on page 27.
2. Copy the `WFConnect.xml` file in the `/sdcard/WFConnect` directory.
3. Open a command prompt and send the following adb command to the device:
   `adb shell am start -a "wfc.voice.ACTION_NEW_CONFIG" --es "profile_uri" "/WFConnect/WFConnect.xml"`

Update License

To update all WFC Voice Client licenses, refer to the Workforce Connect Voice Client 8.2.x Administration Guide for Licensing.

Configure Workforce Connect Voice Client

The WFC Voice Client is configured using the Graphical User Interface (GUI), an MDM, or a USB Tether.
Configure Using the WFC Voice Client GUI

To configure the WFC Voice Client:

1. Touch the menu button.

   Figure 7  WFC Voice Client Menu

2. Touch Settings.

   Figure 8  Enter Password Screen

3. Enter the settings password. The default password is: zamboni.

4. Touch Connection Parameters.

   Figure 9  Connection Parameters

NOTE: It is not recommended to install the WFConnect.xml file using a USB tether because it can cause permission issues on the device.
5. Select a PBX configuration. The default configuration is: **PBX#1 Configuration**. For information on configuring additional PBX types, see Configuring Multiple PBX Types on page 51.

6. Touch the PBX Type field and select Avaya Aura. Enter the User ID.
7. Enter the Password.
8. Enter the Address of the PBX server.

**Figure 10** Enter Parameters

![PBX Type](image)

- PBX Type
- User ID
- Password
- Server Address

**NOTE:** The optional parameters Server Address2 and Server Address 3 are secondary addresses, used if the primary server address is not reachable.

**NOTE:** For information on optional configuration settings, see XML Tags on page 168.

9. Touch the back button three times to return to the WFC Voice Client home screen.

**Figure 11** Confirmation Message

![Confirmation Message](image)
A confirmation that the Configuration has been saved to WFConnect.xml displays.

**Configure Using an MDM**

Configuring the WFC Voice Client using an MDM requires a deployment package and the WFC Voice Client configuration file. The configuration file **WFConnect.xml** stores all WFC Voice client configuration parameters, including licensing information, as key and value pairs. For detailed information on the XML configuration file, see *Settings on page 46*.

Define the licensing information using the following XML tags:

- **license_key** - Contains one or more WFC Voice Client activation keys separated by commas.  
  Example: `<license_key>abcd-1234-ab12-cd34-5678-efgh-ef56-gh78</license_key>`

- **license_source** - The URL of a license source.
  - WFC Voice Client version 8.2.729 - Enter the following URL:  
  - WFC Voice Client version 8.2.730 or later - Leave this field blank.

- **license_alias** - Identifies the device on the license source. (Optional)

**MDM Deployment**

During runtime, WFC Voice Client listens for **wfc.voice.ACTION_UPDATE_CONFIG** intent. When the WFC Voice Client receives the intent from an MDM, the configuration file uses **WFConnect.xml** to update the WFC Voice Client configuration parameters. Use a single intent to update multiple configuration parameters by including multiple element and value pairs.

For detailed information on MDM deployment, refer to the Workforce Connect Voice Client 8.x Configuration Guide for Mobile Device Managers.

**Configure Using a USB Tether**

To send the **WFConnect.xml** configuration file to the device using a USB tether, use an Android Debug Bridge (ADB) connection.

1. Install the WFC Voice Client APK. See Download and Install Android Application Packager (APK) Client on page 27.
2. Copy the **WFConnect.xml** file to the WFConnect directory.
3. Open a command prompt and send the following ADB command to the device:
   ```bash
   adb shell am start -a "wfc.voice.ACTION_NEW_CONFIG" --es "profile_uri" "/WFConnect/WFConnect.xml"
   ```

To update a specific parameter in the **WFConnect.xml** configuration file using ADB, open a command prompt and send an ADB command to the device in the following format:

```bash
$ adb shell am start -a wfc.voice.ACTION_UPDATE_CONFIG --es element value
```

For a list of possible elements and values, see XML Tags.
Dynamic Configuration

Introduction

The WFC Voice Client configuration file defines the operational environment of the SIP client running on Zebra mobile android devices. It has various elements that define the network location of the PBX and, for each device, unique defining operational aspects affecting the user experience. Creating this file manually and distributing this file for each device on an enterprise-wide scale introduces significant administrative overhead.

Dynamic configuration:

• Reduces the administrative effort preparing the WFC Voice Client for enterprise operation
• Provides a flexible delivery environment for the customized configuration
• Provides a method for shared device use without manually reloading the configuration
• Provides backward compatibility for existing customers.

Rather than manually creating a unique configuration for each device, this approach dynamically configures the WFC Voice Client using an XML variable file. File delivery can be manual, by an MDM, or automatic through existing network services.

Overview

The chapter includes:

• Providing a new XML tag that triggers dynamic configuration
• Building a multi-user variable file to build user specific configurations for the WFC Voice Client
• Re-synchronizing the WFC Voice Client with the variable file on a regular basis
• Using DHCP resources to provide auto installation for the file.

Properly configuring these elements allows the WFC Voice Client to register to the PBX.

General Device Use Cases

• A unique user is typically a supervisor or manager with a device with a more advanced feature set that is not shared with any other user. This extension may be shared with that person’s desk phone.
• A shared device is typically for line workers or department staff that use a phone representing a functional area, as opposed to a specific person. The device has a basic feature and may also be uniform, sharing common elements (e.g.; button configurations) across all shared devices.
Device Start-Up

There are three stages of device life-cycle in the customer environment that affect how the WFC Voice Client obtains the suitable runtime configuration:

- Initialized out of the box configuration (no configuration)
- A rebooted device previously configured
- A device reassigned to a new extension / user

Device Identification

The system identifies each mobile device by a unique user ID and password. The user’s credentials are mapped to a specific feature set in the PBX. This requires that the user credentials are loaded into the WFC Voice Client XML and passed to the PBX at registration time.
Profile Configuration

For the WFC Voice Client to connect to a PBX, the Profile section of the WFConnect.xml file must contain XML tags which the device uses to:

- Establish a link to the PBX
- Identify itself to the PBX
- Retrieve the correct privileges and settings.

✓ NOTE: Any element in the WFC Voice Client configuration file can be replaced with a variable.

Connection Attributes

The **sip_userid** and **sip_userpass** provide access to the PBX as shown in the following example:

```
<Profile>
  ...
  <profile_type>AVAYA</profile_type>
  <display>true</display>
  <profname>AVAYA-2808</profname>
  <prof_password></prof_password>
  <sip_userid>2808</sip_userid>
  <sip_userpass>123456</sip_userpass>
  <prof_description>Test-2808</prof_description>
  <sip_mac></sip_mac>
  <sip_remhost>10.80.212.44</sip_remhost>
  ...
</Profile>
```

The profile section requires:

- An IP address in the **sip_remhost** field to target the appropriate PBX.
- A user ID (**sip_userid**) and password (**sip_pass**) to identify the client to the PBX.
Dynamic Configuration

Enabling Dynamic Configuration

The var_location tag enables dynamic configuration, and reduces the entire profile section of the WFConnect.xml file to one line.

```xml
<WFConnect>
  <Profile>
    <var_location>file:///wfconnect/wfcvariable.xml</var_location>
  </Profile>
</WFConnect>
```

√ NOTE: File location is for demonstration purposes. The actual file location may vary.

When the WFC Voice Client initializes and parses the XML file, this tag instructs the device to retrieve the wfcvariable.xml file from the stated location. The location can be:

- A local file on the mobile device
- Provisioned by an MDM
- Side loaded manually
- A URL

Wcfvariable.xml File

This file collects and organizes XML tags to populate the run-time WFConnect.xml file. Tags that are not declared use default values. The Users tag supports and organizes multiple users. The users section is displayed as a list on WFC Voice Client sign-in screen. When the display tag for an entry is set to true, users can select a profile from the list.

When the display tag is set to false, the profname and prof_password tags are used. These tags are used for user authentication when selecting a hidden profile for a dedicated user. For a shared extension, these tags are rarely used.

Users can each be a complete and unique configuration, or they can re-use components, such as the following buttons example.

```xml
<!-- Avaya Aura Users -->
<Entry>
  <profile_type>AURA</profile_type>
  <display>true</display>
  <profname>AURA-2797</profname>
  <prof_password></prof_password>
  <sip_userid>2797</sip_userid>
  <sip_userpass>123456</sip_userpass>
  <prof_description>MC40.1</prof_description>
  <sip_mac></sip_mac>
  <sip_remhost>10.80.212.44</sip_remhost>
</Entry>
```
<Entry>
    <profile_type>AURA</profile_type>
    <display>true</display>
    <profname>AURA-2799</profname>
    <prof_password></prof_password>
    <sip_userid>2799</sip_userid>
    <sip_userpass>123456</sip_userpass>
    <prof_description>MC40.2</prof_description>
    <sip_mac></sip_mac>
    <sip_remhost>10.80.212.44</sip_remhost>
</Entry>

<Entry>
    <profile_type>AURA</profile_type>
    <display>true</display>
    <profname>AURA-2800</profname>
    <prof_password></prof_password>
    <sip_userid>2800</sip_userid>
    <sip_userpass>123456</sip_userpass>
    <prof_description>MC40.3</prof_description>
    <sip_mac></sip_mac>
    <sip_remhost>10.80.212.44</sip_remhost>
</Entry>

<Entry>
    <profile_type>AURA</profile_type>
    <display>true</display>
    <profname>AURA-2801</profname>
    <prof_password></prof_password>
    <sip_userid>2801</sip_userid>
    <sip_userpass>123456</sip_userpass>
    <prof_description>MC40.4</prof_description>
    <sip_mac></sip_mac>
    <sip_remhost>10.80.212.44</sip_remhost>
</Entry>

**XML File Location**

The previous example shows the `wfcvariable.xml` variable file resident on the device. The variable file can also reside on a centrally accessible server that the client can access. This provides service to all devices in the enterprise and central administrative control.

The `var_location` element specifies whether the WFC Voice Client looks for the XML file on the device (a local file) or at a network location, for example:

- Local: file:///WFConnect/wfcvariable.xml
• HTTP: http://10.5.90.10/wfcvariable.xml
• HTTPS: https://10.5.90.10/wfcvariable.xml
• TFTP: tftp://10.5.90.10/wfcvariable.xml

This provides options for deploying the configuration files. For example, an enterprise using an MDM may supply both the Profile section and the variable file to the device and also have a central location for the variable file.

**DHCP Option 150**

The WFC Voice Client also supports DHCP Option 150 for retrieving the `wfcvariable.xml` file. If the `var_location` tag is not specified in the WFConnect.xml configuration, the client attempts to download the `wfcvariable.xml` file from the TFTP server specified in the Option 150 string.

**Configuration Resynchronization**

Synchronizing dynamic configuration ensures that devices always have the most current configuration available from the network server or MDM. For example, when a user logs in to an extension, the configuration files may change. The new configuration files are available when the user logs off from the current session and the WFC service re-processes the variable files.

**NOTE:** The system administrator must ensure that updates are posted to the correct location available to the WFC Voice Client client.
Dynamic Configuration

Dynamic Configuration Start-Up - Server Side

The following diagram describes the steps WFC Voice Client follows on the server side to download dynamic configuration during initialization.

**Figure 12** Dynamic Configuration Start-Up Process

---

**Dynamic Mode**

Network Services – Option 60 Support in Sunrise products

```xml
<WFConnect>
  <Profile>
    <var_location>http://192.168.10.10/WFConnect/wfcvariable.xml</var_location>
  </Profile>
</WFConnect>
```

MDM or Side loaded config file

```xml
<WFConnect>
  <Profile>
    <var_location>http://192.168.10.10/WFConnect/wfcvariable.xml</var_location>
  </Profile>
</WFConnect>
```

Var file downloaded for later processing once extension is selected.

Does WFConnect file exist?

No Dynamic Config process. End.

Start Up WFC for Manual Config

Dynamic Configuration

Dynamic Configuration Start-Up - Client Side

The following diagram describes the steps WFC Voice Client follows on the client side to download dynamic configuration during initialization.

**Figure 13** Dynamic Configuration Start-Up Process - Continued
XML File Examples

The following example displays the standard profile and different ways the voice client is able to retrieve a Dynamic Workforce Configuration XML file. Options include local XML and TFTP downloaded XML configuration.

**Figure 14** XML Files Example

**Standard Config**

(Legacy Mode)

```
<WFConnect>
  <Profile>
    <profile_type>PBX</profile_type>
    <sip_mac>aaaabbbbccc1</sip_mac>
    <sip_remhost>192.168.10.50</sip_remhost>
  </Profile>
</WFConnect>
```

**Variable File**

Wfcvariable.xml

```
<User>
  <Entry>
    <display>false</display>
    <profilename>1001</profilename>
    <password>abc123</password>
    <prof_description>boss</prof_description>
    <sip_mac>aaaabbbbccc1</sip_mac>
    <sip_remhost>192.168.10.50</sip_remhost>
    <layout_location>http://192.168.10.10/WFConnect/buttons_1001.xml</layout_location>
  </Entry>
</User>
```

**Buttons_1001.xml**

```
<Footer>
  <Button>
    <title>History</title>
    <action>HISTORY</action>
    <value></value>
    <enabled>true</enabled>
    <confirm>false</confirm>
    <description></description>
    <fg_color>#FFFFFF</fg_color>
    <icon></icon>
  </Button>
</Footer>
```

**Dynamic Mode**

Network Services – Option 60 Support in Sunrise products

```
<WFConnect>
  <Profile>
    <var_location>http://192.168.10.10/WFConnect/wfcvariable.xml</var_location>
  </Profile>
</WFConnect>
```

**MDM or Side loaded config file**

```
<WFConnect>
  <Profile>
    <var_location>http://192.168.10.10/WFConnect/wfcvariable.xml</var_location>
  </Profile>
</WFConnect>
```

**WFC Service Start-up:**

- Request Var File
  - Var File sent to device.
  - At WFC UI Activation user prompted for Prof_Names
  - User scrolls through Profile Names and makes selection.

- Request Button File
  - Button File sent to device.
  - Var file and Button file has all information needed to build WFConfig.xml file.
Testing Remote Dynamic Configuration

A test environment can use any remote server supporting web services.

To set up a lab system:

1. Ensure the server is running IIS to support Web services.
2. Establish a WFC Voice Client website.
3. Create the website and add a virtual folder.
4. Open the Default Documents properties.

**Figure 15** Server Manager

5. Set the folder for the WFC Voice Client XML file repository.
6. Test the settings to verify the system and default user can access the files.

   ✔  **NOTE:** To test accessibility of the files, point your browser to the web site.

7. After determining access to the files, modify the XML files accordingly:
   - An example of remote access in **WFConnect.xml** is:
     
     ```xml
     <Profile>
     <var_location>http://192.168.10.45/var/wfcvariable.xml</var_location>
     </Profile>
     
     ```
   - An example of remote access in the **wfcvariable.xml** is:
     
     ```xml
     <layout_location>http://192.168.10.45/var/buttons_5002.xml</layout_location>
     
     ```

A remote server allows consistency of delivery to the remote device. Logging on and off the device synchronizes changes to the device. Each login retrieves the existing XML file targeted for that device.
Introduction

This chapter contains information on settings used to configure and customize the WFC Voice Client.

The following sections provide detailed information on:

- **Profile Settings** - creating, editing, loading and saving a settings profile.
- **Connection Parameters** - configuring up to four PBX types.
- **Audio Settings** - configuring advanced audio settings.
- **UI Settings** - controlling the appearance and functionality of WFC Voice Client.
- **Call Settings** - configuring advanced call settings.
- **Ringtones** - configuring WFC Voice Client ringtones.
- **Miscellaneous Settings** - locating help files and editing the settings password.

Exiting WFC Voice Client:

1. Touch the menu button, then **Settings**. The password dialog box appears.
2. Enter password (default: zamboni).
3. Touch **Enter**.
4. Touch **Stop Service > Yes**.

This action can also be initiated using ADB, an MDM, or a third party app. For example, in ADB you can use the following command:

```
$ adb shell am broadcast -a wfc.voice.STOP_APP
```

Reloading WFC Voice Client:

1. Touch the menu button.
2. Touch **Reload**.

This action can also be initiated using ADB, an MDM, or a third party app. For example, in ADB you can use the following command:

```
$ adb shell am broadcast -a wfc.voice.SIGN_OUT
```
Profile Settings

The WFC Voice Client profile is an XML file that contains all the settings for the current WFC Voice Client session.

Create Profile

Create a new profile. A new XML file is created in the WFConnect folder.

To create a new profile:
1. Touch the menu button, then Settings. The password dialog box appears.
2. Enter password (default: zamboni).
3. Touch Enter.
4. Touch the menu button, then Create new profile.
5. Touch Save current profile.
6. Enter a file name for the new profile.
7. Touch Save. The file is saved in the WFConnect folder.
8. Touch the Back button to return to the WFC Voice Client home screen.

Change Profile Name

To change the name of the current profile:
1. Touch the menu button, then Settings. The password dialog box appears.
2. Enter password (default: zamboni).
3. Touch Enter.
4. Touch Profile name.
5. Enter a file name for the new profile.
6. Touch OK. The file name in the WFConnect folder is updated.
7. Touch the Back button to return to the WFC Voice Client home screen.

Shared Profiles URI

Set the URI of shared profile located on a remote or local server.

To set the URI of a shared profile:
1. Copy the profile from the WFConnect folder using a USB tether.
2. Move the profile to a remote or local server.
   Supported protocols are file, http, https, and tftp.
3. From the WFC Voice Client, touch the menu button, then Settings. The password dialog box appears.
4. Enter password (default: zamboni).
5. Touch Enter.
6. Touch Shared Profiles URI.
7. Enter the URI of the shared profile.
8. Touch OK.
9. Touch the Back button to return to the WFC Voice Client home screen.
Load New Profile

Load profiles previously saved to the:

- WFConnect folder
- SD Card

Loading a New Profile Using the GUI

1. Touch the menu button, then Settings. The password dialog box appears.
2. Enter password (default: zamboni).
3. Touch Enter.
4. Scroll to the bottom of the screen.
5. Touch Load new profile. The Select Profile File dialog box appears.

![Select Profile Popup](image)

6. Select a profile file name.
7. Touch the Back button or Refresh button to load new profile.

Loading a New Profile Using XML

<WFConnect>
  <Profile>
    <profname>WFConnect.xml</profname>
  </Profile>
</WFConnect>

Installing the APK Using ADB Commands

To install the APK using an Android Debug Bridge (ADB) connection, open a command prompt and send the following ADB command to the device:

```
$ adb shell am start -a wfc.voice.ACTION_NEW_CONFIG --es profile_uri <configuration_file>
```

Where `<configuration_file>` is the URI of the new XML configuration file.

Save Current Profile

Using the same file name, save the current profile to replace an existing XML file.

To save an existing profile:

1. Touch the menu button, then Settings. The password dialog box appears.
2. Enter password (default: zamboni).
3. Touch Enter.
4. Scroll the bottom of the screen.
5. Touch Save current profile. The current profile name appears.
6. Touch **Save**. The file is saved in the **WFConnect** folder.
7. Touch the **Back** button to return to the WFC Voice Client home screen.

**Edit a Profile Using XML**

To edit a saved profile using XML, copy the new profile from the **WFConnect** folder using a USB tether.
Connection Parameters

Users can make and receive a call using any configured PBX type. This section describes how to configure up to three additional PBX types using the WFC Voice Client GUI or WFConnect.xml file.

To configure the default PBX (PBX#1 Configuration) see Configure Workforce Connect Voice Client on page 31.

Figure 18  Connection Parameters
Configuring Multiple PBX Types

Set the configuration parameters for additional PBX types:

**IMPORTANT:** When configuring multiple PBXs, ensure the server IP address and credentials are pointing to the correct PBX call server as indicated by the profile type. For example, the AURA profile must be configured with the IP address and credentials of a AURA call manager.

Audio Settings

**CAUTION:** Changing the default audio settings may have adverse results. Do not modify these settings unless directed to do so by Zebra Technical Support.

This section provides detailed information on configuring advanced audio settings. Use the WFC Voice Client GUI or WFConnect.xml file to customize the Profile section. Both methods are discussed with each Function description.

To configure audio settings:

1. Touch the menu button, then **Settings**. The password dialog box appears.

   ![Figure 19 WFC Voice Client Menu]

2. Enter password (default: zamboni).
3. Touch **Enter**.

   ![Figure 20 WFC Voice Client Settings Menu]

4. Touch **Advanced Settings > Audio Settings**.
Figure 21  Advanced Settings / Audio Settings
Audio Codecs Priorities

Set the audio Codecs preferences.

✅ **NOTE:** Only select audio Codecs available in the PBX.

Using the GUI

1. In **Advanced Settings** select **Audio Settings**.
2. Select **Audio Codecs Priorities**.
3. Select the Codec preference (default order preferred). See **Table 1** for descriptions.
4. Touch **Back** button to return to the WFC Voice Client home screen.

Using XML

```xml
<WFConnect>
  <Profile>
    <codec_ulaw_priority>1</codec_ulaw_priority>
  </Profile>
  ...
</WFConnect>
```

**Table 1** Codecs Priorities

<table>
<thead>
<tr>
<th>Field Type</th>
<th>Description</th>
<th>XML</th>
</tr>
</thead>
<tbody>
<tr>
<td>G.711 u-Law</td>
<td>When selected, assigns preference priority for G.711 u-LAW Voice codec negotiations between PBX and Client.</td>
<td><code>&lt;codec_ulaw_priority&gt;1&lt;/codec_ulaw_priority&gt;</code></td>
</tr>
<tr>
<td>G.729</td>

</tbody>
</table>
Audio Enhancements

This section describes how to enable and disable audio enhancements.

Configuring Audio Enhancements

Set the following audio enhancements:

- Echo Cancellation
- Noise Reduction
- AGC on speaker
- AGC on earpiece

Using the GUI
1. In Advanced Settings select Audio Settings.
2. Scroll down to Audio Enhancements.
3. Tap the check boxes next to the items to enable (default: disabled).
4. Touch the Back button to return to the WFC Voice Client home screen.

Using XML
<WFConnect>
  <Profile>
    <use_aec>false</use_aec>
    <use_noise>false</use_noise>
    <use_agc_speaker>false</use_agc_speaker>
    <use_agc_ear>false</use_agc_ear>
  </Profile>
  ...
</WFConnect>

Input / Output Audio

Set the input / output volume.

Using the GUI
1. In Advanced Settings select Audio Settings.
2. Scroll down to Input Audio Volume and Output Audio Volume under Audio Enhancements.
3. Use the slider to select the volume levels for Input and Output Audio (default 1).
4. Touch the Back button to return to the WFC Voice Client home screen.

Using XML
<WFConnect>
  <Profile>
    <audio_gain_in>1</audio_gain_in>
    <audio_gain_out>1</audio_gain_out>
  </Profile>
  ...
</WFConnect>

Audio Debugging Tools

Set the following debugging tools:

- Show jitter stats
- Save incoming voice
- Native Sample Rate

<table>
<thead>
<tr>
<th>Using the GUI</th>
<th>Using XML</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. In <strong>Advanced Settings</strong> select <strong>Audio Settings</strong>.</td>
<td><code>&lt;WFConnect&gt;</code></td>
</tr>
<tr>
<td>2. Scroll down to <strong>Audio Debugging Tools</strong>.</td>
<td><code>&lt;Profile&gt;</code></td>
</tr>
<tr>
<td>3. Tap the check boxes next to the items to enable (default: disabled).</td>
<td><code>  &lt;show_jitter_stats&gt;false&lt;/show_jitter_stats&gt;</code></td>
</tr>
<tr>
<td>4. Touch the <strong>Back</strong> button to return to the WFC Voice Client home screen.</td>
<td><code>  &lt;save_incoming_voice_to_file&gt;false&lt;/save_incoming_voice_to_file&gt;</code></td>
</tr>
<tr>
<td></td>
<td><code>  &lt;use_native_sample_rate&gt;false&lt;/use_native_sample_rate&gt;</code></td>
</tr>
<tr>
<td></td>
<td><code>&lt;/Profile&gt;</code></td>
</tr>
<tr>
<td></td>
<td><code>...</code></td>
</tr>
<tr>
<td></td>
<td><code>&lt;/WFConnect&gt;</code></td>
</tr>
</tbody>
</table>
UI Settings

Use the GUI to configure the User Interface. Settings made in the GUI are saved to the XML file. The GUI settings and the XML file drives the WFC Voice Client look and functionality. Alternatively edit the XML file, WFConnect.xml, to make the same GUI settings. The saved WFConnect.xml file can be modified and use to configure other devices.

The WFConnect.xml file must be stored on the device in the WFCconnect folder. If this file does not exist, the application uses the default parameter values. The WFC Voice Client XML configuration file has the following sections which must be present in the file and in the following order:

- Profile section
- Footer section
- Dashboard section
- Call buttons section.

**IMPORTANT:** All these sections must be present in the XML file and they must be in the order listed above.

Configuration File Sections

Profile Section

The Profile section contains all the global settings and only requires to begin using the WFC Voice Client on a PBX.

- SIP Remote Host (PBX Server Address) <sip_remhost>

Unless specified, the Profile section of the WFC Voice Client uses the default settings for Audio Settings, Call Settings, Miscellaneous Settings, Logging and Optional Services (This is a suggested best practice). Use the WFC Voice Client GUI or WFConnect.xml file to customize the Profile section. Both methods are discussed with each Function description.

See XML Example - Profile for a profile section example.

Footer Section

The Footer section defines the buttons, or soft keys, on the WFC Voice Client home screen. The buttons are listed in the order they appear on the screen. A maximum of six buttons can be added. The Footer always displays until a call is initiated. While additional items can be defined in the Footer, the following items are strongly recommended:

- History
- Redial
- Dial
- Contacts
- Voicemail.

Use the WFC Voice Client GUI or WFConnect.xml file to customize the Footer. Both methods are discussed with each Function description.
NOTE: The footer area does not require a <columns> element as it is always one row of buttons.

IMPORTANT: If a footer section is not required, do not define any buttons between the <Footer> and the </Footer> tags.

See XML Example - Footer for a footer section example.

Dashboard Section
The Home Screen Dashboard section defines the buttons in the dashboard area of the screen and their layout on the WFC Voice Client screen. The Dashboard displays functions and features specific to the end user. A maximum of 12 buttons can be displayed on the screen; additional buttons are accessed by scrolling up and down. Use the WFC Voice Client GUI or WFConnect.xml file to customize the Footer. Both methods are discussed with each Function description.

See XML Example - Dashboard for a dashboard section example.

Call Buttons Section
The Call Buttons section defines the buttons in the call buttons area of the screen and their layout on the WFC Voice Client screen. In-Call displays the available function and action of call buttons that can be accessed during a call. While on a call the user may wish to perform one of the following:

• Add Call
• Home
• Hold
• Resume
• Park
• Transfer
• Conference
• Complete
• End Call.

See XML Example - Call Buttons for a call button section example.

Headless Mode
For detailed information on Headless Mode see Headless Mode and WFCVoice Service.
Background Logo

Icon Library

To choose a background from the icon library:

<table>
<thead>
<tr>
<th>Using the GUI</th>
<th>Using XML</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>1.</strong> In <strong>Advanced Settings</strong> select <strong>UI Settings &gt; Background Logo.</strong></td>
<td><strong>Using XML</strong></td>
</tr>
<tr>
<td><strong>2.</strong> From the <strong>LIBRARY</strong> tab, select the new background. A yellow box appears around the selected background.</td>
<td><strong>&lt;WFConnect&gt;</strong></td>
</tr>
<tr>
<td><strong>3.</strong> Touch the <strong>Back</strong> button to return to the WFC Voice Client home screen.</td>
<td><strong>&lt;Profile&gt;</strong></td>
</tr>
<tr>
<td></td>
<td><strong>&lt;background_logo&gt;logo&lt;/background_logo&gt;</strong></td>
</tr>
<tr>
<td></td>
<td><strong>&lt;/Profile&gt;</strong></td>
</tr>
<tr>
<td></td>
<td><strong>...</strong></td>
</tr>
<tr>
<td></td>
<td><strong>&lt;/WFConnect&gt;</strong></td>
</tr>
</tbody>
</table>

Custom Background Configuration

The user can create a custom background. To select a custom background:

1. Connect the device to a host computer using a USB cable.
2. **From the host computer**, copy the icon file to the **WFConnect** folder on device.

<table>
<thead>
<tr>
<th>Using the GUI</th>
<th>Using XML</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Using XML</strong></td>
<td><strong>&lt;WFConnect&gt;</strong></td>
</tr>
<tr>
<td><strong>&lt;Profile&gt;</strong></td>
<td><strong>&lt;background_logo&gt;logo&lt;/background_logo&gt;</strong></td>
</tr>
<tr>
<td><strong>&lt;/Profile&gt;</strong></td>
<td><strong>&lt;/WFConnect&gt;</strong></td>
</tr>
</tbody>
</table>

Custom Background Configuration

Using the GUI

1. In **Advanced Settings** select **UI Settings > Background Logo.**
2. From the **SDCARD** tab, select the new background. A yellow box appears around the selected background.
3. Touch the **Back** button to return to the WFC Voice Client home screen.

Using XML

```xml
<WFConnect>
    <Profile>
        <background_logo>custom_logo.png</background_logo>
    </Profile>
    ...
</WFConnect>
```

Buttons Padding

Set the horizontal spacing between in-call buttons from 0 pixels to 50 pixels, in 10 pixel increments.

<table>
<thead>
<tr>
<th>Using the GUI</th>
<th>Using XML</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>1.</strong> In <strong>Advanced Settings</strong> select <strong>UI Settings &gt; Background Logo.</strong></td>
<td><strong>Using XML</strong></td>
</tr>
<tr>
<td><strong>2.</strong> Slide the <strong>Buttons padding</strong> slider (default 0).</td>
<td><strong>&lt;WFConnect&gt;</strong></td>
</tr>
<tr>
<td><strong>3.</strong> Touch <strong>Back</strong> to return to the WFC Voice Client home screen.</td>
<td><strong>&lt;Profile&gt;</strong></td>
</tr>
<tr>
<td></td>
<td><strong>&lt;buttons_padding&gt;50&lt;/buttons_padding</strong></td>
</tr>
<tr>
<td></td>
<td><strong>&lt;/Profile&gt;</strong></td>
</tr>
<tr>
<td></td>
<td><strong>...</strong></td>
</tr>
<tr>
<td></td>
<td><strong>&lt;/WFConnect&gt;</strong></td>
</tr>
</tbody>
</table>
Dialer Padding

Set vertical padding at the bottom of the contacts and history screens from 0 pixels to 200 pixels, in 1 pixel increments.

Using the GUI

1. In **Advanced Settings** select **UI Settings > Background Logo**.
2. Slide the **Dialer padding** slider (default 0).
3. Touch **Back** to return to the WFC Voice Client home screen.

Using XML

```
<WFConnect>
  <Profile>
    <dialer_padding>78</dialer_padding>
  </Profile>
...  
</WFConnect>
```

Graphical User Interface Design Tool

Use the GUI Design Tool to customize the Footer, Dashboard and In-Call screen from within the WFC Voice Client. Configure each to fit the specific needs of the customer. The appearance of the WFC Voice Client is configured using the GUI or by directly modifying the **WFConnect.xml** file. Details on specific XML settings and the construct of the XML configuration file are discussed in more detail later in this guide.

To begin using the GUI Design Tool, follow the steps below to configure the Footer, Dashboard or In-Call screens:

1. Launch WFC Voice Client.
2. Touch the menu button, then **Settings**. The password dialog box appears.

Figure 22  WFC Voice Client Menu

```
Add Log Marker
About
Ringtone
Settings
Reload
Sign Out
```

3. Enter password (default: **zamboni**).
4. Touch **Enter**.
5. Touch **Advanced Settings > UI Settings**.

**Figure 24** Advanced Settings / UI Settings

6. Select **Edit Dashboard**, **Edit Footer** or **Edit In-Call Button**.

**Using the UI Settings GUI Design Tool**

The following diagram describes the buttons available for each area.
Figure 25  GUI Design Tool - Footer

Header Label will change based on the selected area to configure:

- Footer Design
- Dashboard Design
- In-Call Designer

Buttons that will be available for use in the selected area:

- Footer
- Dashboard
- In-Call

Touch **Add** to add a button.

Touch **Edit** to edit the button configuration.

Touch a button to edit. A yellow border appears indicating the button to be configured.

Touch **Delete** to remove selected button.

Touch **Up** to move the button to the left in the list.

Touch **Down** to move the button right in the list.

The Footer and In-Call views use the layout displayed in Figure 25. The Dashboard view has an additional toggle button in the bottom center of the screen to change the number of columns on the dashboard (3 or 4).

Figure 26  GUI Design Tool - Dashboard

Touch **3 Columns** or **4 Columns** to change the number of columns.
Home Screen Dashboard

Figure 27  Home Screen Dashboard

In-Call Dashboard

Figure 28  In-Call Dashboard
Button Configuration

The following sections describes each button that can be placed on the UI. Each section lists the Designer Tool procedure and corresponding XML configuration.

Call

Call is the ability to make a telephone call to a specific number or location using a prefix. The administrator identifies a target by its extension (phone number) and enters this into the Value field along with the prefix. The user can then use this function to initiate a call to the preset destination.

Figure 29  Sample Button Edit Screen
Configuring the Call Button

Using the GUI

1. In UI Settings select Edit Footer, Edit Dashboard or Edit In-Call > Add.
2. Select the new button. A yellow box appears around the selected button.
3. Touch Edit.
4. Select the check box next to Confirm On Click to enable this (the default is Disabled).
5. Touch Action and select CALL from the Select Action menu.
6. If the dialed number has a prefix, in the Value field, enter the prefix number.
7. In the Title field, enter Call.
8. In the Description field, enter a short description of the button function.
9. Touch Icon and select an icon from the Select Icon menu. See Icons on page 94.
10. Touch BG to set the background color. See Button Background Color on page 97.
11. Touch FG to set the foreground text color. See Button Text Color on page 98.
12. Touch the Back button to return to the WFC Voice Client home screen.

Using XML

<Footer> or <Dashboard> or <CallButtons>

...<Button>

<title>Call</title>
<action>CALL</action>
<value>9</value>
<enabled>true</enabled>
<confirm>false</confirm>
<description>Make a call</description>
<bg_color>#FF001425</bg_color>
<fg_color>#FFFFFF</fg_color>
<icon>Default</icon>

</Button>

...</Footer> or </Dashboard> or </CallButtons>
**Dial**

Dial is the ability to dial a specified extension or number to initiate a telephone call. A caller identifies a target by its extension (phone number) and originates the call.

**Configuring the Dial Button**

</tbody>
</table>
## Start App

Start Application defines a button to launch another application on the device. When the button is pressed WFC Voice Client minimizes to run in the background and the defined application launches. For example, a button can be placed in the Footer to open an email application.

### Configuring the Start App

<table>
<thead>
<tr>
<th>Using the GUI</th>
<th>Using XML</th>
</tr>
</thead>
</table>
| 1. In **Advanced Settings** select **UI Settings** > **Edit Footer**, **Edit Dashboard** or **Edit In-Call** > **Add**.  
2. Select the new button. A yellow box appears around the selected button.  
3. Touch **Edit**.  
4. Select the check box next to **Confirm On Click** to enable this (the default is **Disabled**).  
5. Touch **Action** and select **START_APP**.  
6. Touch **Select App Package** and select the application from the **Select App Package** menu.  
7. In the **Title** field, enter the application name.  
8. In the **Description** field, enter a short description of the button function.  
9. Touch **Icon** and select an icon from the **Select Icon** menu. See **Icons on page 94**.  
10. Touch **BG** to set the background color. See **Button Background Color on page 97**.  
11. Touch **FG** to set the foreground text color. See **Button Text Color on page 98**.  
12. Touch the **Back** button to return to the WFC Voice Client home screen. | Opening the music application example is shown in the following XML.  
```xml
<Footer> or <Dashboard> or <CallButtons>
...
<Button>
  <title>Email</title>
  <action>START_APP</action>
  <value>com.android.email</value>
  <enabled>true</enabled>
  <confirm>false</confirm>
  <description>Open email application</description>
  <icon>email.png</icon>
</Button>
...
</Footer> or </Dashboard> or </CallButtons>
Log Marker

Log Marker creates a time stamp in the logs. If you experience any issues with WFC Voice Client functionality, the time stamp focuses troubleshooting of the device to the time the issue occurred for more rapid resolution.

Configuring the Log Marker

<table>
<thead>
<tr>
<th>Using the GUI</th>
<th>Using XML</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. In <strong>Advanced Settings</strong> select <strong>UI Settings &gt; Edit Footer, Edit Dashboard</strong> or <strong>Edit In-Call &gt; Add.</strong></td>
<td><strong>&lt;Footer&gt; or &lt;Dashboard&gt; or &lt;CallButtons&gt;</strong></td>
</tr>
<tr>
<td>2. Select the new button. A yellow box appears around the selected button.</td>
<td><strong>&lt;Button&gt;</strong></td>
</tr>
<tr>
<td>3. Touch <strong>Edit.</strong></td>
<td><strong>&lt;title&gt;Log Marker&lt;/title&gt;</strong></td>
</tr>
<tr>
<td>4. Select the check box next to <strong>Confirm On Click</strong> to enable this (the default is Disabled).</td>
<td><strong>&lt;action&gt;LOG_MARKER&lt;/action&gt;</strong></td>
</tr>
<tr>
<td>5. Touch <strong>Action</strong> and select <strong>LOG_MARKER</strong> from the <strong>Select Action</strong> menu.</td>
<td><strong>&lt;value&gt;&lt;/value&gt;</strong></td>
</tr>
<tr>
<td>6. In the <strong>Title</strong> field, enter <strong>Log Marker.</strong></td>
<td><strong>&lt;enabled&gt;true&lt;/enabled&gt;</strong></td>
</tr>
<tr>
<td>7. In the <strong>Description</strong> field, enter a short description of the button function.</td>
<td><strong>&lt;confirm&gt;false&lt;/confirm&gt;</strong></td>
</tr>
<tr>
<td>8. Touch <strong>Icon</strong> and select an icon from the <strong>Select Icon</strong> menu. See <strong>Icons on page 94.</strong></td>
<td><strong>&lt;description&gt;Create time stamp&lt;/description&gt;</strong></td>
</tr>
<tr>
<td>9. Touch <strong>BG</strong> to set the background color. See <strong>Button Background Color on page 97.</strong></td>
<td><strong>&lt;bg_color&gt;#FF001425&lt;/bg_color&gt;</strong></td>
</tr>
<tr>
<td>10. Touch <strong>FG</strong> to set the foreground text color. See <strong>Button Text Color on page 98.</strong></td>
<td><strong>&lt;fg_color&gt;#FFFFFF&lt;/fg_color&gt;</strong></td>
</tr>
<tr>
<td>11. Touch the <strong>Back</strong> button to return to the WFC Voice Client home screen.</td>
<td><strong>&lt;icon&gt;Default&lt;/icon&gt;</strong></td>
</tr>
</tbody>
</table>

**Speed Dial 0-9**

Speed Dial places a telephone call to a preset number/extension. Set up to 10 speed dial buttons on the dashboard through the GUI interface.

### Configuring the Speed Dial Button

<table>
<thead>
<tr>
<th>Using the GUI</th>
<th>Using XML</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. In <strong>Advanced Settings</strong> select <strong>UI Settings</strong> &gt; Edit Footer, Edit Dashboard or Edit In-Call &gt; Add.</td>

</tbody>
</table>
Redial

Redial places a telephone call to the most recently call location. It is highly recommended that the redial button resides only in the Footer.

Configuring the Redial Button

Using the GUI

1. In **Advanced Settings** select **UI Settings > Edit Footer > Add**.
2. Select the new button. A yellow box appears around the selected button.
3. Touch **Edit**.
4. Select the check box next to **Confim On Click** to enable this (the default is Disabled).
5. Touch **Action** and select **REDIAL**.
6. In the **Title** field, enter **Redial**.
7. In the **Description** field, enter a short description of the button function.
8. Touch **Icon** and select an icon from the **Select Icon** menu. See **Icons on page 94**.
9. Touch **BG** to set the background color. See **Button Background Color on page 97**.
10. Touch **FG** to set the foreground text color. See **Button Text Color on page 98**.
11. Touch the **Back** button to return to the WFC Voice Client home screen.

Using XML

```xml
<Footer>
  ...
  <Button>
    <title>Redial</title>
    <action>REDIAL</action>
    <value></value>
    <enabled>true</enabled>
    <confirm>false</confirm>
    <description>Dial the last number called</description>
    <bg_color>#FF001425</bg_color>
    <fg_color>#FFFFFFFF</fg_color>
    <icon>Default</icon>
  </Button>
  ...
</Footer>
```
**Suspend Mode**

Suspend Mode blocks all incoming or outgoing calls.

**Configuring the Suspend Mode Button**

73
History

History lists recently called numbers and incoming calls, including missed calls.

Configuring the History Button

Using the GUI

1. In Advanced Settings select UI Settings > Edit Footer, Edit Dashboard or Edit In-Call > Add.
2. Select the new button. A yellow box appears around the selected button.
3. Touch Edit.
4. Select the check box next to Confirm On Click to enable this (the default is Disabled).
5. Touch Action and select HISTORY.
6. In the Title field, enter History.
7. In the Description field, enter a short description of the button function.
8. Touch Icon and select an icon from the Select Icon menu. See Icons on page 94.
9. Touch BG to set the background color. See Button Background Color on page 97.
10. Touch FG to set the foreground text color. See Button Text Color on page 98.
11. Touch the Back button to return to the WFC Voice Client home screen.

Using XML

<Footer> or <Dashboard> or <CallButtons>
...
<Button>
<title>History</title>
<action>HISTORY</action>
<value></value>
<enabled>true</enabled>
<confirm>false</confirm>
<description>Display recently called numbers and incoming calls</description>
<bg_color>#FF001425</bg_color>
<fg_color>#FFFFFFFF</fg_color>
<icon>Default</icon>
</Button>
...
</Footer> or </Dashboard> or </CallButtons>
Contacts

The Contacts button dials a new number by selecting an existing contact. Add and store contacts locally on the device.

Configuring the Contacts Button

Using the GUI

1. In Advanced Settings select UI Settings > Edit Footer, Edit Dashboard or Edit In-Call > Add.
2. Select the new button. A yellow box appears around the selected button.
3. Touch Edit.
4. Select the check box next to Confirm On Click to enable this (the default is Disabled).
5. Touch Action and select CONTACTS.
6. In the Title field, enter Contacts.
7. In the Description field, enter a short description of the button function.
8. Touch Icon and select an icon from the Select Icon menu. See Icons on page 94.
9. Touch BG to set the background color. See Button Background Color on page 97.
10. Touch FG to set the foreground text color. See Button Text Color on page 98.
11. Touch the Back button to return to the WFC Voice Client home screen.

Using XML

<Footer> or <Dashboard> or <CallButtons>
...
<Button>
   <title>Contacts</title>
   <action>CONTACTS</action>
   <value></value>
   <enabled>true</enabled>
   <confirm>false</confirm>
   <description>Display contacts</description>
   <bg_color>#FF001425</bg_color>
   <fg_color>#FFFFFFFF</fg_color>
   <icon>Default</icon>
</Button>
...
</Footer> or </Dashboard> or </CallButtons>
Favorites

The Favorites button dials a new number by selecting a contact that is set as a favorite. Set contacts as favorites locally on the device.

Configuring the Favorites Button

Using the GUI

1. In **Advanced Settings** select **UI Settings** > **Edit Footer**, **Edit Dashboard** or **Edit In-Call** > **Add**.
2. Select the new button. A yellow box appears around the selected button.
3. Touch **Edit**.
4. Select the check box next to **Confirm On Click** to enable this (the default is Disabled).
5. Touch **Action** and select **FAVORITES**.
6. In the **Title** field, enter **Favorites**.
7. In the **Description** field, enter a short description of the button function.
8. Touch **Icon** and select an icon from the **Select Icon** menu. See **Icons on page 94**.
9. Touch **BG** to set the background color. See **Button Background Color on page 97**.
10. Touch **FG** to set the foreground text color. See **Button Text Color on page 98**.
11. Touch the **Back** button to return to the WFC Voice Client home screen.

Using XML

```
<Footer> or <Dashboard> or <CallButtons>
...
<Button>
  <title>Favorites</title>
  <action>FAVORITES</action>
  <value/></value>
  <enabled>true</enabled>
  <confirm>false</confirm>
  <description>Display favorites</description>
  <bg_color>#FF001425</bg_color>
  <fg_color>#FFFFF</fg_color>
  <icon>Default</icon>
</Button>
...
</Footer> or </Dashboard> or </CallButtons>
```
Voicemail

The Voicemail button dials a number configured on the PBX to access Voicemail messages.

Configuring the Voicemail Button

Using the GUI

1. In Advanced Settings select UI Settings > Edit Footer, Edit Dashboard or Edit In-Call > Add.
2. Select the new button. A yellow box appears around the selected button.
3. Touch Edit.
4. Select the check box next to Confirm On Click to enable this (the default is Disabled).
5. Touch Action and select VOICEMAIL.
6. In the Value field, enter the Voicemail Pilot number.
7. In the Title field, enter Voicemail.
8. In the Description field, enter a short description of the button function.
9. Touch Icon and select an icon from the Select Icon menu. See Icons on page 94.
10. Touch BG to set the background color. See Button Background Color on page 97.
11. Touch FG to set the foreground text color. See Button Text Color on page 98.
12. Touch the Back button to return to the WFC Voice Client home screen.

Using XML

<Footer> or <Dashboard> or <CallButtons>

<Button>
  <title>Voicemail</title>
  <action>VOICEMAIL</action>
  <value>9999</value>
  <enabled>true</enabled>
  <confirm>false</confirm>
  <description>Voicemail messages</description>
  <bg_color>#FF001425</bg_color>
  <fg_color>#FFFFFFFF</fg_color>
  <icon>Default</icon>
</Button>

...</Footer> or </Dashboard> or </CallButtons>
Do Not Disturb

Access the Do Not Disturb (DND) feature directly on the phone. Use a Feature Access Code (FAC) to enable or disable this feature. Enabling DND suspends all personal calls targeted to the extension, and sends the call immediately to the defined Coverage Path. DND also removes the extension from consideration during any Coverage Answer Group, Simultaneous Ringing, and Hunt Group call. This feature is the PBX-based implementation of an endpoint device Call Ignore feature.

Configuring the DND Button

Using the GUI

1. In Advanced Settings select UI Settings > Edit Footer, Edit Dashboard or Edit In-Call > Add.
2. Select the new button. A yellow box appears around the selected button.
3. Touch Edit.
4. Select the check box next to Confirm On Click to enable this (the default is Disabled).
5. Touch Action and select DO_NOT_DISTURB.
6. In the Value field, enter the FAC for the Do Not Disturb feature.
7. In the Title field, enter DND.
8. In the Description field, enter a short description of the button function.
9. Touch Icon and select an icon from the Select Icon menu. See Icons on page 94.
10. Touch BG to set the background color. See Button Background Color on page 97.
11. Touch FG to set the foreground text color. See Button Text Color on page 98.
12. Touch the Back button to return to the WFC Voice Client home screen.

Note: DND is enabled/disabled using Feature Access Code (FAC).

Using XML

```
<Footer> or <Dashboard> or <CallButtons>
...
<Button>
  <title>DND</title>
  <action>DO_NOT_DISTURB</action>
  <value></value>
  <enabled>true</enabled>
  <confirm>false</confirm>
  <description>Ignore incoming calls</description>
  <bg_color>#FF001425</bg_color>
  <fg_color>#FFFFFF</fg_color>
  <icon>Default</icon>
</Button>
...
</Footer> or </Dashboard> or </CallButtons>
```
Add Call

During an active call the Add Call button can dial a preset number. If there is no number in the Value field, it opens the dialer. The current call is placed on hold while the new call is initiated. When the new call connects, you can Transfer, Conference, or End the second call and resume the first call.

**IMPORTANT:** Only available on the In-Call screen only.

Configuring the Add Call Button

<table>
<thead>
<tr>

<td>...</td>
</tr>
<tr>
<td></td>
<td>&lt;/CallButtons&gt;</td>
</tr>
</tbody>
</table>
Home

During an active call the Home button invokes the Dashboard to provide access to Dashboard functions.

**IMPORTANT:** Only available on the In-Call screen.

Configuring the Home Button

### Using the GUI

1. In **Advanced Settings** select **UI Settings > Edit In-Call > Add**.
2. Select the new button. A yellow box appears around the selected button.
3. Touch **Edit**.
4. Select the check box next to **Confirm On Click** to enable this (the default is Disabled).
5. Touch **Action** and select **HOME**.
6. In the **Title** field, enter **Home**.
7. In the **Description** field, enter a short description of the button function.
8. Touch **Icon** and select an icon from the **Select Icon** menu. See **Icons on page 94**.
9. Touch **BG** to set the background color. See **Button Background Color on page 97**.
10. Touch **FG** to set the foreground text color. See **Button Text Color on page 98**.
11. Touch the **Back** button to return to the WFC Voice Client home screen.

### Using XML

```xml
<CallButtons>
  <Button>
    <title>Home</title>
    <action>HOME</action>
    <value></value>
    <enabled>true</enabled>
    <confirm>false</confirm>
    <description>Return to the Home Dashboard</description>
    <bg_color>#FF001425</bg_color>
    <fg_color>#FFFFFFFF</fg_color>
    <icon>Default</icon>
  </Button>
  ...
</CallButtons>
```
Hold

Call Hold politely suspends an active call while you tend to other business or place an additional call using an additional Call Appearance. During call hold, you can switch between the active and held calls at any time.

**IMPORTANT:** Only available on the In-Call screen.

Configuring the Hold Button

**Using the GUI**
1. In **Advanced Settings** select **UI Settings > Edit In-Call > Add**.
2. Select the new button. A yellow box appears around the selected button.
3. Touch **Edit**.
4. Select the check box next to **Confirm On Click** to enable this (the default is Disabled).
5. Touch **Action** and select **HOLD**.
6. In the **Title** field, enter **Hold**.
7. In the **Description** field, enter a short description of the button function.
8. Touch **Icon** and select an icon from the **Select Icon** menu. See **Icons on page 94**.
9. Touch **BG** to set the background color. See **Button Background Color on page 97**.
10. Touch **FG** to set the foreground text color. See **Button Text Color on page 98**.
11. Touch the **Back** button to return to the WFC Voice Client home screen.

**Using XML**

```
<CallButtons>
    ...<Button>
        <title>Hold</title>
        <action>HOLD</action>
        <value></value>
        <enabled>false</enabled>
        <confirm>false</confirm>
        <description>Place call on hold</description>
        <bg_color>#FF001425</bg_color>
        <fg_color>#FFFFFFFF</fg_color>
        <icon>Default</icon>
    </Button>
    ...
</CallButtons>
```
Resume

During an active call touch the Resume button  ► to access the current call on hold.

IMPORTANT: Only available on the In-Call screen.

Configuring the Resume Button

Using the GUI

1. In Advanced Settings select UI Settings > Edit In-Call > Add.
2. Select the new button. A yellow box appears around the selected button.
3. Touch Edit.
4. Select the check box next to Confirm On Click to enable this (the default is Disabled).
5. Touch Action and select RESUME.
6. In the Title field, enter Resume.
7. In the Description field, enter a short description of the button function.
8. Touch Icon and select an icon from the Select Icon menu. See Icons on page 94.
9. Touch BG to set the background color. See Button Background Color on page 97.
10. Touch FG to set the foreground text color. See Button Text Color on page 98.
11. Touch the Back button to return to the WFC Voice Client home screen.

Using XML

<CallButtons>
 ...
 <Button>
   <title>Resume</title>
   <action>RESUME</action>
   <value/></value>
   <enabled>false</enabled>
   <confirm>false</confirm>
   <description>Resume an active call</description>
   <bg_color>#FF001425</bg_color>
   <fg_color>#FFFFFF</fg_color>
   <icon>Default</icon>
 </Button>
 ...
</CallButtons>
**Transfer**

Transfer transfers an active call to a third party. While Call Forwarding must be preconfigured, Call Transfer allows making such call exchanges in real-time with an active call.

**IMPORTANT:** Only available on the In-Call screen.

### Configuring the Transfer Button

<table>

<td><strong>&lt;/Button&gt;</strong></td>
</tr>
<tr>
<td></td>
<td><strong>...</strong></td>
</tr>
<tr>
<td></td>
<td><strong>&lt;/CallButtons&gt;</strong></td>
</tr>
</tbody>
</table>
**End Call**

This function ends a call in any state. It is pushed back from the Workforce Connect client to the PBX.

⚠️ **IMPORTANT:** Only available on the In-Call screen.

✅ **NOTE:** Placing the End Call button on the in-call dashboard replaces the default End Call button.

### Configuring the End Call Button

<table>
<thead>
<tr>
<th>Using the GUI</th>
<th>Using XML</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. In <strong>Advanced Settings</strong> select <strong>UI Settings</strong> &gt; <strong>Edit In-Call</strong> &gt; <strong>Add</strong>.</td>
<td>&lt;CallButtons&gt;</td>
</tr>
<tr>
<td>2. Select the new button. A yellow box appears around the selected button.</td>
<td>...</td>
</tr>
<tr>
<td>3. Touch <strong>Edit</strong>.</td>
<td>&lt;Button&gt;</td>
</tr>
<tr>
<td>4. Select the check box next to <strong>Confirm On Click</strong> to enable this (the default is Disabled).</td>
<td>&lt;title&gt;End Call&lt;/title&gt;</td>
</tr>
<tr>
<td>5. Touch <strong>Action</strong> and select <strong>END_CALL</strong>.</td>
<td>&lt;action&gt;END_CALL&lt;/action&gt;</td>
</tr>
<tr>
<td>6. In the <strong>Title</strong> field, enter <strong>End Call</strong>.</td>
<td>&lt;value&gt;&lt;/value&gt;</td>
</tr>
<tr>
<td>7. In the <strong>Description</strong> field, enter a short description of the button function.</td>
<td>&lt;enabled&gt;true&lt;/enabled&gt;</td>
</tr>
<tr>
<td>8. Touch <strong>Icon</strong> and select an icon from the <strong>Select Icon</strong> menu. See Icons on page 94.</td>
<td>&lt;confirm&gt;false&lt;/confirm&gt;</td>
</tr>
<tr>
<td>9. Touch <strong>BG</strong> to set the background color. See Button Background Color on page 97.</td>
<td>&lt;description&gt;End a call&lt;/description&gt;</td>
</tr>
<tr>
<td>10. Touch <strong>FG</strong> to set the foreground text color. See Button Text Color on page 98.</td>
<td>&lt;bg_color&gt;#FF001425&lt;/bg_color&gt;</td>
</tr>
<tr>
<td>11. Touch the <strong>Back</strong> button to return to the WFC Voice Client home screen.</td>
<td>&lt;fg_color&gt;#FFFFFF&lt;/fg_color&gt;</td>
</tr>
<tr>
<td></td>
<td>&lt;icon&gt;Default&lt;/icon&gt;</td>
</tr>
<tr>
<td></td>
<td>&lt;/Button&gt;</td>
</tr>

<td></td>
<td>...</td>
</tr>
<tr>
<td></td>
<td>&lt;/CallButtons&gt;</td>
</tr>
</tbody>
</table>
List

By default, List displays the speed dial list 0-9. Alternatively, configure the List button to open a menu built from other WFC Voice Client buttons.

**IMPORTANT:** Only available on the In-Call screen.

Configuring the Default List Button

- **NOTE:** This only creates a button. Edit XML file to customize the list.

The List button description appears at the top of the List popup dialog.

<table>
<thead>
<tr>
<th>Using the GUI</th>
<th>Using XML</th>
</tr>
</thead>

</tbody>
</table>

Configuring List Buttons Using XML

List buttons are configured using XML. The List button contains each sub button before the closing **</Button>** element. The List button description appears at the top of the List popup dialog. The sub button description appears as a comment under the button title, identifying which action is performed.

For example, to create a list with three custom buttons (Bedding, Electronics and Toys):
Figure 30  List Button Example

<Footer> or <Dashboard> or <CallButtons>
...
<Button>
<title>List</title>
&action>LIST</action>
[value></value>
<enabled>true</enabled>
<confirm>false</confirm>
<description>Department Extensions </description>
<bg_color>#FF001425</bg_color>
<fg_color>#FFFFFFFF</fg_color>
<icon>Default</icon>
</Button>
<Button>
<title>Bedding</title>
&action>CALL</action>
[value>1111</value>
<enabled>true</enabled>
<confirm>false</confirm>
<description>Bedding Department</description>
<bg_color>#FF001425</bg_color>
<fg_color>#FFFFFFFF</fg_color>
<icon></icon>
</Button>
<Button>
<title>Electronics</title>
&action>CALL</action>
[value>1122</value>
<enabled>true</enabled>
<confirm>false</confirm>
<description>Electronics Department</description>
<bg_color>#FF001425</bg_color>
<fg_color>#FFFFFF</fg_color>
</icon>
</Button>
<Button>
<title>Toys</title>
<action>CALL</action>
<value>1133</value>
<enabled>true</enabled>
<confirm>false</confirm>
<description>Toys Department</description>
<bg_color>#FF001425</bg_color>
<fg_color>#FFFFFF</fg_color>
</icon>
</Button>
</Button>
...
</Footer> or </Dashboard> or </CallButtons>
**Blank**

Blank provides an empty space between buttons for a more customized look and feel. If touched, the Blank button does not perform an action.

**Configuring the Blank Button**

<table>
<thead>
<tr>
<th>Using the GUI</th>
<th>Using XML</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. In Advanced Settings select UI Settings &gt; Edit Footer, Edit Dashboard or Edit In-Call &gt; Add.</td>
<td>&lt;Footer&gt; or &lt;Dashboard&gt; or &lt;CallButtons&gt; ...</td>
</tr>
<tr>
<td>2. Select the new button. A yellow box appears around the selected button.</td>
<td>&lt;Button&gt;</td>
</tr>
<tr>
<td>3. Touch Edit.</td>
<td></td>
</tr>
<tr>
<td>4. Select the check box next to Confirm On Click to enable this (the default is Disabled).</td>
<td>&amp;lt;title&gt;Blank&amp;lt;/title&gt;</td>
</tr>
<tr>
<td>5. Touch Action and select BLANK.</td>
<td>&amp;lt;action&gt;BLANK&amp;lt;/action&gt;</td>
</tr>
<tr>
<td>6. In the Title field, enter Blank.</td>
<td>&amp;lt;value&gt;&amp;lt;/value&gt;</td>
</tr>
<tr>
<td>7. Touch the Back button to return to the WFC Voice Client home screen.</td>
<td>&amp;lt;enabled&gt;true&amp;lt;/enabled&gt;</td>
</tr>
<tr>
<td></td>
<td>&amp;lt;confirm&gt;false&amp;lt;/confirm&gt;</td>
</tr>
<tr>
<td></td>
<td>&amp;lt;description&gt;Empty space&amp;lt;/description&gt; &amp;lt;/icon&gt;</td>
</tr>
<tr>
<td></td>
<td>&amp;lt;/Button&gt; ...</td>
</tr>
<tr>
<td></td>
<td>&lt;/Footer&gt; or &lt;/Dashboard&gt; or &lt;/CallButtons&gt;</td>
</tr>
</tbody>
</table>
## Reload

Reload allows a user to sign out and then automatically sign back in to the WFC Voice Client.

### Configuring the Reload Button

<table>
<thead>
<tr>
<th>Using the GUI</th>
<th>Using XML</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. In <strong>Advanced Settings</strong> select <strong>UI Settings &gt; Edit Dashboard</strong> or <strong>Edit In-Call &gt; Add</strong>.</td>
<td>&lt;Dashboard&gt; or &lt;CallButtons&gt;</td>
</tr>
<tr>
<td>2. Select the new button. A yellow box appears around the selected button.</td>
<td>...</td>
</tr>
<tr>
<td>3. Touch <strong>Edit</strong>.</td>
<td>&lt;Button&gt;</td>
</tr>
<tr>
<td>4. Select the check box next to <strong>Confirm On Click</strong> to enable this (the default is Disabled).</td>
<td>&lt;title&gt;Sign Out&lt;/title&gt;</td>
</tr>
<tr>
<td>5. Touch <strong>Action</strong> and select <strong>SIGNOUT_CHANGE</strong>.</td>
<td>&lt;action&gt;SIGNOUT_CHANGE&lt;/action&gt;</td>
</tr>
<tr>
<td>6. Ensure the <strong>Value</strong> field is empty.</td>
<td>&lt;value&gt;&lt;/value&gt;</td>
</tr>
<tr>
<td>7. In the <strong>Title</strong> field, enter <strong>Sign Out</strong>.</td>
<td>&lt;enabled&gt;true&lt;/enabled&gt;</td>
</tr>
<tr>
<td>8. Touch the <strong>Back</strong> button to return to the WFC Voice Client home screen.</td>
<td>&lt;confirm&gt;false&lt;/confirm&gt;</td>
</tr>
<tr>
<td></td>
<td>&lt;description&gt;&lt;/description&gt;</td>
</tr>
<tr>
<td></td>
<td>&lt;icon&gt;&lt;/icon&gt;</td>
</tr>
<tr>
<td></td>
<td>&lt;scale&gt;CENTER_INSIDE&lt;/scale&gt;</td>
</tr>
<tr>
<td></td>
<td>&lt;/Button&gt;</td>
</tr>
<tr>
<td></td>
<td>...</td>
</tr>
<tr>
<td></td>
<td>&lt;/Dashboard&gt; or &lt;/CallButtons&gt;</td>
</tr>
</tbody>
</table>

This action can also be initiated using ADB, an MDM, or a third party app. For example, in ADB you can use the following command:

```
$ adb shell am broadcast -a wfc.voice.SIGN_OUT
```
Sign Out

Sign Out allows a user to sign out of the WFC Voice Client.

Configuring the Sign Out Button

<table>
<thead>
<tr>
<th>Using the GUI</th>
<th>Using XML</th>
</tr>
</thead>
</table>
| **1.** In **Advanced Settings** select **UI Settings > Edit Dashboard** or **Edit In-Call > Add.**  
2. Select the new button. A yellow box appears around the selected button.  
3. Touch **Edit.**  
4. Select the check box next to **Confirm On Click** to enable this (the default is Disabled).  
5. Touch **Action** and select **SIGNOUT_CHANGE.**  
6. In the **Value** field, enter **0.**  
7. In the **Title** field, enter **Sign Out.**  
8. Touch the **Back** button to return to the WFC Voice Client home screen. | **<Dashboard>** or **<CallButtons>**  
...  
**<Button>**  
  **<title>**Sign Out**</title>**  
  **<action>**SIGNOUT_CHANGE**</action>**  
  **<value>**0**</value>**  
  **<enabled>true</enabled>**  
  **<confirm>false</confirm>**  
  **<description></description>**  
  **<icon></icon>**  
  **<scale>**CENTER_INSIDE**</scale>**  
**</Button>**  
...  
**</Dashboard>** or **</CallButtons>** |

This action can also be initiated using ADB, an MDM, or a third party app. For example, in ADB you can use the following command:

$ adb shell am broadcast -a wfc.voice.SIGN_OUT --es change 0
### Ringtone

Sign Out allows a user to sign out of the WFC Voice Client.

#### Configuring the Blank Button

<table>
<thead>
<tr>
<th>Using the GUI</th>
<th>Using XML</th>

<tr>
<td></td>
<td>&lt;description&gt;&lt;/description&gt;</td>
</tr>
<tr>
<td></td>
<td>&lt;icon&gt;&lt;/icon&gt;</td>
</tr>
<tr>
<td></td>
<td>&lt;scale&gt;CENTER_INSIDE&lt;/scale&gt;</td>
</tr>
<tr>
<td></td>
<td>&lt;/Button&gt;</td>
</tr>
<tr>
<td></td>
<td>...</td>
</tr>
<tr>
<td></td>
<td>&lt;/Dashboard&gt; or &lt;/CallButtons&gt;</td>
</tr>
</tbody>
</table>
Icons

Icon Library

To choose a button from the icon library:

Using the GUI

1. In Advanced Settings select UI Settings > Edit Footer, Edit Dashboard or Edit In-Call > Add.
2. Select the new button. A yellow box appears around the selected button.
3. Touch Edit.
4. Select the check box next to Confirm On Click to enable this (the default is Disabled).
5. In the Description field, enter a short description of the button function.
6. Touch Icon. The Select Icon menu is displayed.
7. From the Library tab, select an icon.
8. Touch BG to set the background color. See Button Background Color on page 97.
9. Touch FG to set the foreground text color. See Button Text Color on page 98.
10. Touch the Back button to return to the WFC Voice Client home screen.

Using XML

<Footer> or <Dashboard> or <CallButtons>

...<Button>
   <title>Dial</title>
   <action>DIAL</action>
   <value></value>
   <enabled>true</enabled>
   <confirm>false</confirm>
   <description>Dial button from library</description>
   <bg_color>#FF001425</bg_color>
   <fg_color>#FFFFFFFF</fg_color>
   <icon>ic_dialpad</icon>
</Button>
...
<Footer> or <Dashboard> or <CallButtons>

Custom Icon Configuration

✓ NOTE: Icons must be 128 pixels by 128 pixels and in PNG format.

The user can create custom icons. To select a custom icon:

1. Connect the device to a host computer using a USB cable.
2. From the host computer, copy the icon file to the WFConnect folder on device.
### Icon Scale Type

- **CENTER_INSIDE**
  Position image in the center area above title. Size of the image will be equal to or less than the size of the button. This is the default scale type.

- **SCALE_CENTER**
  Scale image in the center to fill area above title. Maintain aspect ratio of the image.

- **FILL_CENTER**
  Scale in the center to fill button size (no padding) and maintain the aspect ratio. The title is on top of the image in the center.

- **FILL_XY**
  Scale to fill button size (no padding) in both directions. Does not maintain aspect ratio. The title is on top of the image in the center.

To set the scale type for an icon:

---

Using the GUI

1. In **Advanced Settings** select **UI Settings** > **Edit Footer**, **Edit Dashboard** or **Edit In-Call** > **Add**.
2. Select the new button. A yellow box appears around the selected button.
3. Touch **Edit**.
4. Select the check box next to **Confirm On Click** to enable this (the default is Disabled).
5. In the **Description** field, enter a short description of the button function.
6. Touch **Icon**. The **Select Icon** menu displays.
7. From the **SDCARD** tab, select an icon.
8. Touch **BG** to set the background color. See **Button Background Color** on page 97.
9. Touch **FG** to set the foreground text color. See **Button Text Color** on page 98.
10. Touch the **Back** button to return to the WFC Voice Client home screen.

Using XML

```
<Footer> or <Dashboard> or <CallButtons>
...
<Button>
  <title>Dial</title>
  <action>DIAL</action>
  <value></value>
  <enabled>true</enabled>
  <confirm>false</confirm>
  <description>Dial button from SD card</description>
  <bg_color>#FF001425</bg_color>
  <fg_color>#FFFFFFFF</fg_color>
  <icon>dialbtn.png</icon>
</Button>
...
<Footer> or <Dashboard> or <CallButtons>
```
### Using the GUI

1. In **Advanced Settings** select **UI Settings > Edit Footer, Edit Dashboard or Edit In-Call**
2. Select a button. A yellow box appears around the selected button.
3. Touch **Edit**.
4. In the **Scale** field, select a **Scale Type**.
5. Touch the **Back** button to return to the WFC Voice Client home screen.

### Using XML

```xml
<Footer> or <Dashboard> or <CallButtons>
...
<Button>
    <action>DIAL</action>
    <title>Title</title>
    <value></value>
    <icon>conference</icon>
    <scale>SCALE_CENTER</scale>
</Button>
...
<Footer> or <Dashboard> or <CallButtons>
```
Button Color

**Button Background Color**

Use Button Background Color to set the color of individual buttons. Setting a background color overrides the Global Button Background Color. The default background color is dark gray (#FF001425).

**Figure 31  Button Background Color**

Setting Button Background Color

<table>

Reset Colors to Default

To reapply the factory default button colors:

1. In Advanced Settings select UI Settings > Reset colors to default.
2. Touch the Back button to return to the WFC Voice Client home screen.

Restore Buttons

To reapply the factory default buttons and their layout:

1. In Advanced Settings select UI Settings > Restore buttons.
2. Touch the Back button to return to the WFC Voice Client home screen.
Call Settings

This section provides detailed information on configuring advanced call settings.

To configure call settings:

1. Touch the menu button, then Settings. The password dialog box appears.

Figure 35  WFC Voice Client Menu

2. Enter password (default: zamboni).
3. Touch Enter.

Figure 36  WFC Voice Client Settings Menu

4. Touch Advanced Settings > Call Settings.
### Call Waiting Volume

Set the Call Waiting Volume setting.

<table>
<thead>
<tr>

Speaker on table

Enable Speaker Mode to answer all incoming calls in speaker mode when the device is placed on a horizontal surface, such as a desk.

Using the GUI
1. In Advanced Settings select Call Settings.
2. Select the check box next to Speaker on table to enable this (the default is Disabled).
3. Touch Back to return to the WFC Voice Client home screen.

Using XML

```xml
<WFConnect>
  <Profile>
    <speaker_on_horizontal>false</speaker_on_horizontal>
  </Profile>
  ...
</WFConnect>
```
Call Accept Style

There are various call accept styles on the incoming call screen, such as simple accept and reject buttons, a slider (Gingerbread Android), and Glow Pad buttons (JellyBean Android).

- Accept-Reject - The operator touches one of two buttons to accept or reject an incoming call.
- Slider - The operator swipes one of two buttons across the screen to accept or reject an incoming call.
- Glow Pad - The operator touches a handset symbol to accept or reject an incoming call.

Settings

Auto Answer Mode
Enable Auto Answer Mode to auto-answer all incoming calls.

Using the GUI
1. In Advanced Settings select Call Settings.
2. Select the check box next to Auto Answer Mode to enable (Default: disabled).
3. Touch Back button to return to the WFC Voice Client home screen.

Using XML
<WFConnect>
  <Profile>
    <sip_auto_answer>true</sip_auto_answer>
  </Profile>
</WFConnect>

Incoming Call Voice Announcer
Enable Incoming Call Voice Announcer to announce the number or user name of an incoming call.

Using the GUI
1. In Advanced Settings select Call Settings.
2. Select the check box next to Incoming Call Voice Announcer to enable this (Default: disabled).
3. Touch Back button to return to the WFC Voice Client home screen.

Using XML
<WFConnect>
  <Profile>
    <voice_announcer_check>true</voice_announcer_check>
  </Profile>
</WFConnect>

No Audio Cutoff
Use No Audio Cutoff to disconnect a call when no audio is detected for a set interval.

Using the GUI
1. In Advanced Settings select Call Settings.
2. Touch No Audio Cutoff.
3. Select a time interval (Default: 30 seconds).
4. Touch Back button to return to the WFC Voice Client home screen.

Using XML
<WFConnect>
  <Profile>
    <no_audio_cutoff>30</no_audio_cutoff>
  </Profile>
</WFConnect>

Audio Prompt File
Use Audio Prompt File to select a custom WAV audio file to play when an incoming call is accepted. To select a custom WAV audio file:
1. Save a custom WAV audio file using the following settings: 8 kHz sample rate, Mono, 16-bit, PCM format.
2. Connect the device to a host computer using a USB cable.
3. From the host computer, copy the WAV file to the WFConnect folder on device.

### MOH Enabled

Music on Hold (MOH) Enabled plays a WAV audio file when a user is placed on hold.

Using the GUI

| 1. In Advanced Settings select Call Settings.  
2. Select the check box next to MOH Enabled to enable this (Default: disabled).  
3. Touch Back button to return to the WFC Voice Client home screen. |

Using XML

| Using XML  
|<WFConnect>  
|<Profile>  
|  
|<moh_enabled>true</moh_enabled>  
</Profile>  
|<moh_file>opusno1.wav</moh_file>  
</WFConnect> |

### MOH File

Use Music on Hold (MOH) File to select a custom WAV audio file to play when a user is placed on hold. To select a custom WAV audio file:

1. Connect the device to a host computer using a USB cable.
2. From the host computer, copy the WAV file to the WFConnect folder on device.
Ringtones

This section provides detailed information on configuring advanced ringtone settings.

To configure ringtone settings:
1. Touch the menu button, then Settings. The password dialog box appears.
2. Enter password (default: zamboni).
3. Touch Enter.
4. Touch Ringtones.

Line Ringtones

Line Ringtones configures a unique ring tone per line. Custom ring tones are available if preloaded on the device. Supported audio formats for custom ring tones are OGG, MP3, and WAV.

✓ NOTE: MP3 and WAV formats are not supported on some earlier releases of WFC Voice.

Avaya Alerts

Avaya Alerts configures a unique ring tone for some advanced features. Custom ring tones are available if preloaded on the device.

Using the GUI

1. In **Advanced Settings**, select **Ringtones**.
2. Touch **Avaya Alerts**.
3. Select a feature for which to configure the ringtone.
4. To select the default ringtone, touch **Default**.
5. To select an **Android** ringtone:
   a. Touch **Android**.
   b. Select a ringtone.
   c. Touch **OK**.
6. To select a ringtone from **Library**:
   a. Touch **Library**.
   b. Select a ringtone.
7. To select a ringtone on the SD card:
   a. Touch **SDCARD**.
   b. Select a ringtone.
8. Touch **Back** to return to the WFC Voice Client home screen.

Using XML

```xml
<WFConnect>
  <Profile>
    <ringtone_intercome>French_Phone</ringtone_intercome>
    <ringtone_external>HI_UK_Phone</ringtone_external>
    <ringtone_park>HI_UK_Phone</ringtone_park>
    <ringtone_priority>Candlestick</ringtone_priority>
    <ringtone_callback>UK_Phone</ringtone_callback>
  </Profile>
</WFConnect>
```
Miscellaneous Settings

This section provides information on the location of help files, flexible TLS, and editing the settings password.

Sign OUT in Charger

By default, the WFC Voice Client remains signed in when using a cable or cradle to charge the device. Enable this option to automatically sign out of the WFC Voice Client when the device begins charging.

Setting Sign OUT in Charger

<table>
<thead>
<tr>
<th>Using the GUI</th>

</tr>
<tr>
<td></td>
<td>...</td>
</tr>
<tr>
<td></td>
<td>&lt;/WFConnect&gt;</td>
</tr>
</tbody>
</table>

Help URL

The location of the on-device help file.

Setting Help URL

<table>
<thead>
<tr>
<th>Using the GUI</th>
<th>Using XML</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Select <strong>Settings</strong>.</td>
<td>Using XML</td>
</tr>
<tr>
<td>2. Select <strong>Advanced Settings &gt; Miscellaneous Settings</strong>.</td>
<td>&lt;WFConnect&gt;</td>
</tr>
<tr>
<td>3. Select <strong>Help URL</strong>.</td>
<td>&lt;Profile&gt;</td>
</tr>
</tbody>
</table>
| 4. Set HELP URL location.                                                   |     <help_url>file:///wfconnect/help.htm
| 5. Touch **OK**.                                                            |     l</help_url>              |
| 6. Touch **Back** button to get back to WFC Voice Client home screen.       |     </Profile>                 |
|                                                                            |     ...                        |
|                                                                            |     </WFConnect>               |

Settings Password

The WFC Voice Client uses a password to access the settings.

**NOTE:** Once the password is changed if it is forgotten the only recovery method is to reload a new client with a new xml file. The password cannot be set in the XML file.

To change the settings password:

1. Select **Settings**.
2. Select **Advanced Settings > Miscellaneous Settings**.
3. Select **Settings password**.
4. Enter Current Password.
5. Enter New Password and Confirm.
6. Touch **Enter**.

Touch **Back** button to get back to WFC Voice Client home screen.
Additional Profile URI

Set the URI of a buttons layout file saved as an XML file on a remote or local server.

Setting Additional Profile URI

Using the GUI
1. Select Settings.
2. Select Advanced Settings > Miscellaneous Settings.
3. Select Additional Profile URI.
4. Set Additional Profile URI location.
5. Touch OK.
6. Touch Back button to get back to WFC Voice Client home screen.

Using XML
<WFConnect>
  <Profile>
    <layout_location>file:///wfconnect/buttons-layout.xml</layout_location>
  </Profile>
... 
</WFConnect>

Contacts URL

The URL of a contacts list saved as a CSV file on a remote or local server. For information on creating a contacts list see Creating a Contacts List on page 114.

Setting Contacts URL

Using the GUI
1. Select Settings.
2. Select Advanced Settings > Miscellaneous Settings.
3. Select Contacts URL.
4. Set CONTACTS URL location.
5. Touch OK.
6. Touch Back button to get back to WFC Voice Client home screen.

Using XML
<WFConnect>
  <Profile>
    <contacts_url>file:///wfconnect/contacts.csv</contacts_url>
  </Profile>
... 
</WFConnect>

Sync Contacts

Use Sync Contacts to import a contacts list saved as a CSV file.

Creating a Contacts List

1. From the host computer, use a spreadsheet program to create a list of contacts where the first row contains the following fields:
   contactId   firstName   lastName   cellNumber   officeNumber   homeNumber
2. Enter contact information as needed. For example:
   contactId   firstName   lastName   cellNumber   officeNumber   homeNumber
   1           John        Smith      2001         516-555-1234   516-555-1235
   2           Jane        Doe        2002         516-555-1236   516-555-1237
3. Save the spreadsheet as a CSV file.

**Syncing Contacts**

1. From the host computer, copy the CSV file to the WFConnect folder on device.
2. From the WFC Voice Client, select **Settings > Advanced Setting > Miscellaneous Settings**.
3. Touch **Sync Contacts**. A confirmation that the contacts are updated displays.
Introduction

This chapter describes the process used to capture and collect WFC Voice Client log files and Fusion log files. The Log Marker feature records the date and time of an event into a log file. Log files are used to assist in troubleshooting the WFC Voice environment during run-time operations.

NOTE: For accurate logging, check that the device date and time are set correctly.

Logging Level

- **Error** - Low level application error - not critical
- **Warning** - Feedback from application operation and function
- **Info** - High level / user interaction and call information
- **Debug** - Captures information for developer troubleshooting
- **Verbose** - Captures all information for developer troubleshooting.

Setting Logging Level

<table>
<thead>
<tr>
<th>Using the GUI</th>
<th>Using XML</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Select <strong>Settings</strong>.</td>
<td><code>&lt;WFConnect&gt;</code></td>
</tr>

<td><code>&lt;Profile&gt;</code></td>
</tr>
<tr>
<td>3. Select <strong>Logging level</strong>.</td>
<td><code>&lt;log_level&gt;Error&lt;/log_level&gt;</code></td>
</tr>
<tr>
<td>4. Choose a level for Logging. Default level “Error” is suggested.</td>
<td><code>&lt;Profile&gt;</code></td>
</tr>
<tr>
<td>5. Touch <strong>Back</strong> button to get back to WFC Voice Client home screen.</td>
<td>...</td>
</tr>
<tr>
<td></td>
<td><code>/WFConnect&gt;</code></td>
</tr>
</tbody>
</table>
Logging Types

There are several types of logging within the WFC Voice Client as well as the native Android OS.

Logging to Console

Information sent to the In-Call dashboard for live viewing.

<table>
<thead>
<tr>
<th>Using the GUI</th>
<th>Using XML</th>
</tr>
</thead>
</table>
| 1. Select **Settings**.  
2. Select **Advanced Settings > Logging**.  
3. Select **Logging to Console**.  
4. Touch the box to enable Logging to Console.  
5. Touch **Back** button to get back to WFC Voice Client home screen. |  
|  | <WFConnect>  
|  | <Profile>  
|  |   <log_console>false</log_console>  
|  | </Profile>  
|  | ...  
|  | </WFConnect> |

Logging to File

Log information is written to a file on the device.

<table>
<thead>
<tr>
<th>Using the GUI</th>
<th>Using XML</th>
</tr>
</thead>
</table>
| 1. Select **Settings**.  
2. Select **Advanced Settings > Logging**.  
3. Select **Logging to File**.  
4. Touch the box to enable Logging to File. The file is saved in the WFConnect folder.  
5. Touch **Back** button to get back to WFC Voice Client home screen. |  
|  | <WFConnect>  
|  | <Profile>  
|  |   <log_console>false</log_console>  
|  | </Profile>  
|  | ...  
|  | </WFConnect> |

Logging to HTTP Post URL

Post the log file to a server when client starts and daily after midnight.

<table>
<thead>
<tr>
<th>Using the GUI</th>
<th>Using XML</th>
</tr>
</thead>
</table>
| 1. Select **Settings**.  
2. Select **Advanced Settings > Logging**.  
3. Select **HTTP POST URL**.  
4. Enter the server address to send log file to. Set URL value to empty string to disable it.  
5. Touch **OK**.  
6. Touch **Back** button to get back to WFC Voice Client home screen. |  
|  | <WFConnect>  
|  | <Profile>  
|  |   <post_log_url></post_log_url>  
|  | </Profile>  
|  | ...  
|  | </WFConnect> |
Log Files

Two types of log files can be collected:

- Workforce Connect Logs
- Fusion Logs

Workforce Connect Logs

The WFC Voice Client has the following logging methods:

- **Android LogCat** - LogCat provides a mechanism for collecting and viewing system and applications messages. RxLogger tool is used to collect this file. When RxLogger is started, the WFC Voice Client automatically logs all messages into LogCat at the VERBOSE level.

- **Session Initiation Protocol Common Log Format (SIPCLF)** - All received and sent SIP messages are contained in CLF format as single text line. Special software is required to read this file format. This logging method is disabled by default.

  SIPCLF files can be found in the following location:
  ...

- **Crash Report** - WFC Voice automatically stores up to ten crash report files on the device. This logging method is always enabled.

  Crash report files can be found in the following location:
  ...

Fusion Logs

The native Android operating system provides an advanced logging feature. Fusion Logs collect unencrypted data, including Real-time Transport Protocol data. The data is imported to third party software for network troubleshooting and protocol analysis. The captured data is output to a .pcap file and an event log.

Collecting LogCat with RxLogger

The RxLogger tool integrates into the operating system and collects WFC Voice Client log files. There is no need to set the log level inside WFC Voice Client. When Rxlogger logging starts, WFC Voice Client is notified via plugin to enable VERBOSE LogCat and SIPCLF logging. By default, SIPCLF is disabled.

Enabling RXLogger

From the RxLogger main screen:
• Touch Start to enable logging
• Touch Stop to disable logging.

WFC Voice logging is automatically enabled when RxLogger logging is enabled. The LogCat file is saved to the location specified in the RXLogger configuration.

Users can customize WFC Voice logging in the RxLogger configurations.
NOTE: LogCat sets the VERBOSE level in WFC Voice Client. When RxLogger starts, it overwrites the setting level to VERBOSE. When using RxLogger, the WFC Voice Client logging is disable and all logging is posted through RxLogger.

Log Marker

Log markers are used to mark specific locations in the LogCat file, identifying when an event occurs. The Log Marker feature can be used as many times as necessary. The follow example displays a Log Marker entry in LogCat.

```
08-24 16:59:09.953: E/UI(4587): <<<MARKER>>>
```

Adding a Log Marker

From the WFC Voice main screen:

1. Touch the Menu button.
2. Touch Add Log Marker.
3. Enter an optional description.
4. Touch SET.

Configuring Log Marker

The Log Marker feature is accessed only by the WFC Voice Client main screen by default. To provide access elsewhere in the client, create a customized button. For example, when troubleshooting in-call errors, a Log Marker button is added to the In-Call buttons.

To configure a custom Log Marker button, see Log Marker on page 70.

NOTE: When a custom Log Marker button is used, the optional description is not available.

Fusion Logs

Fusion Logs are enabled in Wi-Fi settings.

After Fusion Logs are set, run the WFC Voice Client. When events occur they are captured in the location set in Advanced Logging.

NOTE: Powering off the device will delete the collected fusion logs.
Enabling Fusion Settings In Android 6 or 7

1. Touch All Apps > Settings > Wi-Fi.
2. Touch the menu button.
3. Touch Advanced.
4. In the Logging section touch Advanced Logging.
5. Ensure the Enable Logging check box is selected. The user can only change the log file location when Advanced Logging is disabled.

Enabling Fusion Settings In Android 8 or Later

1. Touch All Apps > Settings > Network & internet > Wi-Fi > Wi-Fi preferences > Advanced > Additional Settings.
2. In the Logging section touch Advanced Logging.
3. Ensure the Enable Logging check box is selected. The user can only change the log file location when Advanced Logging is disabled.

Capturing the Logs

Accurate logging is necessary for effective troubleshooting. Check that the device date and time are set correctly.

1. Connect the device to the host computer using a USB cable.
2. Copy log files to the computer.
3. Ensure log files were set up correctly and captured relevant data.
4. Identify Log Marker events by date and time stamps.

✓ NOTE: It is recommended to delete and recapture inaccurate log files.
Introduction

WFC Voice Client is configurable as a background service allowing third party applications to manage voice calls via remote service or plug-in. In Headless Mode, WFC Voice Client runs without showing the main dashboard screen, and launches the dialer instead. Touching the header section launches the settings screen of the third party application. All other screens and functions are the same as default mode.

The WFCVoice Service is a plug-in allowing another application to remotely manage voice calls using WFC Voice Client Headless Mode. The plug-in is a small library (WFCVoiceConnector.jar) providing an interface between WFC Voice Client and another android client. Third party applications use custom UI screens to control voice calls, or existing WFC Voice Client In-Call screens for advanced features.

The figure below illustrates WFC Voice Client communicating with third party applications using the WFCVoice Service plug-in.

Figure 40  WFCVoice Service
Integrating WFCVoice Service Plug-in

1. Add WFCVoiceConnector.jar file as a library in the project
2. Declare a WFCVoiceConnector object in the activity
3. Initialize it inside onStart() method

When the WFCVoiceConnector object is created, it automatically registers with WFCVoice Service. To unregister, call WFCVoiceConnector.disconnect() method inside onStop() in your activity.

WFCVoice Service plug-in allows applications to send commands to WFC Voice Client, and receive notifications about service or call state changes. See WFCVoiceConnector class for a list of all available commands. The ConnectorCallback sends voice and call status notifications from WFC Voice Client. Third party applications implement ConnectorCallback and pass it to a WFCVoiceConnector object during initialization.

For more information, refer to the Java Documentation for Service Plugin provided with the source code bundle.

Enabling Headless Mode

Using the GUI
1. Open Settings.
2. Select Advanced Settings > UI Settings
3. Select Headless Mode
4. Select Back to return to the WFC Voice Client home screen.

Using XML
<WFConnect>
  <Profile>
    <headless_mode>true</headless_mode>
  </Profile>
  ...
</WFConnect>

Initiating a Call

To initiate a call third party applications can use the following intents with a tel, sip, or csip data scheme:

- android.intent.action.CALL
- android.intent.action.DIAL
- android.intent.action.VIEWS

For example, to initiate a call to extension 2001 using ADB:

$ adb shell am start -a android.intent.action.CALL -d sip:2001
$ adb shell am start -a android.intent.action.VIEW -d csip:2001
Reporting App State

The WFC Voice Client broadcasts its status to a third party app using the following intent:

- **Action**: `wfc.voice.PHONE_STATE`
- **Extras**:
  - `registration_state`: ACTIVE|ACTIVE_DND|CONNECTING|INACTIVE
  - `state`: IDLE|CALLING|RINGING|ACTIVE
  - `number`: the phone number for the current session (optional, reported when voice call state changes)
  - `line_id`: the line number (optional, reported when one of the line registers)
  - `line_extension`: the line extension (optional, reported when one of the line registers)
  - `line_registered`: true/false (optional, reported when one of the line registers)

Where: `registration_state` is PBX registration state, and `state` is a voice call state.

The following code example calls `wfc.voice.PHONE_STATE` from a third party app.

```java
// create broadcast receiver
BroadcastReceiver mMessageReceiver = new BroadcastReceiver() {
    @Override
    public void onReceive(Context context, Intent intent) {
        Log.i(TAG,
            "Received PHONE_STATE from WFCVoice " +
            " registration_state=" + intent.getStringExtra("registration_state") +
            " call state=" + intent.getStringExtra("state") +
            " number=" + intent.getStringExtra("number") +
            " line_id=" + intent.getStringExtra("line_id") +
            " line_extension=" + intent.getStringExtra("line_extension") +
            " line_registered=" + intent.getBooleanExtra("line_registered", false));
    }
};

// register broadcast receiver in the Activity
IntentFilter mMessageReceiver = new IntentFilter();
requestFilter.addAction("wfc.voice.PHONE_STATE");
registerReceiver(mMessageReceiver, requestFilter);
```
WFCDemo Android Project

WFCDemo is a sample android application for demonstrating WFCVoice Service integration. It allows user to initiate and control a new voice call remotely in the WFC Voice Client.

The following figures illustrate accepting and controlling an incoming call in the WFCDemo application.

Figure 41  WFCDemo Idle State

In Figure 41, WFCDemo is in an idle state displaying WFC Voice Client status in the blue box.
In Figure 42, the application plays a custom ring tone and the user selects:

- Accept
- Reject
- More, to display the WFCVoice incoming screen.

Figure 43  Active Call
In Figure 43, the WFCDemo screen controlling a call (end, speaker, mute). Selecting More accesses advanced controls by displaying the WFCVoice In-Call screen, shown in Figure 44.

**Figure 44**  WFCVoice In-Call Screen
Introduction

The WFC Voice Client improves the effectiveness of communications within an organization, providing enterprise voice communications across multiple media types on unified mobile devices.

With WFC Voice Client you can:

- Use a rich selection of features on configured wireless devices
- Seamlessly communicate with co-workers or take an outside call from a customer or vendor
- Use the device most appropriate and convenient for each situation.

NOTE: This guide covers default button icons, which the system administrator can modify.

NOTE: For more information on WFC Voice Client features, refer to the Avaya Aura® Communication Manager Feature Description and Implementation document.

This chapter explains how to use the following functions and features:

- Home Screen Dashboard on page 130
- In-Call Dashboard on page 130
- Signal Quality on page 131
- Calling on page 131
  - Call Hold and Resume on page 137
  - Call Park and Unpark on page 137
- Voicemail on page 141
  - Message Waiting on page 141
  - Message Retrieval on page 141
- Contacts on page 142
- Call Log / Call History on page 144
- Advanced Calling Features on page 146
  - Multiple Lines on page 146
    - Bridged Call Appearance, see page 11-146
    - Multiple Line Appearances on page 147
Using the Client

- Busy Indicator on page 147
- Transfer (attended, semi-attended) on page 148
- Ad hoc Conference on page 149
- Call Forward (All, Busy / No Answer, Disable) on page 151

Signal Quality

During an active call, the signal quality indicator appears in the upper right portion of the screen, indicating voice traffic errors on the network.

- excellent
- good
- acceptable
- bad

Figure 47  Signal Quality Indicator

Calling

Making a Call

There are various ways to initiate a telephone call:

- Touch to enter a specified extension or phone number, and then touch to initiate a call.
• Touch ☻ to display a list of previous calls. See Call Log / Call History on page 144 for more information.

• Touch ☀️ to display a list of saved contacts. See Contacts on page 142 for more information.

• Touch ⭐ to display a list of favorite contacts. See Contacts on page 142 for more information.

• Touch 📞 to initiate a call to the most recently dialed location.

• Touch ✆ to initiate a call to a number preset by the system administrator

For information on initiating a call using a third party app, see Headless Mode and WFCVoice Service.
Receiving a Call

The incoming screen offers various call accept styles, such as accept and reject buttons, a slider, and Glow Pad buttons.

**NOTE:** Available ring tones vary. Use the device system settings to set tones and vibration notification.

### Figure 49  Call Accept Buttons

**Accept-Reject Buttons**

Touch one of two buttons to accept or reject an incoming call.

**Sliding Tab**

Swipe one of two buttons across the screen to accept or reject an incoming call.

**Glow Pad**

Touch a handset symbol to accept or reject an incoming call.

### Popup Window

During an active call, a popup window appears when an incoming call is received. Touch one of two buttons to accept or reject an incoming call.

**NOTE:** When an incoming call is through a wide area network (WAN), the WFC Voice Client call is placed on hold. If the WAN call is accepted, the WFC Voice Client call remains on hold. To resume the WFC Voice Client call, open the WFC Voice Client and touch .
End Call

The End Call feature ends a call in any state.

Add Call

During an active call the **Add Call** button dials a preset number or opens the dialer. This places the current call on hold while initiating the new call. When the new call connects, you can Transfer, Conference, or End the second call and resume the first call.
Figure 52  Add Call Button

Touch + to display the dial pad.

Figure 53  Add Call Dialer

Enter the new number and touch .
Figure 54  Added Call

The first call is on hold with the option to resume and the new number becomes the active call. To resume the first call, touch the extension.
Call Hold and Resume

Use the Hold feature to temporarily disconnect a call, use the telephone for another call, and then use Resume to return to the original call. For information on setting up the Hold and Resume buttons, see Hold on page 81 and Resume on page 82.

Figure 55  Hold Button

Touch \[\text{Hold} \] to display the Hold screen.

Figure 56  Hold Screen

Touch \[\text{Resume} \] to resume the call.

Call Park and Unpark

Call Park

Use the Call Park/Unpark feature to put a call on hold and then retrieve that call from any other telephone within the system.
Using the Client

Figure 57  Park Button

Touch P to display the Park screen.

Figure 58  Park Screen

Call Unpark

Unpark a call so anyone capable of retrieving the parked call can continue speaking with the caller on any phone. The method for retrieving a parked call varies depending on who is unparking the call.

Call Originator

To unpark a call placed by the call originator touch Unpark [parked extension].
Other Users

To unpark a call placed by someone other than the call originator touch **Unpark** button.
Figure 61 Call Originator Unpark

1. Enter the extension for the [call originator].
2. Touch OK.
Voicemail

Use the Message Retrieval feature to retrieve voice messages from the voice mail server. For information on configuring the Voicemail button, see Voicemail on page 77.

**NOTE:** To configure Voicemail go to Settings>Advanced Settings>Connection Parameters>HTTPS Server Address and enter the utility server IP address. For more information, see Setting the Utility Server IP Address on page 23.

Voicemail messages appear for each line/extension next to the extension number.

**Figure 62** Voicemail Messages

Touch to call the user’s Voicemail box and display a list of received Voicemail.

Message Waiting

The Message Waiting feature provides notifications of messages waiting. The extension and associated voice messages appear in a bar on the main screen.

Message Retrieval

Use the Message Retrieval feature to retrieve voice messages from the voice mail server. Voice messages can also be retrieved by pressing the Message Waiting bar or the Voicemail button.
Contacts

Use the Contacts feature to store and dial frequently used numbers. See Contacts on page 75 for information on how to create the Contact button.

✓ **NOTE:** Add and edit contacts from the native Android operating system. Refer to the Android guide for more information.

Touch the default **Contacts** button to display a list of saved contacts.

**Figure 63  Contact List**

Touch a contact number to call that contact.
Favorites

Use the Favorites feature to store and dial contacts that are set as favorites. See Favorites on page 76 for information on how to create the Favorites button.

✓ **NOTE:** Set contacts as favorites from the native Android operating system. Refer to the Android guide for more information.

Touch the default **Contacts** button ⚽️, and select the **Favorites** tab ⭐️ to display a list of favorite contacts.

**Figure 64**  Contact List

Saved Contacts

Touch a contact number to call that contact.
Call Log / Call History

**View Recent Calls**

This feature records missed, answered, and outgoing calls in the call history log. Use this log to initiate a call, delete an entry, or view details of an entry. This feature is referred to as Call Log in the Avaya Aura PBX and as Call History in the WFC Voice Application.

For information on configuring the Call History button, see History on page 74.

Touch the **History** button to view the call history screen.

**Figure 65** Call History

- **Dial Pad**
- **Contacts**
- **Missed Call**
- **Placed Call**
- **Received Call**

Touch a call history button to see the call detail, which includes the caller ID, extension, call type, time, date and duration.

**Dial from Call History**

Touch the **Call** button next to a recent call.

**Delete Call History**

Touch the **Menu** button, then Clear all recent calls.

**View Call History**

History lists recently called numbers and incoming calls, including missed calls.

Touch **History** to display a list of previous calls.
Figure 66  Recent Call List
Advanced Calling Features

Multiple Lines

The WFC Voice Client supports and displays a presence icon displayed to the left of each line. The shape, color, and animation of the icon indicates its type and status. Table 2 lists presence icon combinations.

Table 2  Presence Icon Description

<table>
<thead>
<tr>
<th>Icon Status</th>
<th>Dedicated Line</th>
<th>Shared Line</th>
</tr>

<td></td>
<td></td>
</tr>
</tbody>
</table>

Figure 67  Multiple Extensions

Bridged Call Appearance

This feature gives single-line and multi-line telephones the appearance of the telephone number which is assigned to another user. Use Bridged Call Appearance to originate, answer, and bridge onto calls to or from the telephone number of another user. The phone receiving the bridged appearance is referred to as the principal station, while the bridged line is the telephone associated with the bridged appearance.

Use Bridged Call Appearance when:
• Assigning bridged appearances for the principal station
• The user of the principal station joins a previously existing call involving a bridged line
• The user of the bridged line joins a previously existing call involving the principal station
• The user of the principal station retrieves a call placed on hold by a bridged line
• The user of a bridged line retrieves a call placed on hold by the principal

**Multiple Line Appearances**

Use the Multiple Line Appearances feature to associate and use multiple lines with a device. Avaya Aura documentation refers to this as a multi-appearance telephone. Configure multiple lines in the PBX.

**Busy Indicator**

The WFC Voice Client supports Busy indicators for multiple extension configurations. An icon is associated with each extension indicating if the line is idle, active, on hold, or busy. See Presence Icon Description on page 146.
Transfer (attended, semi-attended)

The Transfer feature transfers an active call to a third party. While Call Forwarding must be pre-configured, use Call Transfer to make call exchanges in real-time with an active call. To set up the Transfer button, see Transfer on page 83.

There are two types of transfer:

- Attended - The transferring party does not complete the transfer (i.e. remains on the call) until the transferred-to party answers.
- Semi-attended - The transferring party completes the transfer (i.e. drops the call) while the transferred-to party is still ringing.

**Figure 68** Transfer Button

1. Touch 🔗 to display the dial screen.

**Figure 69** Transfer Dialer

2. Dial the number and touch ☎️.
Using the Client

Figure 70  Transferring Call

3. Touch Complete Transfer to complete the call transfer.

Figure 71  Complete Transfer

Ad hoc Conference

Use this feature to create a conference without the assistance of an attendant and with up to six participants. The Conference feature joins two separate calls for collaboration between each party on the line at the same time. To set up the Conference button, see Conference on page 84.
1. Touch 🔄 to dial the conference number.

2. Enter a number and touch ✆.
3. Touch the **Conference Complete** button to join the completed conference call.

### Figure 74  Conference Complete Button

### Figure 75  Conference Screen

### Call Forward (All, Busy / No Answer, Disable)

Use this feature to redirect calls to an Internal extension, Off-network number, or Attendant group. You can set up Call Forward separately for Call Forward All (also referred to as Call Forward Unconditional) and Call Forward Busy / No Answer (also referred to as Call Forward Busy / Don't Answer).

*NOTE:* The Avaya Aura PBX also supports Call Forwarding Override and Call Forwarding Off-net. The WFC Voice Client does not support Call Forward Override. Call Forwarding Off-net is an infrastructure feature which doesn't require support from the WFC Voice Client.

To enable Call Forward All or Call Forward Busy:
1. Touch the **Forward All** or **Forward Busy** button.

2. Enter a number.

3. Touch **ENABLE**. The Call Forward number displays in the header.
Disabling or Changing Call Forward

To disable or change the Call Forward All or Call Forward Busy feature touch the **Forward All** or **Forward Busy** button 📞. The **Call Forward** or **Call Forward Busy** popup window appears.

**Disable Call Forward**

To disable the Call Forward feature, touch **DISABLE**.

**Change Call Forward**

To enter a different Call Forward number, touch **CHANGE**.
Enter the new call forwarding number and touch **CHANGE**. The new call forwarding number appears in the header and the Android notification bar.
Figure 83  Call Forward Number Changed
Miscellaneous Features

Ringtone

By default, the WFC Voice Client uses the ringtone configured in the native Android settings.

Touch the Menu button, then **Ringtone** to change the default ringtone for the WFC Voice Client.

Reload

Touch the Menu button, then **Reload** to sign out and then automatically sign back in to the WFC Voice Client.

Sign Out

Touch the Menu button, then **Sign Out** to sign out of the WFC Voice Client. To sign back in to the WFC Voice Client, touch **Sign In**.

After signing out, touch the Menu button, then **Quit**, to exit the WFC Voice Client.

Speed Dial Numbers

Speed Dial places a call to a preset number or extension. Up to 10 speed dial buttons are available. The system administrator configures speed dial numbers.

Touch the **Speed Dial** button 📞 to make a call using the preset destination.

**Figure 84**  Dialer Screen - Speed Dial
Suspend Mode

Suspend Mode blocks all incoming or outgoing calls.

Touch the Suspend Mode button to enable or disable Suspend Mode.

Figure 85  Suspend Mode

List

List displays a speed dial list by default.

IMPORTANT: List is configured by the system administrator.

Touch the default List button to display the speed dial list.

Figure 86  Speed Dial List
Home

During an active call touch \( \text{🏠} \) to display the Dashboard and access to Dashboard functions.

**Figure 87  Dashboard**

Exclusion (Automatic and Manual)

Use the Exclusion feature to maintain privacy of conversations and ensure that unwanted parties cannot join the call. To administer Exclusion on an endpoint, use either Manual Exclusion, Automatic Exclusion and Buttonless Automatic Exclusion.

To use the Exclusion feature, touch the **Exclusion** button during an active call.

**Figure 88  Exclusion Button**

Users attempting to join the call receive an error message.
Touch the **Exclusion** button again to turn off the Exclusion feature.

### Call Pickup

Use the Call Pickup feature to answer calls for devices belonging to the same pickup group. The Call Pickup feature requires that users are defined in advanced and are members of the same pickup group.

There are two Call Pickup variations which provide enhanced functionality above the basic Call Pickup:

- **Directed Call Pickup** - This enables users to specify which device they want to answer. Pickup groups are not needed with Directed Call Pickup. You must first administer Directed Call Pickup before anyone can use this capability. See Using Call Pickup on page 160, for more information.

- **Extended Call Pickup** - This enables users in one pickup group can answer the call for users in another pickup group. See Using Extended Call Pickup on page 161, for more information.

To configure Call Pickup, Directed Call Pickup, and Extended Call Pickup, see Communication Manager Endpoint Configuration on page 20.

### Using Call Pickup

When a call is placed to a device in a Call Pickup group, the **Call Pickup** button flashes on each device in that pickup group and sounds an alert. Anyone in that pickup group may answer the call by touching the **Call Pickup** button.

#### Using Directed Call Pickup

To answer a call using Directed Call Pickup:
Figure 91  Directed Pickup

1. Touch Directed Pickup.

Figure 92  Directed Pickup Dialer

2. Enter the extension of a device that is ringing.

3. Touch to answer the call on the ringing device.

Using Extended Call Pickup

To answer a call using Extended Pickup:
1. Touch **Extended Pickup**.

2. Enter the pickup group number for the device that is ringing.

3. Touch ✆ to answer the call on the ringing device.

**Adjusting the Ring Volume**

Configure using the device’s sound settings. Refer to the MC40, TC70 or TC75 User Guide at [www.zebra.com/support](http://www.zebra.com/support) for more information.

**Unique Ringtone per Line Appearance**

To configure ringtones per line, see Line Ringtones on page 110.

**Avaya Alerts**

To configure ringtones for some advanced features, see Avaya Alerts on page 111.
Using the Client

Unique Ringtone per Contact
Configure using the device’s sound settings. Refer to the device User Guide at www.zebra.com/support for more information.

Distinctive Ringing
Use the Distinctive Ringing feature to distinguish between incoming call types based on the ringing pattern of the call. For example, internal versus external calls.

Vibrate/Ring Tone
Configure using the device’s sound settings. Refer to the MC40, TC70 or TC75 User Guide at www.zebra.com/support for more information.

Start Application
WFC Voice Client can be configured by a system administrator to launch another application on the device. When the button is pressed WFC Voice Client minimizes to run in the background and the application launches.

Touch the application button to launch another application.

Log Marker
Log Marker creates a time stamp in the logs. If you experience any issues with WFC Voice Client functionality, the time stamp focuses troubleshooting of the device to the time the issue occurred for more rapid resolution.

Adding a Log Marker
From the WFC Voice main screen:
1. Touch the Menu button.
2. Touch Add Log Marker.
3. Enter an optional description.
4. Touch SET.

Caller ID
The Caller ID feature displays calling party information on your display telephone that is signaled over ISDN or H.323 trunks. Refer to the WFC Voice Quick Start Guide and the Avaya Aura® Communication Manager Feature Description and Implementation document for more information on setting up and using this feature.

Hold Recall
Use Hold Recall to be notified when a call is on hold too long, based on the Hold Recall Timer. Visual and audible warnings are sent to the telephone when a call has been on hold past a specified period of time. Both visual and audible warnings are used if the telephone is on-hook. If the telephone is off-hook, a “priority ring” is used.

On-hook Dialing
On-hook dialing enables the user to pre-dial digits before going off-hook, or pressing the send key. The WFC Voice client provides this capability automatically and does not go off-hook until the send key is pressed.
Account Codes

Account Codes allow identification of which calls are associated with a specific account. The Account code is provided by the user by dialing the account code Feature Access Code, dialing the destination digits and then touching the Call button. The PBX recognizes the Feature Access Code as an account code.

Automatic Call back

Using the Automatic Callback (ACB) feature, internal users who place a call to a busy or an unanswered internal telephone can be called back when the called telephone becomes available.

Group Paging

Use the Group Paging feature to make an announcement over a group of digital speaker phones. Up to 32 paging groups can be created on one media server. Each group can consist of up to 32 extensions. The same extension can be assigned to different groups. For more information, refer to the Avaya Aura® Communication Manager Feature Description and Implementation document.

Multiple Device Access

With the Multi-Device Access (MDA) feature, a SIP user can register up to 10 SIP devices with a single extension. Users can receive and place calls at multiple devices, and move calls between devices. For more information, refer to the Avaya Aura® Multi Device Access White Paper.

Priority Calling

Use the Priority Calling feature to provide a special type of call alerting between internal telephone users, including the attendant. The called party hears a distinctive ringing when the calling party uses Priority Calling. There is no Priority Calling feature button for the WFC Voice Client. The feature is accessed using a Feature Access Code.
### Button Actions

false: AGC is not used.  
Default: false                                                     |
| use_agc_speaker          | Automatic Gain Control (AGC) on speaker. (Optional).                       | true: AGC is used.  
false: AGC is not used.  
Default: false                                                     |
| use_native_sample_rate   | Use the native sample rate set by Android (Optional).                       | true: Android native sample rate is used  
false: Sample rate is 8000  
Default: false                                                     |
| use_noise                | Noise Reduction (Optional).                                                 | true: Noise reduction is used.  
false: Noise reduction is not used.  
Use native sample rate set by Android.                              |
| use_prox_wake_lock       | Use the Android platform default proximity WAKE LOCK (Optional).            | true: Uses the Android platform default proximity WAKE LOCK.  
false: Uses a workaround solution.  
Default: true                                                       |
| var_location             | The URI of shared profile located on a remote or local server (Optional).   | Protocols: file, http, https, tftp.  
Default: none (Disabled)                                              |
| vibrate_when_ringing     | The device vibrates when a call is received (Optional).                    | true: The device vibrates when a call is received.  
false: The device does not vibrate when a call is received.  
Default: false                                                     |

Configuring a Proxy Server

To activate the WFC Voice Client, one or more licenses must be retrieved from one of the following types of license sources:

- Local license server
- Cloud license server.

A proxy server is required when using a device that does not have direct access to the license source. For example, when a device is connected to a local network.

Figure 95  Proxy Server Configuration

To configure a proxy server:

1. Ensure the proxy server and DNS server are running.
2. Ensure the device running the WFC Voice Client is connected to the DNS server.
3. In the DNS server, change the DNS information to resolve the licensing server domain to the proxy server. The default license server domain is: zebra-licensing.flexnetoperations.com.
4. In the proxy server, allow internet traffic on port 443.
Network Ports and Protocols

This section provides an overview of the ports and protocols the WFC Voice Client uses on supported Zebra devices.

Zebra devices may contain applications that use the same ports and protocols for normal operation as the WFC Voice Client. Refer to the application documentation for more information.

Table 9  Ports for Advanced Features

<table>
<thead>
<tr>
