1 Introduction

The AP-8533 external antenna and internal antenna Access Point’s are high-tier Access Point’s for dependable and efficient network performance. The AP-8533 is a tri-radio Wave 2 802.11ac Access Point utilizing one 5GHz 802.11ac radio, one 2.4GHz 802.11n radio and a dual-band unlock 2.4GHz/5GHz 802.11ac radio for sensor functionality.

The Access Point’s unique WiNG 5 software enables the Access Point to function as either a Standalone Access Point, an Adaptive Access Point, or a Virtual Controller.

If new to Access Point technology, refer to the WiNG Access Point System Reference Guide to familiarize yourself with Access Point technology and the feature set supported by the WiNG operating system. The guide is available at www.zebra.com/support.

This document is written for the qualified network device installer.

1.1 Document Conventions

The following graphical alerts are used in this document to indicate notable situations:

Note • Tips, hints, or special requirements that you should take note of.

Caution • Care is required. Disregarding a caution can result in data loss or equipment malfunction.

1.2 Warnings

• Read all installation instructions and site survey reports, and verify correct equipment installation before connecting the AP-8533 Access Point.
• Remove jewelry and watches before installing this equipment.
• Verify any device connected to this unit is properly wired and grounded.
• Verify there is adequate ventilation around the device, and that ambient temperatures meet equipment operation specifications.
1.3 Site Preparation

- Consult your site survey and network analysis reports to determine specific equipment placement, power drops, and so on.
- Assign installation responsibility to the appropriate personnel.
- Identify and document where all installed components are located.
- Ensure adequate, dust-free ventilation to all installed equipment.
- Identify and prepare Ethernet and console port connections.
- Verify cable lengths are within the maximum allowable distances for optimal signal transmission.

1.4 AP-8533 Package Contents

An AP-8533 Access Point is available in both external antenna (AP-8533) and internal antenna (AP-8533I) configurations. An AP-8533 ships with the following:

- AP-8533 Access Point
- AP-8533 Installation Guide (This Guide)
- Wall mount screws and mounting bracket

1.4.1 Features

An AP-8533 Access Point supports the following feature set:

- Two RJ-45 connectors (GE1/POE and Console)
- Two LED indicators with dual lights for each
- One 2.4GHz 802.11n radio
- One 5GHz 802.11ac radio,
- One dual band unlock 2.4GHz/5GHz 802.11ac sensor radio
- One Bluetooth/BLE radio
- Wave 2
- Baud rate: 115200

The GE1/POE accepts 802.3at or 802.3af compliant power from an external source.

Note • When operating in a Gigabit Ethernet environment, CAT-5e or CAT-6 cable is recommended for Gigabit operation. The equipment is to be connected only to PoE networks. Zebra does not recommend routing network cables outside.
1.5 AP-8533 Antennas

1.5.1 Dual Band 2.4 GHz / 5 GHz WIFI Antennas - US/Taiwan

Note • Per FCC requirement, the use of the Access Point on UNII-1 of 5GHz band requires installers to input antenna elevation gain during configuration if the AP placement is outdoors. This information can be found in Zebra antenna guide located at www.zebra.com/support.

An AP-8533 external antenna Access Point supports the following antenna options:

</table>
2 Hardware Installation

2.1 Installation Instructions

An AP-8533 Access Point mounts either on a wall (with $M \ 3.5 \times 0.6 \times 23 \ MM$ pan head screws and mounting bracket or equivalent) or on a suspended ceiling T-bar.

To prepare for the installation:

1. Match the part number on the purchase order with the part numbers in the packing list and on the case of the Access Point.

2. Verify the contents of the box include the intended AP-8533 Access Point, and the included hardware matches the package contents (see AP-8533 Package Contents on page 8).

<table>
<thead>
<tr>
<th>Part Number</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>AP-8533-68SB30-EU</td>
<td>AP-8533 Tri Radio 802.11AC Wave 2 Access Point, Dedicated Sensor, BLE, Internal Antenna 2XGE, EU version</td>
</tr>
<tr>
<td>AP-8533-68SB40-EU</td>
<td>AP-8533 Tri Radio 802.11AC Wave 2 Access Point, Dedicated Sensor, BLE, External Antenna 2XGE, EU version</td>
</tr>
</tbody>
</table>

3. Review site survey and network analysis reports to determine the location and mounting position for the AP-8533 Access Point.
4. Connect a CAT-5 or better Ethernet cable to a compatible 802.3at or 802.3af power source and run the cable to the installation site. Ensure there is sufficient slack on the cable to perform the installation steps.

Note • When operating in a Gigabit Ethernet environment, CAT-5e or CAT-6 cable is recommended for Gigabit operation.

2.2 Precautions

Before installing an AP-8533 Access Point, verify the following:

• Your are using the correctly rated power solution for the AP-8533 (either the AP-PSBIAS-2P3-ATR Power Injector or the PWR-BGA48V45W0WW external power supply)
• Do not to install the AP-8533 in wet or dusty areas.
• Verify the environment has a continuous temperature range between 32° F to 122° or 0° C to 50° C.

2.3 Access Point Placement

For optimal performance, install the Access Point away from transformers, heavy-duty motors, fluorescent lights, microwave ovens, refrigerators and other industrial equipment. Signal loss can occur when metal, concrete, walls or floors block transmission. Install the Access Point in an open area or add Access Points as needed to improve coverage.

Antenna coverage is analogous to lighting. Users might find an area lit from far away to be not bright enough. An area lit sharply might minimize coverage and create dark areas. Uniform antenna placement in an area (like even placement of a light bulb) provides even, efficient coverage.

Install the Access Point at an ideal height of 10 feet from the ground.

To maximize the Access Point’s radio coverage area, Zebra recommends conducting a site survey to define and document radio interference obstacles before installing the Access Point.

2.4 Power Injector System

An AP-8533 Access Point can receive power via an Ethernet cable connected to the GE1/POE (LAN) port.

When users purchase a WLAN solution, they often need to place Access Points in obscure locations. In the past, a dedicated power source was
required for each Access Point in addition to the Ethernet infrastructure. This often required an electrical contractor to install power drops at each Access Point location. The Power Injector merges power and Ethernet into one cable, reducing the burden of installation and allowing optimal Access Point placement in respect to the intended coverage area.

**Caution** • Using a non-compliant injector, or an injector supporting legacy modes prohibits the AP-8533 from functioning optimally.

**Caution** • Do not plug the AP-PSBIAS-2P3-ATR Power Injector into the Access Point’s Console port. Connecting the Power Injector into the console port can damage the port and void the AP-8533’s product warranty.

The AP-8533’s supported Power Injector (Part No. AP-PSBIAS-2P3-ATR) is a high power POE Injector delivering up to 30 watts. The Access Point can only use a Power Injector when connecting the unit to the Access Point’s GE1/POE port. The Power Injector is separately ordered and not shipped with an existing AP SKU.

The Access Point Power Supply (Part No. PWR-BGA48V45W0WW) is not included with the Access Point and is orderable separately as an accessory. If the Access Point is provided both POE power and PWR-BGA48V45W0WW power concurrently, the Access Point will source power from the PWR-BGA48V45W0WW supply only. Disconnecting the AC power from the PWR-BGA48V45W0WW causes the Access Point to re-boot before sourcing power from the POE Power Injector. If the AP is operating using injector supplied power, the AP will not automatically reboot if an AC adapter is connected. The Access Point continues to operate with power supplied from the AC adapter without change to the Access Point operating configuration. If using AC adapter supplied power and a change to the AP’s operating configuration is warranted, the Access Point needs to be manually rebooted.

**Caution** • The Access Point supports any standards-based compliant power source. However, using the wrong solution (including a POE system used on a legacy Access Point) could either limit functionality or severely damage the Access Point and void the product warranty.
A separate Power Injector is required for each AP-8533 Access Point comprising the network.

The Power Injector can be installed free standing, on an even horizontal surface or wall mounted using the Power Injector's wall mounting key holes. The following guidelines should be adhered to before cabling the Power Injector to an Ethernet source and an Access Point:

- Do not block or cover airflow to the Power Injector.
- Keep the Power Injector away from excessive heat, humidity, vibration and dust.
The Power Injector isn’t a repeater, and does not amplify the Ethernet signal. For optimal performance, ensure the Power Injector is placed as close as possible to the data port.

**Caution** • To avoid problematic performance and restarts, disable POE from a wired switch port connected to an Access Point if mid-span power sourcing equipment (PSE) is used between the two, regardless of the manufacturer of the switch.

**Caution** • Ensure AC power is supplied to the Power Injector using an AC cable with an appropriate ground connection approved for the country of operation.

To install the Power Injector to an Ethernet data source and an Access Point:

1. Connect the Power Injector to an AC outlet (110VAC to 220VAC).
2. Connect an RJ-45 Ethernet cable between the Power Injector **Data & Power Out** connector and the Access Point’s GE1/POE port.
3. Connect an RJ-45 Ethernet cable between the network data supply (host) and the Power Injector **Data In** connector.

   Ensure the cable length from the Ethernet source (host) to the Power Injector and Access Point does not exceed 100 meters (333 ft).

The Power Injector has no On/Off power switch. The Injector receives power and is ready for device connection and operation as soon as AC power is applied. Refer to the *Installation Guide* shipped with the Power Injector for a description of the device’s LEDs.

### 2.5 Wall Mount Instructions

A wall mount deployment requires hanging the AP-8533 Access Point with the provided mounting bracket and two screws. The AP-8533 can be mounted on to any plaster, wood or cement wall surface using the provided mounting bracket.

The hardware required to install the AP-8533 on a wall consists of:

- Two wide-shoulder Phillips pan head self-tapping screws (M3.5 x 0.6 x 23 mm)
- Mounting bracket

Optional customer provided installation tools include:

- Phillips head screw driver, or drill and drill bit
2.5.1  **Wall Mount Procedure - New Installation**

This section describes a new AP-8533 installation with no previous Access Point existing on the intended wall surface.

1. Place the mounting bracket against the wall.
2. Mark the screw hole locations depending on the intended deployment orientation of the unit.

![Mounting Bracket Diagram]

**Note** • When pre-drilling a hole the recommended hole size is 4mm (0.16in.).

3. At each point, drill a hole in the wall and attach the mounting bracket.

4. Place the Access Point on the mounting bracket.
5. Cable the Access Point using either the Power Injector solution (AP-PSBIAS-2P3-ATR) or the approved AP-8533 power supply (PWR-BGA48V45W0WW).
For Power Injector installations:

a. Connect a RJ-45 CAT5e (or CAT6) Ethernet cable between the Power Injector Data & Power Out connector and the Access Point's GE1/POE port.

b. Connect a RJ-45 CAT5e (or CAT6) Ethernet cable between the network data supply (host) and the Power Injector Data In connector.

c. Ensure the cable length from the Ethernet source (host) to the Power Injector and Access Point does not exceed 100 meters (333 ft). The Power Injector has no On/Off power switch. The Power Injector receives power as soon as AC power is applied.

For standard power adapter (non Power Injector) and line cord installations:

a. Connect a RJ-45 Ethernet cable between the network data supply (host) and the Access Point's GE1/POE port.

b. Verify the power adapter is correctly rated according to the country of operation.

c. Connect the power supply line cord to the power adapter.

d. Attach the power adapter cable into the power connector on the Access Point.

e. Attach the power supply line cord to a power supply.

6. Verify the Access Point is receiving power by observing the LEDs are lit or flashing. For more information on AP-8533 LED behavior, see LED Indicators on page 25.

The Access Point is ready to configure.

Caution • If not using an AP-PSBIAS-2P3-ATR Power Injector, ensure only the AP-8533's designated power supply (PWR-BGA48V45W0WW) is used to supply power to the Access Point. Using an incorrectly rated power supply could damage the Access Point and void the product warranty. Do not actually connect to the power source until the cabling portion of the installation is complete.
2.6 Suspended Ceiling T-Bar Mount Instructions

Ceiling mount requires holding the AP-8533 up against the T-bar of a suspended ceiling grid and twisting the unit on to the T-bar. If deploying the AP-8533 on a sculpted ceiling T-Bar, the Access Point mounting kit (Part No. KT-135628-01) can optionally be used as well.

1. First install the mounting bracket on the T-bar, then attach the mounting bracket using the mounting slots on the Access Point.
2. Cable the Access Point using either the Power Injector solution (AP-PSBIAS-2P3-ATR) or the approved AP-8533 power supply (PWR-BGA48V45W0WW).

For Power Injector installations:

a. Connect a RJ-45 CAT5e (or CAT6) Ethernet cable between the network data supply (host) and the Power Injector Data In connector.

b. Connect a RJ-45 CAT5e (or CAT6) Ethernet cable between the Power Injector Data & Power Out connector and the Access Point’s GE1/POE port.

c. Ensure the cable length from the Ethernet source (host) to the Power Injector and Access Point does not exceed 100 meters (333 ft). The Power Injector has no On/Off power switch. The Power Injector receives power as soon as AC power is applied.

For standard power adapter (non Power Injector) and line cord installations:

a. Connect a RJ-45 Ethernet cable between the network data supply (host) and the Access Point’s GE1/POE port.

b. Verify the power adapter is correctly rated according the country of operation.

c. Connect the power supply line cord to the power adapter.

d. Attach the power adapter cable into the power connector on the Access Point.

e. Attach the power supply line cord to a power supply.

Caution • If not using an AP-PSBIAS-2P3-ATR Power Injector, ensure only the AP-8533’s designated power supply (PWR-BGA48V45W0WW) is used to supply power to the Access Point. Using an incorrectly rated power supply could damage the Access Point and void the product warranty. Do not actually connect to the power source until the cabling portion of the installation is complete.

3. Verify the unit has power by observing the LEDs. For more information on AP-8533 LED behavior, see LED Indicators on page 25.

4. Align the bottom of the ceiling T-bar with the back of the Access Point.

5. Orient the Access Point chassis by its length and the length of the ceiling T-bar.

6. Rotate the Access Point chassis 45 degrees clockwise.
7. Push the back of the Access Point chassis on to the bottom of the ceiling T-bar.
8. Rotate the Access Point chassis 45 degrees counter-clockwise. The clips click as they fasten to the T-bar.

The Access Point is ready to configure.
2.7 LED Indicators

The AP-8533 LED activity indicators are located on the front of the housing and are visible through the enclosure.
The LEDs display error conditions, and transmission, and network activity for the 5 GHz 802.11ac (amber) radio and the 2.4 GHz 802.11n (green) radio, sensor radio (white) and the BLE radio (blue).

<table>

3 Basic Access Point Configuration

Once the AP-8533 is installed and powered on, complete the following steps to get the Access Point up and running and access management functions:

1. The Access Point’s IP address is optimally provided using DHCP. A zero config IP address can also be derived if DHCP resources are unavailable. Using zero config, the last two octets in the IP address are the decimal equivalent of the last two bytes in the Access Point’s hardcoded MAC address.

   For example:
   
   MAC address - 00:C0:23:00:F0:0A
   
   Zero-config IP address - 169.254.240.10

   To derive the Access Point’s IP address using its MAC address:
   
   a. Open the Windows calculator by selecting Start > All Programs > Accessories > Calculator. This menu path may vary slightly depending on your version of Windows.
   
   b. With the Calculator displayed, select View > Scientific. Select the Hex radio button.
   
   c. Enter a hex byte of the Access Point’s MAC address. For example, F0.
   
   d. Select the Dec radio button. The calculator converts F0 into 240. Repeat this process for the last Access Point MAC address octet.
2. Point the Web browser to the Access Point’s IP address. The following login screen displays:

3. Enter the default username \textit{admin} in the \textbf{Username} field.
4. Enter the default password \textit{admin123} in the \textbf{Password} field.
5. Click the \textbf{Login} button to load the management interface.

\textbf{Note} • When logging in for the first time, you’re prompted to change the password to enhance device security in subsequent logins.

\textbf{Note} • If you get disconnected when running the wizard, you can connect again with the Access Point’s actual IP address (once obtained) and resume the wizard.
If this is the first time the management interface has been accessed, the Initial Setup Wizard automatically displays.

Note • The Initial Setup Wizard displays the same pages and content for each Access Point type supported. The only difference being the number of radios configurable by Access Point, as models vary.

The Introduction screen displays the various actions that can be performed using the wizard under the Function Highlight field. Use the Choose One type to Setup the Access Point field options to select the type of wizard to run. The Typical Setup is the recommended wizard. This wizard uses the default parameters for most of the configuration and sets a working network with the least amount of manual configuration.
The **Advanced Setup** wizard is for administrators who prefer more control over the different configuration parameters. A few more configuration screens are available for customization when the Advanced Setup wizard is used.

The first page of the *Initial Setup Wizard* displays the **Navigation Panel** and **Function Highlights** for the configuration activities comprising the Access Point's initial setup. This page also displays options to select the typical or advanced mode for the wizard.

The Navigation Panel for the Typical Setup Wizard displays the basic configuration options.

<table>
<thead>
<tr>
<th>Navigation Panel</th>
</tr>
</thead>
<tbody>
<tr>
<td>✓ Introduction</td>
</tr>
<tr>
<td>❌ Access Point Type</td>
</tr>
<tr>
<td>🛡️ Access Point Mode</td>
</tr>
<tr>
<td>🟥 L4I Configuration</td>
</tr>
<tr>
<td>🠧 Wireless L4I Setting</td>
</tr>
<tr>
<td>💂 Summary and Commit</td>
</tr>
</tbody>
</table>

A green checkmark to the left of an item in the **Navigation Panel** defines the task as having its minimum required configuration set correctly. A red X defines a task as still requiring at least one parameter be defined correctly.

6. **Select Save/Commit** within each page to save the updates made to that page's configuration. Select **Next** to proceed to the next page listed in the Navigation Panel without saving your updates.

**Note** • While you can navigate to any page in the navigation panel, you cannot complete the Initial AP Setup Wizard until each task in the Navigation Panel has a green checkmark.

For the purposes of this guide, use the **Typical Setup (Recommended)** option to simplify the process of getting the Access
Point up and running quickly with a minimum number of changes to the Access Point’s default configuration.

For information on using the Access Point’s Advanced Setup option, refer to the *WiNG Access Point System Reference Guide* to familiarize yourself with the feature set supported by the WiNG operating system. The guide is available at [www.zebra.com/support](http://www.zebra.com/support).

To configure the Access Point using the Typical Setup Wizard:

7. Select **Typical Setup** from the **Choose One type to Setup the Access Point** field on the Initial Setup Wizard.

8. The Typical Setup Wizard displays the **Access Point Settings** screen to define the Access Point’s Standalone versus Virtual Controller AP functionality. This screen also enables selection of the country of operation for the Access Point.

---

**Access Point Type Selection**

- **Virtual Controller AP** - When more than one access point is deployed, a single access point can function as a Virtual Controller AP and manage Dependent mode access points. The Virtual Controller AP can adopt and configure other like APs in a 24-cell deployment.

- **Standalone AP** - Select this option to deploy this access point as an autonomous “fat” access point. A standalone AP isn’t managed by a Virtual Controller AP, or adopted by a controller.

---

**Note** - The professional installer should refer to the *WiNG Access Point System Reference Guide* available at [www.zebra.com/support](http://www.zebra.com/support) for detailed information on how to set the Access Point’s transmit power, antenna gain and channel in respect to the deployment country’s unique regulatory requirements.

9. Select an **Access Point Type** from the following options:

   - **Virtual Controller AP** - When more than one Access Point is deployed, a single Access Point can function as a Virtual Controller AP. Up to 24 Access Points can be connected to, and managed by, a single Virtual Controller AP of the same Access Point type. These connected Access Points must be the same type as the Virtual Controller AP.

   - **Standalone AP** - Select this option to deploy this Access Point
as an autonomous fat Access Point. A Standalone AP isn't managed by a Virtual Controller AP, or adopted by a controller.

**Note** • If wanting to adopt the Access Point to a controller or service platform, use the controller or service platform’s resident UI to connect to the Access Point, provision its configuration and administrate the Access Point’s configuration.

**Note** • If designating the Access Point as a Standalone AP, its recommended the Access Point’s UI be used exclusively to define its device configuration, and not the CLI. The CLI provides the ability to define more than one profile and the UI does not. Consequently, the two interfaces cannot be used collectively to manage profiles without encountering problems.

10. Select the **Country Code** of the country where the Access Point is deployed. Selecting a proper country is a critical task while configuring the Access Point, as it defines the correct channels of operation and ensures compliance to the regulations of the selected country. This field is only available for the Typical Setup Wizard.

11. Select **Next** to set the Access Point’s network mode.

12. The Typical Setup Wizard displays the **Network Topology** screen to define how the Access Point manages network traffic.
13. Select an Access Point Mode from the available options.

- **Router Mode** - In Router Mode, the Access Point routes traffic between the local network (LAN) and the Internet or external network (WAN). Router mode is recommended in a deployment supported by just a single Access Point.

- **Bridge Mode** - In Bridge Mode, the Access Point depends on an external router for routing LAN and WAN traffic. Routing is generally used on one device, whereas bridging is typically used in a larger density network. Select Bridge Mode when deploying this Access Point with numerous peer Access Points supporting clients on both the 2.4GHz and 5GHz radio bands.
14. Select Next. The Typical Setup Wizard displays the **LAN Configuration** screen to set the Access Point’s LAN interface configuration.

**LAN Configuration**

Please configure interface settings for LAN (VLAN 1) which will be used by wireless clients.

- **Use DHCP**
  - Select the checkbox to enable an automatic network address configuration using the Access Point's DHCP server.

- **Static IP Address/Subnet**
  - Enter an IP Address and a subnet for the Access Point's LAN interface. If **Use DHCP** is selected, this field is not available. When selecting this option, define the following DHCP Server and Domain Name Server (DNS) resources, as those fields will become enabled on the bottom.

  - **DHCP Server**
    - Use on-board DHCP server to assign IP addresses to wireless clients
    - Range: 192.168.0.100 → 192.168.0.200
    - Default Gateway: 192.168.0.1

  - **Domain Name Server (DNS)**
    - **DNS Forwarding**
    - Primary DNS: [Enter]
    - Secondary DNS: [Enter]

15. Set the following DHCP and Static IP Address/Subnet information for the LAN interface:

- **Use DHCP** - Select the checkbox to enable an automatic network address configuration using the Access Point's DHCP server.

- **Static IP Address/Subnet** - Enter an IP Address and a subnet for the Access Point's LAN interface. If **Use DHCP** is selected, this field is not available. When selecting this option, define the following DHCP Server and Domain Name Server (DNS) resources, as those fields will become enabled on the bottom.

**Note** - When Bridge Mode is selected, WAN configuration cannot be performed and the Typical Setup Wizard does not display the WAN configuration screen.
portion of the screen.

- **Use on-board DHCP server to assign IP addresses to wireless clients** - Select the checkbox to enable the Access Point's DHCP server to provide IP and DNS information to requesting clients on the LAN interface.

- **Range** - Enter a starting and ending IP Address range for client assignments on the LAN interface. Avoid assigning IP addresses from x.x.x.1 - x.x.x.10 and x.x.x.255, as they are often reserved for standard network services. This is a required parameter.

- **Default Gateway** - Define a default gateway address for use with the default gateway. This is a required parameter.

- **DNS Forwarding** - Select this option to allow a DNS server to translate domain names into IP addresses. If this option is not selected, a primary and secondary DNS resource must be specified. DNS forwarding is useful when a request for a domain name is made but the DNS server, responsible for converting the name into its corresponding IP address, cannot locate the matching IP address.

- **Primary DNS** - Enter an IP Address for the main Domain Name Server providing DNS services for the Access Point's LAN interface.

- **Secondary DNS** - Enter an IP Address for the backup Domain Name Server providing DNS services for the Access Point's LAN interface.

16. Select **Next**. The Typical Setup Wizard displays the **Wireless LAN Setup** screen to set the an Access Point's WLAN 1 and WLAN 2 configuration.
17. Set the following WLAN1 Configuration parameters:

- **SSID** - Configure the SSID for the WLAN.
- **WLAN Type** - Configure encryption and authentication settings to protect the data and user integrity of WLAN 1.
- **No Authentication and No Encryption** - Configures a network without any user authentication or data encryption. This means any data transmitted through the network is in plain text. Any device between end points can see the information transmitted. This is the least secure of all network configurations.
- **Captive Portal Authentication and No Encryption** - Uses a RADIUS server to authenticate users before allowing them on to the network. Once on the network, no encryption is used for the data transmitted through the network. Select this option to use a Web page (either internally or externally hosted) to authenticate users before access is granted to the network.
- **PSK authentication, WPA2 encryption** - Configures a network that uses PSK authentication and WPA2 encryption. Select this option to implement a pre-shared key that must be correctly shared between the Access Point and requesting clients.

18. Select Next. The Typical Setup Wizard displays the **RADIUS Server Configuration** screen if required. Otherwise, the *Typical Setup Wizard* displays the **Summary and Commit** screen.
19. Use the **Radius Server Configuration** screen to configure the users for the onboard RADIUS server. Use the screen to add, modify and remove RADIUS users.

Some WLANs require authentication using the on-board RADIUS server. User accounts must be added for all users that should be authorized by the server.

<table>
<thead>
<tr>
<th>Username</th>
<th>Description</th>
</tr>
</thead>
</table>

20. Select **Add User** to display the dialog to enter user information to add to the RADIUS server user database.

![Add User Dialog](image)
21. Enter the following user information:
   - **Username** - Provide a user name to authenticate the user.
   - **Password** - Provide a password to authenticate the user.
   - **Confirm Password** - Confirm the password by entering the same password entered in the Password field.
   - **Description** - Provide a description to identify the user created in the RADIUS server database.

22. Select **Create** to create the entry in the RADIUS server database and add another user. Select **Create & Close** to create an entry in the RADIUS server database and close the Add User dialog.

23. Select **Modify User** within the RADIUS Server Configuration screen to modify information for an existing user.

   **Note** • The **Username** cannot be modified with this dialog.

24. Select **Delete User** on the RADIUS Server Configuration screen to remove information for an existing user. Select **Yes** to verify the removal.

25. Select **Cancel** to revert to the last saved configuration.
26. Select **Next**. The Typical Setup Wizard displays the **Summary and Commit** screen to summarize the screens (pages) and settings updated using the Typical Setup Wizard.

### Access Point Type Page

- **Access Point Type**: Standalone AP

### Networking Mode Page

- **Networking Mode**: Router Mode

### LAN Configuration Page

- **LAN Configuration Type**: Static IP Address/Subnet
- **VLAN ID for the LAN Interface**: 1
- **Static IP Address/Subnet**: 192.168.13.23/24

### WAN Configuration Page

- **WAN Configuration Type**: Use DHCP
- **Port to External**: GE1 Port

### WLAN Configuration

No user intervention or additional settings are required. It's an additional means of validating the Access Point's updated configuration before it's deployed. However, if a screen displays settings not intended as part of the initial configuration, then any screen can be selected again from within the Navigation Panel and its settings modified accordingly.

If the configuration displays as intended, select **Save/Commit** to implement these settings to the Access Point's configuration. If additional changes are warranted based on the summary, either select the target page from the **Navigational Panel**, or use the **Back** and **Next** buttons to scroll to the target screen.
4 AP-8533 Access Point Specifications

4.1 Electrical Characteristics
An AP-8533 Access Point has the following electrical characteristics:

<table>
<thead>
<tr>
<th>Operating Current &amp; Voltage</th>
<th>48VDC, 0.5A (AUX input voltage)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Power Supply</td>
<td>48VDC PWR-BGA48V45W0WW Power Supply</td>

<tr>
<td>Storage Altitude (max)</td>
<td>30,000 ft @ 12C</td>
</tr>
<tr>
<td>Electrostatic Discharge</td>
<td>ESD to ±12KV air and ±8KV contact</td>
</tr>
</tbody>
</table>
### 4.3 Radio Characteristics

The AP-8533 Access Point has the following radio characteristics:

| Data Rates Supported       | 802.11b/g: 1,2,5.5,11,6,9,12,18,24,36,48 and 54 Mbps |
|                          | 802.11a: 6,9,12,18,24,36,48, and 54 Mbps            |
|                          | 802.11n: MCS 0-31 up to 600Mbps                     |
|                          | 802.11ac: MCS 0-9 up to 1.733Gbps                  |
| Wireless Medium           | Direct Sequence Spread Spectrum (DSSS)             |
|                          | Orthogonal Frequency Division Multiplexing (OFDM)  |
|                          | Spatial Multiplexing (MIMO)                        |
| Network Standards         | IEEE 802.11a/b/g/n/ac, Wave 2                     |
|                          | 802.11d and 802.11i WPA2                          |
|                          | WMM and WMM-UAPSD                                  |
| Transmit Power Adjustment | 1dB increments                                     |
5 Regulatory Information

5.1 Regulatory Information

This guide applies to the following Model Numbers: AP-8533, AP-8533I.

All Zebra devices are designed to be compliant with the rules and regulations in the locations they are sold and will be labeled as required.

Local language translations are available at the following Website: www.zebra.com/support

Any changes or modifications to Zebra equipment, not expressly approved by Zebra could void the user's authority to operate the equipment.

Zebra devices are professionally installed, the Radio Frequency Output Power will not exceed the maximum allowable limit for the country of operation.

Antennas: Use only the supplied or an approved replacement antenna. Unauthorized antennas, modifications, or attachments could cause damage and may violate regulations.

This device is only to be used with a Zebra Wireless Switch.

For use only with Zebra approved and UL Listed mobile computers, Zebra approved, and UL Listed/Recognized battery packs.

Caution:

Only use Zebra approved and UL Listed accessories, battery packs, and battery chargers.

Do NOT attempt to charge damp/wet mobile computers or batteries. All components must be dry before connecting to an external power source.

Declared maximum operating temperature: 50°C.

5.1.1 Bluetooth Wireless Technology

This is an approved Bluetooth® product. For more information or to view the End Product Listing, please visit https://www.bluetooth.org/tpg/listings.cfm.

5.2 Wireless Device Country Approvals

Note: This section is only applicable to WW/WR/EU configurations.

Regulatory markings subject to certification are applied to the device signifying the radio(s) is/are approved for use in the following countries and continents:
United States, Canada, Japan, China, South Korea, Australia, Europe and Taiwan.

Please refer to the Declaration of Conformity (DoC) for details of other country markings. This is available at: www.zebra.com/doc

**Note:** Europe includes Austria, Belgium, Bulgaria, Croatia, Czech Republic, Cyprus, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Liechtenstein, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovak Republic, Slovenia, Spain, Sweden, Switzerland, and the United Kingdom.

**Caution:**

Operation of the device without regulatory approval is illegal.

### 5.2.1 Country Selection

Select only the country in which the device will be used. Any other selection will make the operation of this device illegal.

**Country Roaming**

This device incorporates the International Roaming feature (IEEE802.11d) which will ensure the product operates on the correct channels for the particular country of use.

### 5.2.2 Frequency of Operation – IC

5 GHz Only

**Industry Canada Statement:**

**Caution:** The device for the band 5150-5250 MHz is only for indoor usage to reduce potential for harmful interference to co-Channel mobile satellite systems. High power radars are allocated as primary users (meaning they have priority) of 5250-5350 MHz and 5650-5850 MHz and these radars could cause interference and/or damage to LE-LAN devices.

**Avertissement:** Le dispositif fonctionnant dans la bande 5150-5250 MHz est réservé uniquement pour une utilisation à l'intérieur afin de réduire les risques de brouillage préjudiciable aux systèmes de satellites mobiles utilisant les mêmes canaux.

Les utilisateurs de radars de haute puissance sont désignés utilisateurs principaux (c.-à-d., qu'ils ont la priorité) pour les bands 5250-5350 MHz et
5650-5850 MHz et que ces radars pourraient causer du brouillage et/ou des dommages aux dispositifs LAN-EL.

2.4 GHz Only

The available channels for 802.11bg operation in the US are Channels 1 to 11. The range of channels is limited by firmware.

5.3 **Warnings for Use of Wireless Devices**

**Caution:** Please observe all warning notices with regard to the usage of wireless devices.

5.3.1 **Potentially Hazardous Atmospheres - Vehicle Installation**

You are reminded of the need to observe restrictions on the use of radio devices in fuel depots, chemical plants etc. and areas where the air contains chemicals or particles (such as grain, dust, or metal powders).

5.3.2 **Potentially Hazardous Atmospheres - Fixed Installations**

You are reminded of the need to observe restrictions on the use of radio devices in fuel depots, chemical plants etc. and areas where the air contains chemicals or particles such as grain, dust, or metal powders.

5.3.3 **Safety in Aircraft**

Switch off your wireless device whenever you are instructed to do so by airport or airline staff. If your device offers a 'flight mode' or similar feature, consult airline staff as to its use in flight.

5.3.4 **Safety in Hospitals**

Wireless devices transmit radio frequency energy and may affect medical electrical equipment. When installed adjacent to other equipment, it is advised to verify that the adjacent equipment is not adversely affected.

Wireless devices transmit radio frequency energy and may affect medical electrical equipment.
Wireless devices should be switched off wherever you are requested to do so in hospitals, clinics, or healthcare facilities. These requests are designed to prevent possible interference with sensitive medical equipment.

Wireless devices transmit radio frequency energy and may affect medical electrical equipment. When installed adjacent to other equipment, it is advised to verify that the adjacent equipment is not adversely affected.

Pacemakers

Pacemaker manufacturers recommended that a minimum of 15cm (6 inches) be maintained between a handheld wireless device and a pacemaker to avoid potential interference with the pacemaker. These recommendations are consistent with independent research and recommendations by Wireless Technology Research.

Persons with Pacemakers:

- Should ALWAYS keep the device more than 15cm (6 inches) from their pacemaker when turned ON.
- Should not carry the device in a breast pocket.
- Should use the ear furthest from the pacemaker to minimize the potential for interference.
- If you have any reason to suspect that interference is taking place, turn OFF your device.

Other Medical Devices

Please consult your physician or the manufacturer of the medical device, to determine if the operation of your wireless product may interfere with the medical device.

5.4 RF Exposure Guidelines

5.4.1 Safety Information

Reducing RF Exposure - Use Properly

Only operate the device in accordance with the instructions supplied.

5.4.2 International

The device complies with internationally recognized standards covering human exposure to electromagnetic fields from radio devices. For information on “International” human exposure to electromagnetic fields refer to the Declaration of Conformity (DoC) at: www.zebra.com/doc.
5.4.3 EU

Remote and Standalone Antenna Configurations

To comply with EU RF exposure requirements, antennas that are mounted externally at remote locations or operating near users at stand-alone desktop of similar configurations must operate with a minimum separation distance of 40 cm from all persons.

5.4.4 US and Canada

Co-located statement

To comply with FCC RF exposure compliance requirements, the antenna used for this transmitter must not be co-located or operating in conjunction with any other transmitter/antenna except those already approved in this filling.

To satisfy US and Canadian RF exposure requirements, a transmitting device must operate with a minimum separation distance of 40 cm or more from a person's body.

Pour satisfaire aux exigences Américaines et Canadiennes d'exposition aux radiofréquences, un dispositif de transmission doit fonctionner avec une distance de séparation minimale de 40 cm ou plus de corps d'une personne.

Radiation Exposure Statement

This equipment complies with IC radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with minimum distance 40 cm between the radiator and your body.

NOTE IMPORTANTE: (Pour l'utilisation de dispositifs mobiles)

Déclaration d'exposition aux radiations:

Cet équipement est conforme aux limites d'exposition aux rayonnements IC établies pour un environnement non contrôlé. Cet équipement doit être installé et utilisé avec un minimum de 40 cm de distance entre la source de rayonnement et votre corps.

Remote and Standalone Antenna Configurations

To comply with FCC RF exposure requirements, Antennas that are mounted externally must be professionally installed at a fixed location and operate with a minimum distance of 40 cm from all persons.

To comply with FCC Antenna requirements, the Antenna must be adjusted such that the RF emission lobes are below 30 degrees elevation.
5.5 Power Supply

This device must be powered from a 802.3af or 802.3at compliant power source which has been certified by the appropriate agencies, or by a Zebra approved UL LISTED ITE (IEC/EN 60950-1, LPS/SELV) power supply with electrical ratings: Output 48 Vdc, min 0.75 A or 55 Vdc min 0.6 A, with a recommended ambient temperature greater than X degrees C. Use of alternative power supply will invalidate any approvals given to this unit and may be dangerous.

5.6 Radio Frequency Interference Requirements—FCC

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna
- Increase the separation between the equipment and receiver
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected
- Consult the dealer or an experienced radio/TV technician for help.

5.6.1 Radio Transmitters (Part 15)

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.
5.6.2 Radio Frequency Interference Requirements - Canada

CAN ICES-3 (B)/NMB-3(B)

Radio Transmitters

For RLAN Devices:

The use of 5 GHz RLAN's, for use in Canada, have the following restrictions:

• Restricted Band 5.60 – 5.65 GHz

This device complies with Industry Canada's licence-exempt RSSs. Operation is subject to the following two conditions: (1) This device may not cause interference; and (2) This device must accept any interference, including interference that may cause undesired operation of the device.

Cet appareil est conforme exempts de licence le flux RSS de Industrie Canada. Son fonctionnement est soumis aux deux conditions suivantes:

(1) Ce dispositif ne peut causer des interférences; et (2) Cet appareil doit accepter toute interférence, y compris les interférences qui peuvent causer un mauvais fonctionnement de l'appareil.

Label Marking: The Term "IC:" before the radio certification only signifies that Industry Canada technical specifications were met.

In accordance with the regulations of Industry Canada, this radio transmitter can operate with an antenna of a type and a maximum gain (or lower) approved for the transmitter by Industry Canada. With the aim of reducing the risk of radio interference to other users, the chosen antenna type and its gain should be selected so that the equivalent isotropically radiated power (e.i.r.p.) does not exceed the intensity necessary for the establishment of a satisfactory connection.

Conformément à la réglementation d'Industrie Canada, le présent émetteur radio peut fonctionner avec une antenne d'un type et d'un gain maximal (ou inférieur) approuvé pour l'émetteur par Industrie Canada. Dans le but de réduire les risques de brouillage radioélectrique à l'intention des autres utilisateurs, il faut choisir le type d'antenne et son gain de sorte que la puissance isotrope rayonnée équivalente (p.i.r.e.) ne dépasse pas l'intensité nécessaire à l'établissement d'une communication satisfaisante.

In compliance with respective local regulatory law, AP software provides professional installers the option to configure the antenna type and antenna gain for approved antennas.

This radio transmitter (AP-8533I and AP-8533) has been approved by Industry Canada to operate with the antenna types listed below and having a maximum
gain allowable and the impedance required for each type of antenna. The antenna types not included in this list, or whose gain is higher than the maximum gain indicates, are strictly prohibited for the operation of the transmitter.

Refer to *AP-8533 Antennas on page 9* for a listing of the 2.4 GHz and 5 GHz antennas initially approved for use with AP-8533 and AP-8533I Access Points.

Le présent émetteur radio (AP-8533, AP-8533I) a été approuvé par Industrie Canada pour fonctionner avec les types d'antenne énumérés ci-dessous et ayant un gain admissible maximal et l'impédance requise pour chaque type d'antenne. Les types d'antenne non inclus dans cette liste ou dont le gain est supérieur au gain maximal indiqué, sont strictement interdits pour l'exploitation de l'émetteur.

5.7 **CE Marking and European Economic Area (EEA)**

**WARNING:** This is a Class B product. In a domestic environment this product may cause radio interference in which case the user may be required to take adequate measures.

The use of 2.4GHz RLAN’s, for use through the EEA, have the following restrictions:

- Maximum radiated transmit power of 100 mW EIRP in the frequency range 2.400 - 2.4835 GHz.

Bluetooth® Wireless Technology for use through the EEA has the following restrictions:

- Maximum radiated transmit power of 100 mW EIRP in the frequency range 2.400 - 2.4835 GHz.

5.8 **Statement of Compliance**

Zebra hereby, declares that this device is in compliance with the essential requirements and other relevant provisions of Directive 1999/5/EC. A Declaration of Conformity may be obtained from [www.zebra.com/doc](http://www.zebra.com/doc).

5.11 Other Countries

All 2.4GHz and 5GHz Wireless Devices:

Australia

Use of 5GHz RLAN's in Australia is restricted in the following band 5.50 – 5.65GHz.

Brazil (UNWANTED EMISSIONS - ALL PRODUCTS)

Regulatory declarations for AP-8533I, AP-8533 - BRAZIL

For more information consult the website [www.anatel.gov.br](http://www.anatel.gov.br).

Este equipamento opera em caráter secundário, isto é, não tem direito a proteção contra interferência prejudicial, mesmo de estações do mesmo tipo, e não pode causar interferência a sistemas operando em caráter primário.

Este produto está homologado pela Anatel, de acordo com os procedimentos regulamentados pela Resolução n°242/2000 e atende aos requisitos técnicos aplicados, incluindo os limites de exposição da Taxa de Absorção Específica referente a campos elétricos, magnéticos e eletromagnéticos de radiofrequência, de acordo com as Resoluções n° 303/2002 e 533/2009.
Este dispositivo está em conformidade com as diretrizes de exposição à radiofrequência quando posicionado pelo menos 25 centímetros de distância do corpo. Para maiores informações, consulte o site da Anatel.

Chile
Este equipo cumple con la Resolución No 403 de 2008, de la Subsecretaria de telecomunicaciones, relativa a radiaciones electromagnéticas.

China

Hong Kong
In accordance with HKTA1039, the band 5.15GHz - 5.35GHz is for indoor operation only.

Mexico
Restrict Frequency Range to: 2.450 – 2.4835 GHz.

La operación de este equipo está sujeta a las siguientes dos condiciones: (1) es posible que este equipo o dispositivo no cause interferencia perjudicial y (2) este equipo o dispositivo debe aceptar cualquier interferencia, incluyendo la que pueda causar su operación no deseada.

S. Korea
For a radio equipment using 2400~2483.5MHz or 5725~5825MHz, the following two expression should be displayed;

低功率電波輻射性電機管理辦法

第十二條
經型式認證合格之低功率射頻電機，非經許可，公司、商號或使用者均不得擅自變更頻率、加大功率或變更設計之特性及功能。

第十四條
低功率射頻電機之使用不得影響飛航安全及干擾合法通信；經發現有干擾現象時，應立即停用，並改善至無干擾時方得繼續使用。
前項合法通信，指依電信規定作業之無線電通信。
低功率射頻電機須忍受合法通信或工業、科學及醫療用電波輻射性電機設備之干擾。

電磁波曝露量MPE標準值1mW/cm²，本產品使用時建議應距離人體：40 cm

6 Support

If you have a problem with your equipment, contact support for your region.
Contact information is available at: www.zebra.com/support

When contacting support, please provide the following information:
• Serial number of the unit
• Model number or product name
• Software type and version number

Support responds to calls by e-mail, telephone, or fax within the time limits set forth in support agreements. If you purchased your product from a business partner, contact that business partner for support.

Customer Support Web Sites

The Support site, located at www.zebra.com/support provides information and online assistance including developer tools, software downloads, product manuals and online repair requests.

7 Zebra Technologies Inc. End-User Software License Agreement

BY INSTALLING AND/OR USING THIS PRODUCT, YOU ACKNOWLEDGE THAT YOU HAVE READ THIS AGREEMENT, UNDERSTAND IT AND AGREE TO BE BOUND ITS TERMS. IF YOU DO NOT AGREE TO THE TERMS OF THIS AGREEMENT, ZEBRA IS NOT WILLING TO LICENSE THE PRODUCT TO YOU, AND YOU MUST NOT INSTALL OR USE THIS PRODUCT.

Definitions

Grant of License

Zebra Technologies Corporation ("Zebra") grants you ("Licensee" or "you") a personal, nonexclusive, nontransferable, revocable, nonassignable, limited license to use the software and documentation ("Product(s)") subject to the terms and conditions of this Agreement. You shall use the Products only for your internal business purposes, exclusively to support Zebra devices. Any use of the Products outside of the conditions set forth herein is strictly prohibited and will be deemed a breach of this Agreement resulting in immediate termination of your License. In the event of a breach of this Agreement, Zebra will be entitled to all available remedies at law or in equity (including immediate termination of the license without notice, immediate injunctive relief and repossession of all Products unless Licensee is a Federal agency of the United States Government).

You shall not distribute, sublicense, rent, loan, lease, export, re-export, resell, ship or divert or cause to be exported, re-exported, resold, shipped or diverted, directly or indirectly, the Products under this Agreement. You shall not, and shall not permit others to: (i) modify, translate, decompile, bootstrap, reverse engineer, disassemble, or extract the inner workings of the Products, (ii) copy the look-and-feel or functionality of the Products; (iii) remove any proprietary notices, marks, labels, or logos from the Products; (iv) rent or transfer all or some of the Products to any other party without Zebra’s prior written consent; or (v) utilize any computer software or hardware which is designed to defeat any copy protection device, should the Products be equipped with such a protection device.

Title to all copies of Products will not pass to Licensee at any time and remains vested exclusively in Zebra. All intellectual property developed, originated, or prepared by Zebra in connection with the Products remain vested exclusively in Zebra, and this Agreement does not grant to Licensee any intellectual property rights.

Portions of the Products are protected by United States patent and copyright laws, international treaty provisions, and other applicable laws. Therefore, you must treat the Products like any other copyrighted material (e.g., a book or musical recording) except that you may make one copy of the Product solely for back-up purposes. Unauthorized duplication of the Products constitutes copyright infringement, and in the United States is punishable in federal court by fine and imprisonment.
Limited Warranty

Zebra warrants for a period of ninety (90) days from your receipt of the Products to you that the Software, under normal use, will perform substantially in accordance with Zebra’s published specifications for that release level of the Software. The written materials are provided “AS IS” and without warranty of any kind. Zebra’s entire liability and your sole and exclusive remedy for any breach of the foregoing limited warranty will be, at Zebra’s option, the provision of a downloadable patch or replacement code, or a refund of the unused portion of your bargained for contractual benefit up to the amount paid for the Products.

Disclaimer

THIS LIMITED WARRANTY IS THE ONLY WARRANTY PROVIDED BY ZEBRA, AND ZEBRA MAKES, AND YOU RECEIVE, NO OTHER WARRANTIES OF ANY KIND, WHETHER EXPRESS, IMPLIED, STATUTORY, OR IN ANY COMMUNICATION WITH YOU. ZEBRA SPECIFICALLY DISCLAIMS ANY WARRANTY INCLUDING THE IMPLIED WARRANTIES OF MERCHANTABILITY, NONINFRINGEMENT, OR FITNESS FOR A PARTICULAR PURPOSE. ZEBRA DOES NOT WARRANT THAT THE PRODUCTS WILL MEET YOUR REQUIREMENTS, OR THAT THE OPERATION OF THE PRODUCTS WILL BE UNINTERRUPTED OR ERROR FREE, OR THAT DEFECTS IN THE PRODUCTS WILL BE CORRECTED. ZEBRA MAKES NO WARRANTY WITH RESPECT TO THE CORRECTNESS, ACCURACY, OR RELIABILITY OF THE PRODUCTS. Some jurisdictions do not allow the exclusion of implied warranties, so the above exclusion may not apply to you.

Limitation of Liability

THE TOTAL LIABILITY OF ZEBRA UNDER THIS AGREEMENT FOR DAMAGES SHALL NOT EXCEED THE FAIR MARKET VALUE OF THE PRODUCTS LICENSED UNDER THIS AGREEMENT. IN NO EVENT WILL ZEBRA BE LIABLE IN ANY WAY FOR INCIDENTAL, CONSEQUENTIAL, INDIRECT, SPECIAL OR PUNITIVE DAMAGES OF ANY NATURE, INCLUDING WITHOUT LIMITATION, LOST BUSINESS PROFITS, OR LIABILITY OR INJURY TO THIRD PERSONS, WHETHER FORESEEABLE OR NOT, REGARDLESS OF WHETHER ZEBRA HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES. Some jurisdictions do not permit limitations of liability for incidental or consequential damages, so the above exclusions may not apply to you. This Limitation of Liability provision survives the termination of this Agreement and applies notwithstanding any contrary provision in this Agreement. Licensee must bring any action under this Agreement within one (1) year after the cause of action arises.

Maintenance

Unless provided for in a separate agreement, Zebra shall not be responsible for maintenance or field service of the Products.
**High Risk Activities**

The Products are not fault-tolerant and are not designed, manufactured or intended for use or resale as on-line control software in hazardous environments requiring fail-safe performance, such as in the operation of nuclear facilities, aircraft navigation or communication systems, air traffic control, direct life support machines, or weapons systems, in which the failure of the Products could lead directly to death, personal injury, or severe physical or environmental damage ("High Risk Activities"). Zebra and its suppliers specifically disclaim any express or implied warranty of fitness for High Risk Activities, and if you elect to use the Products in any High Risk Activities, you agree to indemnify, defend, and hold Zebra harmless from and against any and all costs, damages, and losses related to that use.

**U.S. Government**

If you are acquiring the Products on behalf of any unit or agency of the U.S. Government, the following shall apply. Use, duplication, or disclosure of the Products is subject to the restrictions set forth in subparagraphs (c) (1) and (2) of the Commercial Computer Software - Restricted Rights clause at FAR 52.227-19 (JUNE 1987), if applicable, unless being provided to the Department of Defense. If being provided to the Department of Defense, use, duplication, or disclosure of the Products is subject to the restricted rights set forth in subparagraph (c) (1) (ii) of the Rights in Technical Data and Computer Software clause at DFARS 252.227-7013 (OCT 1988), if applicable. Products may or may not include a Restricted Rights notice, or other notice referring specifically to the terms and conditions of this Agreement. The terms and conditions of this Agreement shall each continue to apply, but only to the extent that such terms and conditions are not inconsistent with the rights provided to you under the aforementioned provisions of the FAR and DFARS, as applicable to the particular procuring agency and procurement transaction.

**Assignment**

Except as otherwise provided in this section, neither party may assign this Agreement, or any of its rights or obligations under this Agreement, without the prior written approval of the other party, which will not be unreasonably withheld. Any attempted assignment, delegation, or transfer without the necessary approval will be void. Notwithstanding the foregoing, for any Zebra acquisition, merger, consolidation, reorganization, or similar transaction, or any spin-off, divestiture, or other separation of a Zebra business, Zebra may, without the prior written consent of the other party: (i) assign its rights and obligations under this Agreement, in whole or in part, or (ii) split and assign its rights and obligations under this Agreement so as to retain the benefits of this Agreement for both Zebra and the assignee entity(ies) (and their respective Affiliates) following the split.

**Governing Law**

This Agreement shall be governed by the laws of the United States of America to the extent that they apply and otherwise by the laws of the State of New York without regard to its conflict of laws provisions or by the internal substantive laws of the country to which the Products is shipped if end-user customer is a sovereign governmental entity. The terms of the U.N. Convention on Contracts for the
International Sale of Goods do not apply. In the event that the Uniform Computer information Transaction Act, any version of this Act, or a substantially similar law (collectively "UCITA") becomes applicable to a Party’s performance under this Agreement, UCITA does not govern any aspect of this End User License Agreement or any license granted under this End-User License Agreement, or any of the parties’ rights or obligations under this End User License Agreement. The governing law will be that in effect prior to the applicability of UCITA.

**Compliance with Laws**

Licensee will comply with all applicable laws and regulations, including export laws and regulations of the United States. Licensee will not, without the prior authorization of Zebra and the appropriate governmental authority of the United States, in any form export or re-export, sell or resell, ship or reship, or divert, through direct or indirect means, any item or technical data or direct or indirect products sold or otherwise furnished to any person within any territory for which the United States Government or any of its agencies at the time of the action, requires an export license or other governmental approval. Violation of this provision will be a material breach of this Agreement, permitting immediate termination by Zebra.

**Third Party Software**

The Products may contain one or more items of Third-Party Software. The terms of this Agreement govern your use of any Third-Party Software UNLESS A SEPARATE THIRD-PARTY SOFTWARE LICENSE IS INCLUDED, IN WHICH CASE YOUR USE OF THE THIRD-PARTY SOFTWARE WILL THEN BE GOVERNED BY THE SEPARATE THIRD-PARTY LICENSE.

**Open Source Software**

The Products may contain one or more items of Open Source Software. Open Source Software is software covered by a publicly available license governed solely under Copyright law, whereas the complete terms and obligations of such license attach to a licensee solely through the act of copying, using and/or distribution of the licensed software, such obligations often include one or more of attribution obligations, distribution obligations, copyleft obligations, and intellectual property encumbrances. The use of any Open Source Software is subject to the terms and conditions of this Agreement as well as the terms and conditions of the corresponding license of each Open Source Software package. If there is a conflict between the terms and conditions of this Agreement and the terms and conditions of the Open Source Software license, the applicable Open Source Software license will take precedence. Copies of the licenses for the included Open Source Software, if any, as well as their attributions, acknowledgements, and software information details, are provided in the electronic copy of this Agreement, which is available in the Legal Notices or README file associated with the Product. Zebra is required to reproduce the software licenses, acknowledgments and copyright notices as provided by the authors and owners, thus, all such information is provided in its native language form, without modification or translation. Depending on the license terms of the specific Open Source Software, source code may not be provided. Please reference and review the entire Open Source
Software information to identify which Open Source Software packages have source code provided or available. For instructions on how to obtain a copy of any source code made publicly available by Zebra related to Open Source Software distributed by Zebra, you may send your request (including the Zebra Product name and version, along with the Open Source Software specifics) in writing to: Zebra Technologies Corporation, Open Source Software Director, Legal Department, 3 Overlook Point, Lincolnshire, IL 60069 USA.
