**Support**                                                                 | 32   |

**AP-650 Access Point China ROHS Compliance**                            | 33   |
1 Introduction

The AP650 access point links wireless 802.11a/b/g/n devices to the controller, enabling growth of your wireless network with a cost-effective alternative to standard Access Points. The AP650 access point provides two placement options: wall and ceiling. Wall mount slots fit onto two screws provided. Arrows on the case guide placement of the screws. For placement above a suspended ceiling, a safety wire tie point on the case provides for a loop of safety wire. The light pipe fits through a hole in the ceiling tile to provide a view of the unit’s status lights.

The AP650 access point receives all power and transfers data through the same CAT-5 or better Ethernet cable. There is no additional power supply required. An 802.3af Ethernet switch, PoE enabled controller or power injector is required.

1.1 Document Conventions

The following graphical alerts are used in this document to indicate notable situations:

- **NOTE** Tips, hints, or special requirements that you should take note of.

- **CAUTION** Care is required. Disregarding a caution can result in data loss or equipment malfunction.

- **WARNING!** Indicates a condition or procedure that could result in personal injury or equipment damage.

1.2 Warnings

- Read all installation instructions and site survey reports, and verify correct equipment installation before connecting the AP650 Access Point.
- Remove jewelry and watches before installing this equipment.
- Verify that the unit is grounded before connecting it to the power source.
- Verify that any device connected to this unit is properly wired and grounded.
- Verify there is adequate ventilation around the device, and that ambient temperatures meet equipment operation specifications.

1.3 Site Preparation

- Consult your site survey and network analysis reports to determine specific equipment placement, power drops, and so on.
- Assign installation responsibility to the appropriate personnel.
- Identify and document where all installed components are located.
- Ensure adequate, dust-free ventilation to all installed equipment.
- Identify and prepare Ethernet and console port connections.
- Verify that cable lengths are within the maximum allowable distances for optimal signal transmission.
1.4 AP650 Package Contents
The AP650 model Access Point comes in four configurations, two Integrated Antenna models and two External Antenna models. The contents of the package differ between the Integrated Antenna model and the External Antenna model.

1.4.1 External Antenna Model Package Contents
- AP650 access point with external antenna connectors (Plenum Rated)
- Two wall mount screws
- Two wall anchors
- Light pipe
- Badge for light pipe
- AP650 Installation Guide (This Guide)

1.4.2 Integrated Antenna Model Package Contents
- AP650 access point with integrated antennas
- Two wall mount screws
- Two wall anchors
- AP650 Installation Guide (This Guide)
1.5 Features

- One RJ-45 connector
- LED indicators
- Safety wire tie point
- Slots for wall mounting
- Clips for mounting on a suspended ceiling T-bar
- Lock port for Kensington® style Security Lock

The AP650 access point has one RJ-45 connector supporting an 10/100/1000 Ethernet port and requires 802.3af-compliant power from an external source.

NOTE When operating in a Gigabit Ethernet environment CAT-5e or CAT-6 cable is required for Gigabit operation.

The AP650 Access Point comes in both single and dual radio versions both supporting 802.11a/b/g/n.

The Access Point contains runtime firmware which enables the unit to boot after either a power up or a watchdog reset. The runtime firmware on the Access Point and the firmware downloaded from the controller can be updated via the Ethernet interface from the controller.
2 Hardware Installation

2.1 Installation Instructions
The AP650 Access Point mounts either on a wall with wide-shoulder screws or on a suspended ceiling T-bar. This unit is not designed for mounting on a desk.

To prepare for installation, perform the following steps:

1. Match the model number on the purchase order with the model numbers in the packing list and on the case of the device shipped.
2. Verify the contents of the box include the intended AP650 Access Point and that the included hardware matches the package contents on page 5.
3. Review site survey and network analysis reports to determine the location and mounting position for the AP650 Access Point.
4. Connect a CAT-5 or better Ethernet cable to a compatible 802.3af power source and run the cable to the installation site. Ensure that there is sufficient slack on the cable to perform the installation steps.

2.2 Precautions
Before installing an AP650 model Access Point, verify the following:

- Do not install the AP650 in wet or dusty areas.
- Verify the environment has a continuous temperature range between 0° C to 50° C.

NOTE In the above part numbers XX represents the 2-digit country code which specifies which country the model is designed for. A country code of "WW" represents a world wide model.

NOTE When operating in a Gigabit Ethernet environment CAT-5e or CAT-6 cable is required for Gigabit operation.
2.3 Access Point Placement
For optimal performance, install the Access Point away from transformers, heavy-duty motors, fluorescent lights, microwave ovens, refrigerators and other industrial equipment. Signal loss can occur when metal, concrete, walls or floors block transmission. Install the Access Point in an open area or add Access Points as needed to improve coverage.

Antenna coverage is analogous to lighting. Users might find an area lit from far away to be not bright enough. An area lit sharply might minimize coverage and create dark areas. Uniform antenna placement in an area (like even placement of a light bulb) provides even, efficient coverage.

Place the Access Point using the following guidelines:
- Install the Access Point at an ideal height of 10 feet from the ground.
- Orient the Access Point antennas vertically for best reception.

To maximize the Access Point’s radio coverage area, conduct a site survey to define and document radio interference obstacles before installing the Access Point.

2.4 Integrated Antenna Model Wall Mount Instructions
This mounting requires hanging the AP650 Access Point along its width or length using the two slots on the bottom of the unit. The AP650 can be mounted on to any plaster, wood, or cement wall surface using the provided wall anchors when necessary. The illustration on the next page shows a lengthwise mount.

2.4.1 Wall Mount Hardware
- Two wide-shoulder Phillips pan head self-tapping screws
- Two wall anchors
- Security cable (optional)

NOTE In the event that the original mounting screws are lost, the following screws can be used instead: (ANSI Standard) #6-18 X 0.875in. Type A or AB Self-Tapping Screw, or (ANSI Standard Metric) M3.5 X 0.6 X 20mm Type D Self-Tapping Screw.
2.4.2 Wall Mount Procedure

1. Orient the case on the wall by its width or length.

2. Using the arrows on one edge of the case as guides, move the edge to the midline of the mounting area and mark points on the midline for the screws.

**CAUTION** To ensure proper operation of the AP650 Access Point ensure that the thin Access Point is mounted in the correct orientation as shown above.
3. At each point, drill a hole in the wall, insert an anchor, screw into the anchor the wall mounting screw and stop when there is 1mm between the screw head and the wall.

**NOTE**  When pre-drilling a hole the recommended hole size is 2.8mm (0.11in.) if the screws are going directly into the wall and 6mm (0.23in.) if the provided wall anchors are being used.

4. If required, install and attach a security cable to the unit’s lock port.
5. Attach the Ethernet cable to the unit and to a controller with an 802.3af-compatible power source.
6. Place the middle of each of the case’s mount slots over the screw heads.
7. Slide the case down along the mounting surface to hang the mount slots on the screw heads.
8. Verify the unit has power by observing that the LEDs are lit or flashing.
# 2.5 Integrated Antenna Model Suspended Ceiling T-Bar Mount Instructions

Ceiling mount requires holding the AP650 Access Point up against a T-bar of a suspended ceiling grid and twisting the case onto the T-bar.

## 2.5.1 Suspended Ceiling Mount Procedure

1. If required, install and attach a security cable to the unit’s lock port.
2. Plug the Ethernet cable into the unit and to a controller with an 802.3af-compatible power source.
3. Face the bottom of the T-bar with the back of the case.
4. Orient the case by its length and the length of the T-bar.
5. Rotate the case in place 45 degrees clockwise, or about 10 o’clock.
6. Push the back of the case onto the bottom of the T-bar.
7. Rotate the case 45 degrees counter-clockwise. The clips click as they fasten to the T-bar.
8. Verify the unit has power by observing the LEDs.

# 2.6 External Antenna Model Wall Mount Instructions

Wall mounting requires hanging the AP650 access point along its width or length using the pair of slots on the bottom of the unit. The AP650 can be mounted onto any plaster, wood, or cement wall surface using the provided wall anchors when necessary. The illustration shows a lengthwise mount.

## 2.6.1 Wall Mount Hardware

- Two wide-shoulder Phillips pan head self-tapping screws
Two wall anchors
Safety wire (recommended) and security cable (optional)

**NOTE** In the event that the original mounting screws are lost, the following screws can be used instead: (ANSI Standard) #6-18 X 0.875in. Type A or AB Self-Tapping Screw, or (ANSI Standard Metric) M3.5 X 0.6 X 20mm Type D Self-Tapping Screw.

### 2.6.2 Wall Mount Procedure

1. Orient the case on the wall by its width or length.
2. Using the arrows on one edge of the case as guides, move the edge to the midline of the mounting area and mark points on the midline for the screws.
3. At each point, drill a hole in the wall, insert an anchor, screw into the anchor the wall mounting screw and stop when there is 1mm between the screw head and the wall.

**NOTE** When pre-drilling a hole the recommended hole size is 2.8mm (0.11in.) if the screws are going directly into the wall and 6mm (0.23in.) if the provided wall anchors are being used.
4. If required, loop a safety wire, between 1.5mm (.06in.) and 2.5mm (.10in.) in diameter, around the tie post and secure the loop.
5. If required, install and attach a security cable to the unit’s lock port.
6. Place the large corner of each of the case’s mount slots over the screw heads.
7. Slide the case down along the mounting surface to hang the mount slots on the screw heads.
8. Attach appropriate antennas to the connectors.
9. Attach the Ethernet cable to the unit and to a controller with an 802.3af compatible power source.
10. Verify the unit has power by observing that the LEDs are lit or flashing.

2.7  **External Antenna Model Suspended Ceiling Tile (Plenum) Mount Instructions**

Ceiling mount requires placing the AP650 access point above a suspended ceiling and installing the provided light pipe for viewing the status lights of the unit.

<table>
<thead>
<tr>
<th><strong>NOTE</strong></th>
<th>Notes or warnings about suspended ceiling mounts apply to all installations where the unit is placed on suspended ceiling tile. The case has a safety wire tie point for a standard safety wire.</th>
</tr>
</thead>
</table>

<table>
<thead>
<tr>
<th><strong>CAUTION</strong></th>
<th>Do not mount the AP650 access point directly to any suspended ceiling tile with a thickness less than 12.7mm (0.5in.) or a suspended ceiling tile with an unsupported span greater than 660mm (26in.). Fit the AP650 access point with a safety wire suitable for the specific installation. The safety wire should be a standard ceiling suspension cable or equivalent steel wire between 1.59mm (.062in.) and 2.5mm (.10in.) in diameter.</th>
</tr>
</thead>
</table>

This placement requires installation of the provided light pipe for viewing the status lights of the unit.

2.7.1  **Suspended Ceiling Mount Hardware**

- Light pipe
- Badge for light pipe
- Safety wire (recommended) and security cable (optional)
2.7.2 Ceiling Mount Procedure

1. If possible, remove the ceiling tile from its frame and place it, finished side down, on a work surface.
2. If required, install a safety wire, between 1.5mm (.06in.) and 2.5mm (.10in.) in diameter, in the ceiling space.
3. If required, install and attach a security cable to the unit’s lock port.
4. Mark a point on the upper or unfinished side of the tile.
5. Push the light pipe through the tile at the mark and remove the light pipe. If necessary, use a drill to make a hole in the tile.
6. Attach appropriate antennas to the connectors.
7. Snap the clips of the light pipe into the bottom of the case.
8. Fit the light pipe into hole in the tile from its unfinished side.
9. Attach any safety wire to the safety wire tie point or security cable to the unit’s lock port.
10. Bring the tile into the ceiling space.
11. Plug the Ethernet cable into the unit and to a controller with an 802.3af-compatible power source.
12. Verify the unit has power by observing the LEDs.
13. Place the ceiling tile back in its frame.
14. Snap the badge onto the light pipe from the finished side of the tile.
2.8 AP650 External Antenna Model Antenna Options

Select an antenna model best suited to the intended operational environment of your Access Point.

On single radio versions, the R-SMA connectors can support both bands and should be connected to a R-SMA dual-band antenna or an appropriate single band antenna.

The 2.4 GHz antenna suite includes the following models:

<table>
<thead>
<tr>
<th>Part Number</th>
<th>Antenna Type</th>
</tr>
</thead>
<tbody>
<tr>
<td>ML-2499-HPA3-01R</td>
<td>Omni-Directional Antenna</td>
</tr>
<tr>
<td>ML-2499-SD3-01R</td>
<td>Patch Antenna</td>
</tr>
<tr>
<td>ML-2452-APA2-01</td>
<td>Dual-Band</td>
</tr>
<tr>
<td>ML-2452-PNA5-01R</td>
<td>Panel Antenna</td>
</tr>
<tr>
<td>ML-2452-PTA3M3-036</td>
<td>Omni-Directional Antenna</td>
</tr>
</tbody>
</table>

The 5 GHz antenna suite includes the following models:

<table>
<thead>
<tr>
<th>Part Number</th>
<th>Antenna Type</th>
</tr>
</thead>
<tbody>
<tr>
<td>ML-5299-HPA1-01R</td>

</tr>
<tr>
<td>ML-2452-PTA3M3-036</td>
<td>Omni-Directional Antenna</td>
</tr>
</tbody>
</table>

For up-to-date information on supported antennas and antenna specifications, please see the Antenna Specification Guide available on the support site.
2.9 LED Indicators

Both the Integrated Antenna model and the External Antenna model have LED activity indicators on the front of the case for use with wall mount. With the External Antenna model unit mounted above a ceiling, LEDs are at the center of an oval badge on the ceiling; a light pipe enables viewing the back LEDs through the ceiling tile.

The LEDs provide a status display indicating error conditions, transmission, and network activity for the 5 GHz 802.11a/n (amber) radio or the 2.4 GHz 802.11b/g/n (green) radio.

The LED behavior is determined by the version of WiNG software running on the controller which the Access Point is connected to. The tables below show the LED patterns for WiNG 4.x and WiNG 5.x.

### 2.9.1 WiNG 4.x LED States

<table>

3 Specifications

3.1 AP650 External Antenna Model Electrical Characteristics
An AP650 External Antenna model Access Point has the following electrical characteristics:

Operating Current & Voltage 180ma- 270ma @ 48VDC

3.2 AP650 External Antenna Model Physical Characteristics
An AP650 External Antenna model Access Point has the following physical characteristics:

Dimensions 8.50 in. Depth x 5.5 in. Width x 1.5 in. Height
21.59 cm Depth x 13.97 cm Width x 3.81 cm Height

Housing Metal

Weight 2.5 lbs / 1.13 kg

Operating Temperature 32°F to 122°F/0°C to 50°C

Storage Temperature -40°F to 158°F/-40°C to 70°C

Operating Humidity 5 to 95% Relative Humidity non-condensing

Storage Humidity 85% Relative Humidity non-condensing

Operating Altitude (max) 8,000 ft @ 28C

Storage Altitude (max) 30,000 ft @ 12C

Electrostatic Discharge +/-15kV Air and +/-8kV Contact @ 50% Relative Humidity
### 3.3 AP650 Integrated Antenna Model Electrical Characteristics

An AP650 Integrated model Access Point has the following electrical characteristics:

| Operating Current & Voltage | 180ma-270ma @ 48VDC |

### 3.4 AP650 Integrated Antenna Model Physical Characteristics

An AP650 Integrated Antenna model Access Point has the following physical characteristics:

| Dimensions | 9.50 in. Depth x 7.5 in. Width x 1.9 in. Height |
| Housing    | Plastic                                        |
| Weight     | 2.0 lbs / 0.91 kg                              |
| Operating Temperature | 32°F to 122°F/0°C to 50°C |
| Storage Temperature   | -40°F to 158°F/-40°C to 70°C |
| Operating Humidity    | 5 to 95% Relative Humidity non-condensing       |
| Storage Humidity      | 85% Relative Humidity non-condensing            |
| Operating Altitude (max) | 8,000 ft @ 28C                               |
| Storage Altitude (max) | 30,000 ft @ 12C                               |
| Electrostatic Discharge | +/-15kV Air and +/-8kV Contact @ 50% Relative Humidity |
3.5 Radio Characteristics
An AP650 model Access Point has the following radio characteristics:

**Operating Channels**: All channels from 4920 MHz to 5825 MHz except channel 52-64.
Channels 1-13 (2412-2472 MHz)
Channel 14 (2484 MHz) Japan only
Actual operating frequencies depend on regulatory approval for the country of use.

**Data Rates Supported**: 802.11g: 1, 2, 5.5, 11, 6, 9, 12, 18, 24, 36, 48, and 54Mbps
802.11a: 6, 9, 12, 18, 24, 36, 48, and 54Mbps
802.11n: MCS 0-15 up to 300Mbps

**Wireless Medium**: Direct Sequence Spread Spectrum (DSSS),
Orthogonal Frequency Division Multiplexing (OFDM)
Spatial multiplexing (MIMO)

**Network Standards**: 802.11a, 802.11b, 802.11g, 802.3, 802.11n (Draft 2.0)

**Maximum Available Transmit Power**: Maximum available conducted transmit power per chain:
2.4 GHz: 21dBm
Maximum available conducted transmit power all chains:
2.4 GHz: 24dBm
Maximum available conducted transmit power per chain:
5 GHz: 19dBm
Maximum available conducted transmit power all chains:
5 GHz: 22dBm

**Transmit Power Adjustment**: 1dB increments

**Antenna Configuration**: 2x3 MIMO (transmit on two and receive on all three antennas)
4 Regulatory Information

This guide applies to Model Number AP-650

All Zebra devices are designed to be compliant with rules and regulations in locations they are sold and will be labeled as required.

Local language translations are available at the following website: www.zebra.com/support

Any changes or modifications to Zebra equipment, not expressly approved by Zebra, could void the user’s authority to operate the equipment.

Zebra devices must be professionally installed and configured so that the Radio Frequency Output Power will not exceed the maximum allowable limit for the country of operation.

WARNING: Antennas: Use only the supplied or an approved replacement antenna. Unauthorized antennas, modifications, or attachments could cause damage and may violate regulations. Use of and unapproved antenna is illegal under FCC regulations subjecting the end user to fines and equipment seizure.

Radio Modules

This Access Point contains approved radio module(s) MB82. These module(s) are identified below.

MB82 – a DFS Master WLAN 802.11 abgn MIMO 2x3 radio module.

4.1 Wireless Device Country Approvals

Regulatory markings, subject to certification, are applied to the device signifying the radio(s) is/are approved for use in the following countries: United States, Canada, Japan, China, S. Korea, Australia, and Europe.

Please refer to the Declaration of Conformity (DoC) for details of other country markings. This is available at www.zebra.com/doc.

Note: For 2.4GHz or 5GHz Products: Europe includes, Austria, Belgium, Bulgaria, Czech Republic, Cyprus, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Liechtenstein, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovak Republic, Slovenia, Spain, Sweden, Switzerland and the United Kingdom.

Operation of the device without regulatory approval is illegal.

4.1.1 Country Selection – Note for AP & Wireless Controllers

Select only the country in which you are using the device. Any other selection will make the operation of this device illegal. The US version of the Access Point will only have US listed in the country selection table. The US version will be sold / used in the US protectorates: American Samoa, Guam, Puerto Rico, US Virgin Islands.
4.1.2 Frequency of Operation – FCC and IC

5 GHz Only
The use on UNII (Unlicensed National Information Infrastructure) Band 1 5150-5250 MHz and Band 3 5470 - 5725 MHz is restricted to indoor use only, any other use will make the operation of this device illegal.

Devices using the 5470 – 5725 MHz band shall not be capable of transmitting in the band 5600 - 5650 MHz in the US, this “Notched” band has been disabled in the US version of the Access Point.

The available channels for 802.11 b/g operation in the US are Channels 1 to 11. The range of channels is limited by firmware.

2.4 GHz Only
The available channels for 802.11 b/g operation in the US are Channels 1 to 11. The range of channels is limited by firmware.

4.2 Health and Safety Recommendations

4.2.1 Warnings for the use of Wireless Devices
Please observe all warning notices with regard to the usage of wireless devices.

4.2.2 Potentially Hazardous Atmospheres – Fixed Installations
You are reminded of the need to observe restrictions on the use of radio devices in fuel depots, chemical plants etc. and areas where the air contains chemicals or particles (such as grain, dust, or metal powders).

4.2.3 Safety in Hospitals
Wireless devices transmit radio frequency energy and may affect medical electrical equipment. When installed adjacent to other equipment, it is advised to verify that the adjacent equipment is not adversely affected.

Pacemakers
Pacemaker manufacturers recommended that a minimum of 15cm (6 inches) be maintained between a handheld wireless device and a pacemaker to avoid potential interference with the pacemaker. These recommendations are consistent with independent research and recommendations by Wireless Technology Research.

Persons with Pacemakers:
- Should ALWAYS keep the device more than 15cm (6 inches) from their pacemaker when turned ON.
- Should not carry the device in a breast pocket.
- Should use the ear furthest from the pacemaker to minimize the potential for interference.
- If you have any reason to suspect that interference is taking place, turn OFF your device.
Other Medical Devices
Please consult your physician or the manufacturer of the medical device, to determine if the operation of your wireless product may interfere with the medical device.

4.3 RF Exposure Guidelines

4.3.1 Safety Information
Reducing RF Exposure—Use Properly
Only operate the device in accordance with the instructions supplied.

4.4 International
The device complies with internationally recognized standards covering human exposure to electromagnetic fields from radio devices. For information on “International” human exposure to electromagnetic fields refer to the Declaration of Conformity (DoC) at www.zebra.com/doc.

4.5 EU
Remote and Standalone Antenna Configurations
To comply with EU RF exposure requirements, antennas that are mounted externally at remote locations or operating near users at stand-alone desktop of similar configurations must operate with a minimum separation distance of 20 cm from all persons.

4.6 US and Canada
Co-located statement
To comply with FCC RF exposure compliance requirement, the antennas used for this transmitter must not be co-located or operating in conjunction with any other transmitter/antenna except those already approved in this filling.

Remote and Standalone Antenna Configurations
To comply with FCC RF exposure requirements, antennas that are mounted externally at remote locations or operating near users at stand-alone desktop of similar configurations must operate with a minimum separation distance of 20 cm from all persons.

4.7 Power Supply
This device is powered from a 802.3af compliant power source which is UL approved and certified by the appropriate agencies.
4.8 Radio Frequency Interference Requirements—FCC

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna
- Increase the separation between the equipment and receiver
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected
- Consult the dealer or an experienced radio/TV technician for help

Radio Transmitters (Part 15)

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Restricted Band 5.60 – 5.65 GHz

4.9 Radio Frequency Interference Requirements – Canada

This Class B digital apparatus complies with Canadian ICES-003.

Cet appareil numérique de la classe B est conforme à la norme NMB-003 du Canada.

4.9.1 Radio Transmitters

For RLAN Devices:

The use of 5 GHz RLAN’s, for use in Canada, have the following restrictions:

- Restricted Band 5.60 – 5.65 GHz

This device complies with RSS 210 of Industry & Science Canada. Operation is subject to the following two conditions: (1) this device may not cause harmful interference and (2) this device must accept any interference received, including interference that may cause undesired operation.

Label Marking: The Term "IC:" before the radio certification only signifies that Industry Canada technical specifications were met.
4.10 CE Marking and European Economic Area (EEA)

The use of 2.4 GHz RLAN’s, for use through the EEA, have the following restrictions:

- Maximum radiated transmit power of 100 mW EIRP in the frequency range 2.400 - 2.4835 GHz.
- France, outside usage is restricted to 2.4 – 2.454 GHz.
- Italy requires a user license for outside usage.

4.11 Statement of Compliance

Zebra hereby declares that this device is in compliance with the essential requirements and other relevant provisions of Directive 1999/5/EC. A Declaration of Conformity may be obtained from www.zebra.com/doc.
4.12 **Waste Electrical and Electronic Equipment (WEEE)**

**English:** For EU Customers: All products at the end of their life must be returned to Zebra for recycling. For information on how to return product, please go to: www.zebra.com/weee.

**Français:** Clients de l'Union Européenne: Tous les produits en fin de cycle de vie doivent être retournés à Zebra pour recyclage. Pour de plus amples informations sur le retour de produits, consultez : www.zebra.com/weee.

**Español:** Para clientes en la Unión Europea: todos los productos deberán entregarse a Zebra al final de su ciclo de vida para que sean reciclados. Si desea más información sobre cómo devolver un producto, visite: www.zebra.com/weee.

**Bulgarish:** За клиенти от ЕС: След края на полезния им живот всички продукти трябва да се връщат на Zebra за рециклиране. За информация относно връщането на продукти, моля отидете на адрес: www.zebra.com/weee.

**Italiano:** per i clienti dell'UE: tutti i prodotti che sono giunti al termine del rispettivo ciclo di vita devono essere restituiti a Zebra al fine di consentirne il riciclaggio. Per informazioni sulle modalità di restituzione, visitare il seguente sito Web: www.zebra.com/weee.

**Português:** Para clientes da UE: todos os produtos no fim de vida devem ser devolvidos à Zebra para reciclagem. Para obter informações sobre como devolver o produto, visite: www.zebra.com/weee.

**Nederlands:** Voor klanten in de EU: alle producten dienen aan het einde van hun levensduur naar Zebra te worden teruggezonden voor recycling. Raadpleeg www.zebra.com/weee voor meer informatie over het terugzenden van producten.

**Polski:** Klienci z obszaru Unii Europejskiej: Produkty wycofane z eksploatacji należą do firmy Zebra w celu ich utylizacji. Informacje na temat zwrotu produktów znajdzie się na stronie internetowej www.zebra.com/weee.

**Čeština:** Pro zákazníky z EU: Všechny produkty je nutné po skončení jejich životnosti vrátit společnosti Zebra k recyklaci. Informace o způsobu vrácení produktu najdete na webové stránce: www.zebra.com/weee.

**Eesti:** EL klientidele: kõik tooted tuleb nende eluea lõppedes tagastada taaskasutamise eesmärgil Zebra’ile. Lisainformatsiooni saamiseks toote tagastamise kohta külastage palun aadressi: www.zebra.com/weee.

Ελληνικά: Για πελάτες στην Ε.Ε.: Όλα τα προϊόντα, στο τέλος της διάρκειας της ζωής τους, πρέπει να επιστρέφονται στην Zebra για ανακύκλωση. Για περισσότερες πληροφορίες σχετικά με την επιστροφή ενός προϊόντος, επισκεφθείτε τη διεύθυνση www.zebra.com/weee στο Διαδίκτυο.

4.13 **TURKISH WEEE Statement of Compliance**  
EEE Yönetmeliğine Uygundur

4.14 **Japan (VCCI) - Voluntary Control Council for Interference Class B ITE**

This is a Class B product based on the standard of the Voluntary Control Council for Interference from Information Technology Equipment (VCCI). If this is used near a radio or television receiver in a domestic environment, it may cause radio interference. Install and use the equipment according to the instruction manual.

4.16 **Other Countries**

#### 4.16.1 **Australia**
Use of 5 GHz RLAN's in Australia is restricted in the following band 5.50 – 5.65 GHz.

#### 4.16.2 **Brazil**

Regulatory declarations for AP-650 - BRAZIL

Note: The certification mark applied to the AP-650 is for Restrict Radiation Equipment. This equipment operates on a secondary basis and does not have the right for protection against harmful interference from other users including same equipment types. Also this equipment must not cause interference to systems operating on primary basis.

For more information consult the website [http://www.anatel.gov.br](http://www.anatel.gov.br)

Declarações Regulamentares para AP-650 - Brasil

Nota: “A marca de certificação se aplica ao Transceptor, modelo AP-650. Este equipamento opera em caráter secundário, isto é, não tem direito a proteção contra interferência prejudicial, mesmo de estações do mesmo tipo, e não pode causar interferência a sistemas operando em caráter primário.”
Para maiores informações sobre ANATEL consulte o site: [http://www.anatel.gov.br](http://www.anatel.gov.br)

### 4.16.3 Chile

“Este equipo cumple con la Resolución No 403 de 2008, de la Subsecretaria de telecomunicaciones, relativa a radiaciones electromagnéticas.”

“This device complies with the Resolution Not 403 of 2008, of the Undersecretary of telecommunications, relating to electromagnetic radiation.”

### 4.16.4 Mexico

Restrict Frequency Range to: 2.450 – 2.4835 GHz.

### 4.16.5 Taiwan

NOTICE!

According to: Administrative Regulations on Low Power Radio Waves Radiated Devices

Article 12

Without permission granted by the DGT, any company, enterprise, or user is not allowed to change frequency, enhance transmitting power or alter original characteristic as well as performance to an approved low power radio-frequency devices.

Article 14

The low power radio-frequency devices shall not influence aircraft security and interfere legal communications; If found, the user shall cease operating immediately until no interference is achieved.

The said legal communications means radio communications is operated in compliance with the Telecommunications Act.
The low power radio-frequency devices must be susceptible with the interference from legal communications or ISM radio wave radiated devices.

Wireless device operate in the frequency band of 5.25-5.35 GHz, limited for Indoor use only.

4.16.6 Korea
For a radio equipment using 2400~2483.5MHz or 5725~5825MHz, the following two expression should be displayed:

“This radio equipment can be interfered during operation.”

“This radio equipment cannot provide a service relevant to the human life safety, as it can be crossed” through the user manual etc.
5 Support

If you have a problem with your equipment, contact support for your region.

Contact information is available at: www.zebra.com/support

When contacting Support, please provide the following information:

- Serial number of the unit
- Model number or product name
- Software type and version number

Support responds to calls by e-mail, telephone, or fax within the time limits set forth in support agreements. If you purchased your product from a business partner, contact that business partner for support.

Customer Support Web Sites

Support located at www.zebra.com/support provides information and online assistance including developer tools, software downloads, product manuals and online repair requests.
