Proprietary Statement

This manual contains proprietary information of Zebra Technologies Corporation and its subsidiaries (“Zebra Technologies”). It is intended solely for the information and use of parties operating and maintaining the equipment described herein. Such proprietary information may not be used, reproduced, or disclosed to any other parties for any other purpose without the express, written permission of Zebra Technologies.

Product Improvements

Continuous improvement of products is a policy of Zebra Technologies. All specifications and designs are subject to change without notice.

Liability Disclaimer

Zebra Technologies takes steps to ensure that its published Engineering specifications and manuals are correct; however, errors do occur. Zebra Technologies reserves the right to correct any such errors and disclaims liability resulting therefrom.

Limitation of Liability

In no event shall Zebra Technologies or anyone else involved in the creation, production, or delivery of the accompanying product (including hardware and software) be liable for any damages whatsoever (including, without limitation, consequential damages including loss of business profits, business interruption, or loss of business information) arising out of the use of, the results of use of, or inability to use such product, even if Zebra Technologies has been advised of the possibility of such damages. Some jurisdictions do not allow the exclusion or limitation of incidental or consequential damages, so the above limitation or exclusion may not apply to you.

About This Document

This section provides you with contact information, document structure, and organization.

Who Should Use This Document

This manual is intended for use by any user who needs to install, integrate, upgrade, or troubleshoot problems with Zebra Printer Setup Utility.

How This Document Is Organized

The User Guide is organized as follows:

<table>
<thead>
<tr>
<th>Section</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Introduction and Installation on page 6</td>
<td>This chapter provides general information about Zebra Printer Setup Utility Application and includes supported operating systems, connectivity, printers, and devices.</td>
</tr>
<tr>
<td>Installation and Setup on page 9</td>
<td>This chapter identifies how to download the application, set up the printer, and perform a test print.</td>
</tr>
<tr>
<td>Discovery and Connectivity on page 9</td>
<td>This chapter describes the discovery methods and using the Connectivity Wizard.</td>
</tr>
<tr>
<td>Media Setup on page 18</td>
<td>This chapter describes the steps to set up the media parameters and calibrate the sensors.</td>

</table>
Introduction and Installation

This chapter provides general information about Zebra Printer Setup Utility Application and includes supported operating systems, connectivity, printers, and devices.

Zebra Printer Setup Utility is an iOS ™ application (app) which will assist with the set up and configuration of a Zebra Link-OS ™ printer. This application is particularly useful for those printers that do not have LCD displays as the application provides an improved method to connect to a printer, configure, and determine its status via a mobile device.

Zebra Printer Setup Utility is available for download only through the Apple® App Store. Locate the application in the App Store and tap GET to install it.

Target Audience

Zebra Printer Setup Utility is intended for all customers and partners. Moreover, Zebra Printer Setup Utility may be used by Zebra Technical Support as part of a fee-based service called Install-Configure-Assist (ICA). As part of the service, customers will be instructed how to download the application, and receive guided support throughout the set up process.

Requirements

Printer Platform

Zebra Printer Setup Utility supports the following Zebra Link-OS printers:

- iMZ series
- QLn series
- ZR318, ZR328, ZR338, ZR628, and ZR638 printers
- ZQ300 series, ZQ500 series, and ZQ600 series
- ZD400 series, ZD500 series, and ZD600 series
- ZT200 series, ZT400 series, ZT500 series, and ZT600 series

The application supports all Link-OS printers with firmware version Vxx.xx.13Z or greater.
Connectivity

The application supports the following types of connectivity:

- Bluetooth Classic (BT)
- Wired/Ethernet
- Wireless

Operating Systems

The application is tested with and supported on iOS versions 11.1 and 12.1.

Device Platform

The application is tested with and supported on the following iOS devices.

- iPhone 6+
- iPhone 7 and iPhone 7+
- iPhone 8+
- iPhone X and iPhone XS
- iPad mini, iPad Air, and iPad Pro

The amount of viewable information on a given device varies due to screen size and may require scrolling to access all of the information.
Introduction and Installation

Feature Overview

The features listed below will be explained in more detail in other areas of this user guide.

• Printer discovery via multiple connectivity methods.
• Support for Bluetooth Classic, and Wired and Wireless network.
• Simple printer to mobile computer pairing, using the Print Touch system.
• Connectivity Wizard for configuring connection settings.
• Media Wizard for configuring key Media settings.
• Print Quality Wizard, for optimizing output legibility.
• Access to extensive printer status information, including details on the printer’s serial number, battery status, media settings, connectivity options and odometer values.
• Connectivity to popular file sharing services.
• Ability to retrieve and send files stored on the Mobile device or on a cloud storage provider.
• File transfer – used to send file contents or OS updates to the printer.
• Easy to use “Printer Actions”, including calibrate media, print a directory listing, print a configuration label, print a test label, and reset the printer.
• Install, enable, and disable Virtual Device languages.
• Printer Security Assessment Wizard to assess printer security posture, compare your settings against security best practices, and make changes based on your conditions to increase protection.
This chapter describes the discovery methods and using the Connectivity Wizard.

**Printer Discovery Methods**

These procedures describe how to use Zebra Printer Setup Utility to discover and connect to your printer. You can use the following methods:

- Discover Printers
- Manually select your printer
- Bluetooth pairing via your device Settings menu (required for first-time iOS use)

For successful network discovery, your mobile device should be connected to the same subnet as your printer. For Bluetooth communications, Bluetooth must be enabled on your device and printer. Refer to the user documentation for your device or printer for further details on configuring the printer and device.

**NOTE:** Bluetooth discovery can only retrieve the Friendly Name and MAC Address. If you encounter issues with printer discovery (and at times Zebra Printer Setup Utility may not be able to “discover” your printer), you may need to manually enter your printer’s IP address. Having your printer and mobile device on the same subnet will give you the greatest chance of successfully discovering the printer.

**NOTE:** If your printer has both Bluetooth and network connections enabled, Zebra Printer Setup Utility will pair via the network. If this is the first time you have connected to any printer (or if you have recently unpaired from this printer), and you are pairing via Bluetooth, you will be prompted to confirm the pairing request (2) on both the printer and the device.

**NOTE:** Starting with Link-OS v6, the "bluetooth.discoverable" function is now off by default and other devices cannot see or connect to the printer. With discoverability disabled, the printer will still make connections with a remote device that was previously paired.

**RECOMMENDATION:** Only keep discoverable mode enabled while paring to a remote device. Once paired, discoverable mode should be disabled. Starting with Link-OS v6, a new feature was introduced to enable limited discovery. Holding down the FEED button for 5 seconds will enable limited discovery. The printer will automatically exit limited discovery mode after 2 minutes have elapsed, or a device has successfully paired with the printer. This enables the printer to operate safely with discoverable mode disabled until a user with physical access to the printer activates it. Upon entering Bluetooth Pairing Mode, the printer will provide feedback that the printer is in Pairing Mode using one of these methods:

- On printers with a “Bluetooth” screen icon or Bluetooth LED, the printer shall flash the “Bluetooth” screen icon or Bluetooth LED on and off every second while in pairing mode
- On printers without a “Bluetooth” screen icon or Bluetooth LED, the printer shall flash the “Data” icon or Data LED on and off every second while in pairing mode
• Specifically, on the ZD220, ZD230, and ZD888 models, the 4 flash LED sequence places the printer into Bluetooth Pairing Mode.

• Specifically, on the ZD510 model, the 5 flash LED sequence places the printer into Bluetooth Pairing Mode.

Discovered Printers

To discover printers, complete these steps:

1. From the Dashboard, tap the Menu icon 📊.
2. Tap Discover Printers.
   
   Zebra Printer Setup Utility will search and display a list of discovered Bluetooth and network connected printers. At the completion of the discovery, the Discovered Printers group is updated. Progress dialogs are displayed during the discovery process.

   NOTE: If this is the first time using Bluetooth to connect to your printer with an iOS device, you must initially pair it using the Settings menu. See Bluetooth Pairing via the Settings Menu below.

3. Tap the desired printer in the list.
   
   Zebra Printer Setup Utility will find and connect to the printer as shown in Figure 1 depending on your Bluetooth or network connection.

Bluetooth Pairing via the Settings Menu

You may pair your mobile device with your printer using the device’s Settings menu.

IMPORTANT: On iOS devices, this is required the first time you connect, or the Printer Setup Utility will not be able to Discover it. Once you have initially paired, the printer will be available via discovery in the future.

To pair with a printer using the Settings menu on your device:

1. On your device, go to the Settings menu.
2. Select Bluetooth.
   
   A list of paired devices will appear, as well as a list of unpaired devices.
3. Tap on the device you wish to pair with.
4. Confirm the pairing code is the same on both your device and on the printer.
   
   A new scan will discover and show the paired devices, as well as other available devices. You may pair with another printer on this screen, initiate a new scan, or exit the menu.
Manually Select Printer

To add a printer using Manually Select Printer, complete these steps.

1. Open the Dashboard.
2. Tap the Menu icon 📜 to open the Side Drawer.
3. See Figure 1. Tap Manually Select Printer.
4. Enter the printer’s DNS/IP address, and then tap Search to begin the discovery.

Figure 1  Manually Select a Printer
Discovery and Connectivity

Connectivity Wizard

The Connectivity Settings screen is where you can adjust the connection settings on the printer for wired/Ethernet, wireless, or Bluetooth.

To change your Connectivity Settings, complete these steps.

1. See Figure 2. From the Dashboard, tap Connectivity Settings.
   - • indicates the printer is connected and ready to print.
   - • indicates there is a communication error with the printer.
   - • If the printer is not connected the background is grayed out.

2. Select your method (Wired Ethernet, Wireless, or Bluetooth) to configure to the printer, and follow the prompts.

Figure 2  Dashboard Screen & Connectivity Settings
Wired Ethernet

Wired Ethernet is used when a printer is connected to your LAN using an Ethernet cable. The advantage of a wired connection is that it is generally faster than a wireless (WiFi) or Bluetooth connection.

Within the Wired/Ethernet Settings menu, you may change, save, and apply the following elements:

- **Hostname**
- **IP Addressing Protocol**
- **Client ID**
- **Client ID Type**
- **Save settings to file**. Follow the prompts to save the file to your preferred location.
- **Apply** settings on the printer

**Figure 3** Wired Settings Screens
Wireless

Wireless is the term used to describe any computer network where there is no physical wired connection between sender and receiver, but rather the network is connected by radio waves and/or microwaves to maintain communications. Within the Wireless Settings (see Figure 4) menus, you may change, save, and apply the following elements:

- **Wireless Menu (1)**
  - Hostname
  - Turn Wireless on/off
  - IP Addressing Protocol
  - Power Save Mode

- **Wireless / Client ID Menu (2)**
  - Client ID
  - Client Type
  - IP Address, Subnet Mask, Default Gateway (applicable when Permanent IP Addressing protocol is selected)

- **Wireless / Details Screen (3)**
  - ESSID
  - Security Mode
  - Wireless Band
  - Channel List

**NOTE:** WEP security mode has been removed from Link-OS 6 firmware, but is still applicable in Link-OS 5.x and earlier.

- **Wireless / Apply Settings Screen (4)**
  - Save settings to file. Follow the prompts to save the file to your preferred location.
  - Apply settings on the printer

**Figure 4**  Wireless Settings Screens
Bluetooth

Bluetooth is a method where devices such as cell phones, computers, and printers can be easily interconnected using a short-range wireless connection. The transceiver operates on a frequency band of 2.45 GHz that is available globally (with some variation of bandwidth in different countries).

Within the Bluetooth Settings menus, you may change, save, and apply the following elements:

- **Bluetooth Menu (1)**
  - Enable/Disable Bluetooth
  - Discoverable
  - Friendly Name
  - Authentication PIN

- **Bluetooth / Advanced Menu (2)**
  - Minimum Bluetooth Security Mode
  - Bonding
  - Enable Reconnect

**NOTE:** When Enable Reconnect is set to off, the printer will not automatically reconnect to the mobile device after a restart. You must manually reconnect to the printer through the mobile device Bluetooth settings (see Bluetooth Pairing via the Settings Menu on page 10). Set this option to iOS only to allow the printer to automatically reconnect after restarting.

- **Bluetooth / Apply Settings Screen (3)**
  - Save settings to file. Follow the prompts to save the file to your preferred location.
  - Apply Settings

**Figure 5** Bluetooth Settings Screens

![Bluetooth Settings Screens](image)
Unpair a Printer

If you need to unpair a Bluetooth-connected printer (for example, for troubleshooting purposes), you will do so using the Settings menu—not inside the Zebra Printer Setup Utility application. If you prefer to deselect a printer, see Deselect a Printer on page 17.

To unpair a Bluetooth-connected printer, complete these steps.

1. On your device, go to the Settings menu.
2. Select Bluetooth.
   A list of paired devices will appear.
3. Tap on the Info icon beside the printer to be unpaired.
4. Tap on Forget This Device.
   A new scan will discover and show the available devices. You may pair with a printer on this screen, initiate a new scan, or exit the menu.

Printer Ready State

The ready state of the printers are checked at specific times. A pop-up box displays a warning if any of the printers are offline or not ready to print. Ready states are checked:

- Upon start-up of the application
- When the application gets focus back
- At the end of the discovery process
- When a printer is selected
Deselect a Printer

If you wish to disconnect the Printer Setup Utility from a printer, you may choose **Deselect printer**. This is a good option if you only need to step away for a short time and want an easy way to reconnect with the same printer.

**To deselect a printer, complete these steps.**

1. From the Dashboard, tap the Menu icon  to open the Side Drawer.
2. Tap **Deselect Current Printer**.
   - Tap CONFIRM if you wish to deselect the printer. The printer will remain available in the **Recently Selected** menu.
   - Tap CANCEL to cancel the operation.

**Figure 6** Manually Deselect a Printer

![Side Drawer](image1)

![Confirm Deselection](image2)
Media Setup

This chapter describes the steps to set up the media parameters and calibrate the sensors.

Media Settings

The Media Settings menu will provide details on the current media, including width and length, and the media type. From this menu, you may change the media type, width, length, and orientation.

To change your Media Settings, complete these steps.
1. See Figure 7. From the Dashboard, tap Media Settings. From this screen, you can, see the current media settings.
   - Tap Media Settings again to change Media Type, Width, or Length
   - Tap Print Test Label to print test labels with the current settings.

Figure 7  Dashboard Screen & Media Settings
2. Tap Media Settings again to enter a series of detailed menus. Within the Media Settings menus, you may adjust, apply, and save the following elements:

   • Media Screen (1)
     • Adjust the Media Type (label/tag or receipt)
     • Adjust the Width
     • Adjust the Length
     • Adjust the Orientation
   • Media Details Screen (2)
     • Adjust the Media Type (continuous, gap, or black mark)
     • Adjust the Type of Transfer (direct thermal or thermal transfer)
     • Adjust the Media Handling (rewind, tear off, cutter, etc.)
   • Media / Apply Settings Screen (3)
     • Save settings to file.
     • Apply settings on the printer.

Figure 8  Media Settings Screens
This chapter provides instructions to view and adjust the print quality of your printer.

**Print Quality Assistant**

The Print Quality Assistant will permit you to print preset speed and darkness settings on labels, save and apply these values, and ultimately fine-tune your printed labels.

**IMPORTANT:** The ZD510 printer speed and darkness settings are determined by the printer cartridge that is installed. The Print Quality Assistant will not change any values on this printer.

**To open Print Quality Assistant, complete these steps.**

1. See Figure 9. From the Dashboard, tap **Print Quality**.
2. Tap **Print Quality Assistant** to enter a series of detailed menus.

---

**Figure 9**  Dashboard Screen & Print Quality Settings

**Dashboard Screen**

**Print Quality Screen**
See Figure 10. Within the Print Quality Assistant menus, you may adjust and apply the following elements:

- **Sample Labels Screen (1)**
  - Adjust the **No. of Labels to Print**. You may pick from 4, 9, 16, or 25 labels.

- **Generate Test Labels (2)**
  The numbers of labels printed is determined by the entry in the previous screen.

- **Select a Label Screen (3)**
  - Adjust the **Label Identifier**
    Tap the Label Identifier to select one of the preset Speed and Darkness options
    - AA - Speed 2.0, Darkness 15.0
    - AB - Speed 4.0, Darkness 15.0
    - BA - Speed 2.0, Darkness 30.0
    - BB - Speed 4.0, Darkness 30.0

- **Apply Settings Screen (4)**
  - **Save settings to file**. Follow the prompts to save the file to your preferred location.
  - **Apply** settings on the printer.

**Figure 10**  Print Quality Settings Screens

(1) Sample Labels Screen  (2) Generating Test Labels  (3) Select a Label  (4) Apply Settings
Manually Adjust Print Quality

You may manually adjust the print quality of your printer.

To manually adjust print quality, complete these steps.
1. See Figure 11. From the Dashboard, tap **Print Quality**.
2. Tap **Manually Adjust (2)**.

**Figure 11** Dashboard Screen & Print Quality Settings

3. Within the **Manually Adjust menu**, you may adjust and apply the following elements:
   - **Speed and Darkness Screen (3)**
     Move the slider to change each setting.
   - **Apply Settings Screen (4)**
     - **Save settings to file**. Follow the prompts to save the file to your preferred location.
     - **Apply** settings on the printer.
Available Files and Printer Actions

This chapter describes information provided in Available Files and Printer Actions in the Zebra Printer Setup Utility. It also includes information about the Security Assessment Wizard.

Available Files

If you tap on Available Files, a list of files is displayed. From this list, if you tap on a file name, a dialog is displayed with the option to send the file to the printer. This feature can be used to send files containing ZPL, SGD commands, or printer operating system files to the printer.

After installing a firmware file, you may need to reconnect the printer. See Discovery and Connectivity on page 9 for more information.

Printer Actions

All actions on this menu except for the Security Assessment Wizard are performed immediately. For example, if you select Calibrate Media, the printer will perform that function immediately after you select that action and you will see the printer feeding media out during the calibration. For the Security Assessment Wizard, you will enter a set of supplemental screens.

1. From the Dashboard, tap Printer Actions.
2. Select the desired action.

Figure 12  Dashboard (1) and Printer Actions (2) Screens
Printer Actions Elements

Within the **Printer Actions** Settings menu, you may choose from the following elements:

- **Calibrate Media** - automatically starts a media calibration on the printer.
- **Print Directory List** - automatically prints a list of files stored on the printer.
- **Print Configuration Label** - automatically prints a configuration label.
- **Print Test Label** - automatically prints a test label.
- **Reset Printer** - automatically resets the printer.
- **Security Assessment** - accesses the Security Assessment wizard.
- **Enable Diagnostics** - enables Diagnostic mode, which should only be used for advanced troubleshooting.
Security Assessment Wizard

IMPORTANT: Before implementing any recommended changes from the Security Assessment Wizard, you should verify them in a test environment before implementing across your printer network.

1. See Figure 13. From the Dashboard, tap Printer Actions.
2. Tap Security Assessment. Tap About the Assessment (3) to see more information (4).
3. Tap Scan Now (3) to start the Security Assessment scan.
4. Tap the communication interface (Bluetooth, Wireless, or Local) which you use for normal printer operations (5).

   The Security Assessment wizard starts scanning for risks (6). Once the scan is finished, the Scan Results (7) are displayed.
   - ✓ indicates there is no risk.
   - ! indicates a moderate risk that may need to be addressed.
   - ✗ indicates a high-level risk that should be addressed.
   - NA indicates that there is no risk associated because the feature is not in use or enabled on your printer.

5. From the Scan Results page, tap on a risk to display the Risk Details (8).
6. From the Scan Results page, tap Get Full Report to have a full report sent to your email address (9). Once you enter your email and submit, you will then have the option to select an email client.

NOTE: An email account is required to be setup on your device in order to email the security report. The default email application for your mobile device will be used to send the report.

(4) About Screen

Block Unwanted Access and Ensure Your Data and Infrastructure are Protected

As printing devices become more sophisticated, they also become more vulnerable to security breaches.

Our Print Security Assessment allows you to better understand your printer’s security stance. That way, each connection and data exchange can be carefully controlled to ensure that information is protected and available to authorized users only.

This chapter provides information about Device Language Selector and Virtual Device Management in Zebra Printer Setup Utility.

Introduction

While the names sound similar because both use the word “device”, device languages and virtual devices are not the same.

A device language is a language that is native to Zebra printers and is factory installed. These languages send commands to the printer to perform specific functions. To select and apply a device language, see Device Language Selector on page 27.

A virtual device is an application which emulates another company’s printer language. Generally, a virtual device includes a subset of their printer commands. Unlike “device languages”, Virtual Devices are not native to Zebra printers and must be installed on printers.

Most virtual device apps are delivered via zip file; contain a small script file and a text file; and can be installed quickly. There are two exceptions:

- Virtual Device-I
- Virtual Device-D

IMPORTANT: These virtual devices are complete firmware downloads. These are very large files, will take a substantial amount of time to download and install on the printer, and will reboot your printer twice. These two virtual devices are also mutually exclusive, so only one can be installed on the printer at a time.

To install a virtual device, see Virtual Device Management on page 28.

Device Language Selector

Device Language includes native Zebra supported languages (and virtual devices previously loaded) on the printer. Only those languages (or virtual devices) loaded on the printer will be displayed on the Set Device Language screen.

The Device Language Selector permits you to change the device language used to communicate with the Zebra printer. Device Languages change depending on the printer to which you want to send commands. For example, “Line Print” will only appear as a native Device Language for the ZQ510 printer, and will not appear as a native Device Language for the ZD410 printer.
Set the Device Language

To set the Device Language, complete these steps.

1. See Figure 14. From the Dashboard, tap **Device Language**.
   
   The Device Language currently in use is indicated (2).

2. Tap **Set Device Language** to make a change.

3. On the **Set Device Language** screen (3), tap the language you wish to use, and then tap **Apply**.

   **NOTE:** The currently active device language will be selected by default.

---

Virtual Device Management

Virtual Devices are on-printer applications that allow Link-OS printers to use legacy languages normally associated with other printer brands. Multiple Virtual Devices (except for Virtual Device-I and Virtual Device-D as noted previously) can be downloaded to a single printer. It is not necessary (or possible) to remove Virtual Devices from printers; users simply choose between command languages as needed.

Virtual Device Management is performed using the Device Language option on the Dashboard. In order to install the Virtual Device, you must download a zip file to your mobile device.

There are two ways to install the virtual device via Zebra Printer Setup Utility:

- Download a zip file to your mobile device, or
- Store and download the zip file from your Cloud storage provider.
Download the Virtual Device Zip File

To download the Virtual Device, complete the following from your computer or your mobile device:

1. Open a web browser and navigate to:
   https://www.zebra.com/virtualdevices

2. Locate your printer type in the list of printers, and then tap Download Now or Request Information, if support for your printer cannot be found.

3. Fill out the information on the Virtual Device Download Request form.

4. Click Submit.

5. Read the End User License Agreement.

6. Click Accept and Begin Download Now.
   Your browser prompts you to open or save the zip file containing the Virtual Device.

7. Save and store the Virtual Device zip file to your computer or storage location (Box, DropBox, iCloud, etc).

   The zip file contains the following files:
   - The Virtual Device .NRD (or .ZPL) file to be downloaded to a Zebra printer.
   - Text files (.txt) with the SGD commands to enable and disable the virtual device.
   - A sample test format that can be sent to the printer once the virtual device is enabled.
Install the Virtual Device

This section will disable the current device language or virtual device, install, and enable the new virtual device all within this single feature. When you install a virtual device, you are sending the .NRD (or .ZPL) file to the printer.

After the files are sent to the printer, the Virtual Device will appear in the Set Device Language screen. When you install the virtual device for the first time, a browser will open and you can select the virtual device zip file.

**IMPORTANT:** Once you have completed a firmware update, or a firmware and virtual device update, you may need to reconnect your mobile device to the printer. You will be prompted to do so if necessary.

**To install the virtual device, complete these steps.**

1. See Figure 15. From the Dashboard, tap **Device Language** (1).

2. From the Device Language screen, tap **Set Device Language** (2).
   - If this is the first time you are installing a virtual device, it will not appear in the list.

3. Tap **Install Virtual Device** (3).

**Figure 15** Dashboard (1) and Device Languages (2) Screens

4. Navigate to the zip file, tap it, and tap **Install**.

**NOTE:** Do not change the name of the Virtual Device zip file.

Click **Cancel** to exit and return to the Set Device Language screen. If you already have an active virtual device, you will be prompted to disable it before proceeding.

- Tap **Disable** to disable the Virtual Device.
- Tap **Cancel** to exit and return to the Set Device Language screen.

5. The printer device language will be set to “**Virtual Device - M**” in this example. Now, the printer is ready to install a new virtual device.
NOTE: If you are connected via USB cable and are also installing a firmware-based Virtual Device, specifically, either of the following:

- Virtual Device-I
- Virtual Device-D

You will need to perform an additional step.

- Click **OK** to close the dialog and to begin downloading the Virtual Device.
- Click **Cancel** to close the dialog.

After installation of a firmware-based Virtual Device, the additional step required is to enable that Virtual Device.

If required, reconnect the printer and select the Virtual Device in **Set Device Language** option.

1. After successfully installing a virtual device, you will be prompted to print a test label.

**NOTE:** The Print Test Label option may not be available if the virtual device was not installed from the device currently being used.

2. Tap **Print** to print a test label.
   - Tap **Skip** to return to the Device Language screen.

**NOTE:** When you return to the Device Language screen, the Current Device Language displays the specific Virtual Device language enabled for your printer.

**IMPORTANT:** After enabling a virtual device, the printer reboots, and the application reconnects, and most menu options are disabled.

**Figure 16** Dashboard after Virtual Device Installation
This chapter describes the printer and Zebra Printer Setup Utility application screen information available.

Zebra Printer Setup Utility Application Screens

This section details the Zebra Printer Setup Utility application screens. Additional items include Deselect Printer, Zebra Assist, Settings, and About. You may manage your printers via smartphone or tablet. You may view Zebra Printer Setup Utility screens in either portrait or landscape orientation on your tablet only. (Your smartphone displays screens in portrait only.)

Once the application is downloaded, the application opens to the Dashboard screen. Since this is the first time you have used the application, there is no printer selected. See Printer Discovery Methods on page 9 to establish a connection to a printer.

Figure 17  Dashboard (First Time Use)
Printer Information

Specific printer information is available by touching the photo of the printer or (1) on the Dashboard. There are three tabs providing information about the printer and are listed below in Figure 18.

- General tab (2): Displays the model, serial number, firmware version of the printer, battery status, and Advanced Information (5).
- Printing tab (3): Displays the print status, mode, speed, darkness, media type and dimensions, odometer information, and battery information. You may need to scroll down to see the lower section of the screen.
- Connectivity tab (4): Displays information about the connectivity method (e.g., Bluetooth, Wireless, Wired/Ethernet), MAC Address, IP Address, and Region. You may need to scroll down to see the lower section of the screen. Only information applicable to the current connectivity method is shown. In the examples below, the printer is connected via Bluetooth.
- Advanced Information (5): Displays additional printer and battery information.

Figure 18  Printer Information
Other Dashboard Menu Items

At the bottom of the Dashboard are three miscellaneous items. These include:

- Zebra Assist
- Settings
- About

Zebra Assist

Zebra Assist automates the process of collecting your printer's configuration and attaching it to an email ready to send to Zebra Tech support to assist with troubleshooting.

From this screen, you may tap:

- To visit zebra.com
- To send an email to Zebra Support (For more details, see Send Settings File to Zebra Assist on page 37.)
- Review a list of previous emails you sent to Zebra Support

Figure 19  Zebra Assist Screen

Settings

From the Settings page (1), you can change various items such as:

- **Unit of measurement**: set up inches, centimeters, and millimeters
- **Warn on Connect**: set notifications for when some features are not available to connected printer.
- **Anonymous error reporting**: select to send, or not send, error reports to Zebra. The default is checked/enabled; meaning error reports will automatically be sent. To opt out of sending the reports, uncheck the box (2).

**NOTE:** Zebra recognizes that the security of your personal information is an important part of our partnership and we are not in the business of selling or making it available to others. Zebra maintains its commitment to safeguard and protect the confidentiality, integrity, and availability of information, which is stored, processed, and/or transacted through our products. We also collect data in a form that does not, on its own, permit direct association with specific customers or corporations. We may collect, use, transfer, and disclose non-personal information for any purpose. We conduct our business in compliance with applicable laws on data privacy protection and data security.
About

The About screen provides various information about the application version, copyright information, open source licensing, and Zebra’s privacy policy.

Capture and Send Settings File

This chapter describes how to capture and send a settings file.

Capture or Save Settings to a File

With Zebra Printer Setup Utility, you can save the printer settings to a file. There are three menus where you can save your settings to a file:

- Connectivity Settings
- Media Settings
- Print Quality

To change your Media Settings, see Media Settings on page 18. To save your settings, complete these steps.

1. From the Dashboard, tap **Media Settings**.
2. Tap **Next** until you get to the **Apply Settings** (1) screen.
3. Tap the checkbox **Save settings to file**, and then tap **Apply**.

Figure 22 Media Settings Screens

4. Follow the prompts to set up your Saved file location.
5. Tap **Apply** to apply your settings to the printer.
   - Tap **Cancel** to quit without saving your settings.
Capture and Send Settings File

- Tap Back to return to the previous menu screen.

Send Settings File to a Printer

Once you have saved your settings to a file, you may send your settings file to your printer.

To send the settings file to a printer, complete these steps.
1. From the Dashboard, tap Available Files.
2. Tap the file you wish to send.

NOTE: The settings files are named by appending a number to the end of the file name. (Default increment is 1; the range is 1-9999.)
3. Tap Send To Printer to send the file or Close to quit.
   When the file has been successfully sent, an acknowledgment will display.

Send Settings File to Zebra Assist

At times, you may want to send your settings file to Zebra Assist. They can help troubleshoot issues with a printer.

To send a settings file to Zebra Assist, complete these steps.
1. From the Dashboard, tap Zebra Assist.
2. Tap Email Zebra Support on the next screen.
3. To select your issue, tap in the issue field to show all of the choices (2). Select the issue you wish to share.
4. Add a Description, if desired.
5. To add an attachment:
   - Tap to add a file.
   - Tap to add a picture.
   - Tap to add a printer configuration file.

IMPORTANT: When sending file attachments to Zebra Assist, file sizes should not exceed 25MB due to email server limits. 10MB or less is recommended. If necessary share files using a Cloud storage service and include the link in your message.
6. Once you have added all information you have to share, tap Create Email.

**NOTE:** Attachments to email will be compressed so size of attachments will change from the original stored size

7. If prompted, select the **Share with** method and **Just Once** or **Always**.

   An email opens with your selected settings file attached.

**NOTE:** The default email application for your mobile device will be used to send the report.

8. Tap the **Send icon** the same as any email.

9. Tap **Done**.

**Figure 24** Support Email Screen

After you tap **Done**, the Zebra Assist main screen appears.
