1 Introduction

Perfect for extending network coverage to outside areas, the AP 7161 brings the latest 802.11n 3x3 *Multiple Input Multiple Output* (MIMO) tri-radio design together with rugged outdoor performance. True perimeter security is provided using either a dedicated dual band sensor or software mode for both 2.4GHz and 5GHz bands to deliver 24x7 rogue detection and termination. The AP 7161 is optimized with WiNG 5 intelligence, extending QoS, security, and mobility services to the Access Point to support better capacity and performance. The AP 7161 is ideal for industrial, enterprise campus, video surveillance, public safety, and smartgrid utility deployments to extend to the outdoors.

Deployments can be managed using the WiNG 5 architecture. The WiNG 5 architecture is a solution designed for 802.11n networking. It leverages the best aspects of independent and dependent architectures to create a smart network that meets the connectivity, quality, and security needs of each user and their applications based on the availability of network resources, including wired networks. WiNG 5 is a Third Generation WLAN solution which incorporates the best of both the first generation Autonomous Access Point WLAN and the second generation Centralized Controller Based WLAN. The AP 7161 *Vehicle Mounted Modem* (VMM) is a software enabled profile within the WiNG 5 architecture that uses the same hardware as AP 7161 infrastructure models.

The control plane is now distributed between the Access Points and the controllers. The network administrator has the flexibility of directing the data plane either being forwarded directly from the Access Points, or via the controllers. By distributing intelligence and control between the wireless controllers and APs, the WiNG 5 network can route directly via the best path, as determined by factors including the user, the location, the application, and the available wireless and wired resources.

Once adopted by a RFS4000, RFS6000, RFS7000, or NX 9000 series controller, the AP 7161 is managed as an Adaptive AP running the WiNG 5 network management protocol. WiNG 5 networks extend the current differentiation that Adaptive APs offered to the next level by now having the services and security available at every point in the network. The traffic flow is optimized to prevent wired congestion, as well as wireless congestion. Traffic flows dynamically, based on user and application, and finds alternate routes to work around any possible network choke points. Mixed-media application optimization is the hallmark of WiNG 5 networks.

Extending the indoor network to the outdoors increases the need to guard against unwanted intruders and attackers, and monitor network performance and availability. In addition to industry standard security for clients and radio backhaul, the AP 7161 provides true perimeter security using either a dedicated dual band sensor or software mode in the 2.4GHz and 5Ghz bands. Concurrent around-the-clock dual band Network Assurance sensing and wireless traffic is provided together with spectrum analysis, eliminating the need for separate devices.

An Access Point can function as a *Wireless Intrusion Protection System* (WIPS) sensor and upload sensor mode operation information to a dedicated WIPS server. WIPS protects your wireless network, mobile devices, and traffic from attacks and unauthorized access. WIPS provides tools for standards compliance and around-the-clock 802.11a/b/g wireless network security in a distributed environment. WIPS allows administrators to identify and accurately locate attacks, rogue devices, and network vulnerabilities in real time and permits both a wired and wireless lockdown of wireless device connections upon acknowledgment of a threat.
Capacity in video surveillance solutions is critical to the performance of many networks designed to monitor and provide safety. To assist with the deployment of video surveillance networks where the camera application resides, the AP 7161 offers band unlocked radio flexibility. The user can choose between 2.4Ghz, 5Ghz and 4.9Ghz bands for the radio type. The AP 7161 supports 3x3 MIMO technology, reaching a maximum data rate of 300 Mbps to maintain high performance and better quality of transmission.

The AP 7161 is designed to optimize network availability through preemptive intelligence which dynamically senses weak or failing signals, securely moves mobile users to alternate APs, and boosts signal power to automatically fill RF holes and ensure uninterrupted mobile user access.

The AP 7161 band unlocked radios allow flexibility and deployment options for the public safety market. The powerful radio increases coverage, performance, and obstruction penetration for outdoor use. Receiver sensitivity is increased proportionally so users have an increased ability to maintain high performance access for mobility and client devices in the network.

1.1 Document Conventions

The following graphical alerts are used in this document to indicate notable situations:

- **NOTE** Tips, hints, or special requirements that you should take note of.

- **CAUTION** Care is required. Disregarding a caution can result in data loss or equipment malfunction.

- **WARNING!** Indicates a condition or procedure that could result in personal injury or equipment damage.

1.2 AP 7161 Hardware

There are currently four AP 7161 Access Point infrastructure models.

<table>

1.4 Outdoor PoE Hardware and Mounting Accessories

The AP 7161 is a Power over Ethernet (PoE) device. When deployed, the use of an outdoor rated PoE power supply and mounting bracket may be required. The recommended PoE accessories are listed in the following table. For more information, see AP 7161 Power Options Using Power over Ethernet on page 45.

<table>
<thead>
<tr>
<th>Part Number</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>AP-PSBIAS-7161-US</td>
<td>Outdoor IP66 802.3AT gigabit Ethernet power injector, 100-240 VAC US</td>

<td>Outdoor IP66 802.3AT gigabit Ethernet power injector, 100-240 VAC International</td>
</tr>
<tr>
<td>KT-153143-01</td>
<td>Outdoor PoE mounting kit</td>
</tr>
</tbody>
</table>

1.5 AP 7161 Mounting Accessories

The AP 7161 has a flexible three piece mounting kit (KT-147407-01), together with an optional standoff extension arm (KT-150173-01) for pole mounting. When deployed as a VMM, use the vehicle mount kit (KT-158767-01). For more information, see AP 7161 Hardware Mounting and Installation on page 23.

<table>
<thead>
<tr>
<th>Part Number</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>KT-147407-01</td>
<td>AP 7161 mounting hardware kit</td>
</tr>
<tr>
<td>KT-150173-01</td>

</tr>
<tr>
<td>KT-158767-01</td>
<td>AP 7161 vehicle mount</td>
</tr>
</tbody>
</table>

1.6 AP 7161 Weatherized Ethernet Accessory

One RJ45 weatherized connector plug is included with each AP 7161 Access Point. If additional plugs are required, they can be ordered using the part number listed in the following table:

<table>
<thead>
<tr>
<th>Part Number</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>KT-153676-01</td>
<td>AP 7161 RJ45 weatherized Ethernet plug</td>
</tr>
</tbody>
</table>
1.7 Package Contents

Carefully remove all protective packing material from around the AP 7161 Access Point and save the container for later storage and shipping. Refer to AP 7161 Hardware on page 7 when verifying that all AP 7161 hardware has been received. Record the serial numbers on the shipping cartons and AP 7161 Access Points for warranty claims and reference during software download procedures.

![NOTE](image)

Record the serial numbers on the shipping cartons and AP 7161 Access Points for warranty claims and reference during software download procedures.

When opening the shipping cartons, inspect the equipment for damage. If you find any damaged equipment or any equipment is missing, contact Support immediately.

Each AP 7161 model number (see AP 7161 Hardware on page 7) includes the following parts:

- AP 7161 Access Point
- Weatherproof RJ45 plug kit
- AP 7161 Access Point Installation Guide (this document)

The following items are not included with the AP 7161 Access Point models but can be ordered separately:

- Antennas
- Mounting brackets/kits
- PoE power supply and accessories
- RFS controllers (if required)

The following items are not provided and can be sourced from local hardware suppliers, partners, or distributors:

- Lightning protection unit
- Cat5E cable to connect power source
- Band clamps, lag bolts, or U-bolts
- Grounding wire
- Self-healing weatherproofing tape

When opening the shipping cartons, inspect the equipment for damaged or missing parts (see AP 7161 Hardware on page 7). If you find any damaged or missing equipment, contact your distributor, partner, or Support immediately.

For items that are not provided, contact your local hardware suppliers.
1.8 Hardware Installation Guidelines

**CAUTION**  All device wiring must comply with the *National Electric Code* (NEC) or regulations and procedures defined by the regulatory bodies of the country or region where the devices are being deployed. All local building and structure codes must be observed.

**WARNING!**  Strictly observe the following safety precautions and warnings when installing an AP 7161 Access Point.

### 1.8.1 Precautions

Before installing an AP 7161 model Access Point, verify the following grounding and lightning protection notes:

- The installation professional should be familiar with all grounding requirements and regional codes and ensure that the Access Point and mounting asset are properly grounded. The grounding cable for an AP 7161 must be at a minimum a #10 gauge wire cross section. The cable can be attached to the unit using one of the following methods:
  - Loosen the grounding screw, insert the grounding cable into the hole below it, and tighten the screw.
  - Loosen the grounding screw, wind the grounding cable around it, and tighten the screw.
  - Attach a ring lug to the grounding cable and secure it to the unit using the grounding screw.
- To properly attach the grounding cable to the Access Point, refer to *AP 7161 Grounding Screw on page 19*.
- For Ethernet and lightning protection, it is recommended that a commercially available off-the-shelf *Lightning Protection Unit* (LPU) be used on all shielded CAT5E Ethernet connections. The LPU should be rated for outdoor use.
- For the best possible protection, each Access Point requires an LPU be installed adjacent to the Access Point. If there is a LAN connection to an indoor network, a second LPU is required at the cable entry point to the building.

**CAUTION**  Lightning damage is not covered under the conditions of a standard product warranty. When installed correctly, *Lightning Protection Units* (LPUs) provide the best protection from the harmful effects of lightning. Observe all regional and national codes that apply for lightning protection.

- Verify that the deployment environment has a continuous temperature range compatible with the operating temperature range of the device.
1.8.2 Warnings

- Read all installation instructions and site survey reports, and verify correct equipment installation before connecting the Access Point to its power source.
- Remove jewelry and watches before installing this equipment.
- Verify that the unit is grounded before connecting it to the power source.
- Verify that any device connected to this unit is properly wired and grounded.
- Connect all power cords to a properly wired and grounded electrical circuit. Verify that the electrical circuits have appropriate overload protection.
- Attach only approved power cords to the device.
- Verify that the power connector and socket are accessible at all times during the operation of the equipment.
- Do not hold any component containing a radio such that it is very close to or touching any exposed parts of the body, especially the face or eyes, while transmitting.
- Do not work with power circuits in dimly lit spaces.
- Do not install this equipment or work with its power circuits during thunderstorms or other weather conditions that could cause a power surge.
- Verify there is adequate ventilation around the device, and that ambient temperatures meet equipment operation specifications.
- Avoid contact with overhead power lines.
- Take precautions to avoid injury from falling tools and equipment. Crews should wear hard hats in and around the installation work site.
- Be aware of vehicular traffic in and around the installation work site.
- Do not operate a portable transmitter near unshielded blasting caps or in an environment where explosives are present unless the transmitter is especially certified for such use.
- Refer to your site survey and network analysis reports to determine specific requirements for each deployment.
- Assign installation responsibility to the appropriate personnel.
- Identify and document where all installed components are located.
- Identify and prepare Ethernet and console port connections.
- Verify that cable lengths are within the maximum allowable distances for optimal signal transmission.

⚠️ **CAUTION** The maximum length allowed for PoE cables is 100 meters.
1.9 Access Point Placement

Observe the following recommended guidelines to help ensure a successful network deployment:

- Identify all pieces of the mounting bracket and mounting extension arm hardware and ancillary hardware (see AP 7161 Hardware on page 7).
- Mount the device with the black gore vent down.

- Mounting height for network devices should not exceed 30 to 35 feet. Mounting height should vary to accommodate the topography of the deployment area, foliage, and other obstructions.
- Devices can be deployed using any of the recommended outdoor deployment procedures.
- Line of Sight (LoS) guidelines should be given special consideration when deploying devices.

1.10 AP 7161 Hardware Overview

AP 7161 models can be purchased in a two or three radio configuration (see AP 7161 Hardware on page 7). Each model has two band unlocked radios that can operate across the 2.4GHz, 4.9GHz, and 5GHz bands, subject to country regulatory approval and outdoor/band use.

An AP 7161 must be installed by trained professionals familiar with RF planning and regulatory limits defined by the regulatory bodies of the country where the devices are being deployed. All common precautions for grounding and Electrostatic Discharge (ESD) protection should be observed during deployment and installation. AP 7161 Access Points must be installed such that no harmful interference results from device operation.

1.10.1 AP 7161 Ports and Connections

The AP 7161 Access Point has the following port designations:

- Antenna ports R1-A, B and C, R2-A, B and C, and R3-A and B
- Console port
- GE1/POE - LAN port
- GE2 - WAN port

The following sections describe the ports and connections for the AP 7161.
1.10.2 **AP 7161 Antenna Connectors**

AP 7161 two radio models (AP-7161-66040-US and AP-7161-66040-WR) are configured with six N type connectors to support two active WLAN data radios.

When mounting antennas to ports R1-A, R1-B, and R1-C, ensure that you have selected the appropriate band for the configured radio that uses ports R1-A, R1-B, and R1-C. In this instance, R1 ports relate to the software configured radio 1 settings.

When mounting antennas to connectors marked R2-A, R2-B and R2-C, these antenna ports relate to the software settings of radio 2. Care must be taken to provide the correct antenna for the operating band of each port.

AP 7161 three radio models (AP-7161-66S40-US and AP-7161-66S40-WR) are configured with eight N type connectors to support two active WLAN data radios and a dedicated sensor radio as the third.

As with the two radio models, R1 ports relate to the software configured radio 1 settings. When mounting antennas to connectors marked R2-A, R2-B and R2-C, the antenna ports relate to the software configured radio 2 settings. Care must be taken to provide the correct antenna for the operating band of each port.
Ports R3-A and R3-B are reserved for the sensor radio. An appropriate multi band antenna should be mounted on the unit for sensor operation.

---

**NOTE**  The sensor radio does not function as a WLAN data radio.

---

**WARNING!**  Antenna ports where no antenna is mounted must be properly terminated using an approved IP67 terminator.

---

**WARNING!**  All antenna connectors should be covered with weatherproofing tape.

---

### 1.10.3 AP 7161 Console, GE1/POE and GE2 Ports

The AP 7161 has Ethernet ports for external console, GE1/POE, and GE2 connections. To gain access to the ports you will need to remove the protective caps.
The Ethernet cable from the PoE device (if used) connects to the GE1/POE port on the unit.

The GE2 port on the unit can be used if a second data connection for an external device (e.g. surveillance camera) is required. Ensure the GE2 WAN port has been configured to permit an attached external device during the configuration process.

When making connections using these ports, a properly rated RJ45 connector is required. One weatherproof RJ45 plug kit is provided with each Access Point. When connecting cables to the AP 7161 Ethernet ports, follow the instructions in the connector packaging and tighten the connectors to create a weatherproof seal. Shielded cables are required.
1.10.4 AP 7161 Grounding Screw

The grounding screw is located to the right of the GE1/POE port and above the GND symbol.

![AP 7161 Grounding Screw Image]

**WARNING!** The grounding cable for an AP 7161 must be at a minimum a #10 gauge wire cross section.

The grounding cable can be attached to the unit using one of three recommended methods. Using an 8mm socket and driver:

- Loosen the grounding screw and insert the grounding cable into the hole below it. Tighten the grounding screw to 30 inch pounds (lbf-in).
- Loosen the grounding screw and wind the grounding cable around the screw. Tighten the grounding screw to 30 inch pounds (lbf-in).
- Attach a ring lug to the grounding cable and remove the grounding screw to attach the ring lug to the Access Point. Secure it to the unit by reinserting the grounding screw. Tighten the grounding screw to 30 inch pounds (lbf-in).
1.11 LED Indicators

The AP 7161 Access Point has six LEDs on the top of the Access Point housing. When the Access Point is positioned with the logo in the lower right corner, LED 1 is on the left and LED 6 is on the right.

The Access Point utilizes two different colored lights below each LED. Only one light displays within an LED at any given time. Every light within each LED is exercised during startup to allow the user to see if an LED is not functioning. The LEDs turn on and off while rotating in a circular pattern. Since two LEDs feed each light pipe, the pattern is from left to right (LEDs 1 through 6), then right to left (LEDs 6 through 1).
The top housing LEDs have the following display patterns and functionality:

### 1.11.1 Two Radio LEDs

A two radio model Access Point (P/N AP-7161-66040-US and AP-7161-66040-WR) has the following unique LED behavior:

<table>
<thead>
<tr>
<th>LED 1 (Sensor)</th>
<th>LED 2 (2.4 GHz)</th>
<th>LED 3 (5 GHz)</th>
<th>LED 4 (GE2/WAN)</th>
<th>LED 5 (GE1/LAN)</th>
<th>LED 6 (System)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Not Used</td>
<td>Blinking <strong>Emerald</strong> indicates 802.11b/g/n activity.</td>
<td>Blinking <strong>Amber</strong> indicates 802.11a/n activity.</td>
<td>LED <strong>Off</strong> indicates the port is not connected.</td>
<td>LED <strong>Off</strong> indicates the port is not connected.</td>
<td><strong>Solid Red</strong> indicates diagnostic mode.</td>
</tr>

**WARNING!** If LED 6 remains blinking **Red** for longer than 10 minutes, cycle the power to the unit. If the condition persists, contact the Support center.
1.11.2 Three Radio LEDs

A three radio model Access Point with sensor (P/N AP-7161-66S40-US and AP-7161-66S40-WR) has the following unique LED behavior:

<table>
<thead>
<tr>
<th>LED 1 (Sensor)</th>
<th>LED 2 (2.4 GHz)</th>
<th>LED 3 (5 GHz)</th>
<th>LED 4 (GE2/WAN)</th>
<th>LED 5 (GE1/LAN)</th>
<th>LED 6 (System)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Blinking <strong>Emerald</strong> and <strong>Amber</strong> at 2 second interval indicates a radio is present but not connected to a server.</td>
<td>Blinking <strong>Emerald</strong> indicates 802.11b/g/n activity. <strong>Solid Amber</strong> indicates a radio is present but not configured.</td>
<td>Blinking <strong>Amber</strong> indicates 802.11a/n activity. <strong>LED Off</strong> indicates the port is not connected. <strong>Blinking Green</strong> indicates normal operation. <strong>Rapidly blinking Yellow</strong> indicates a port error.</td>
<td><strong>LED Off</strong> indicates the port is not connected. <strong>Blinking Green</strong> indicates normal operation. <strong>Rapidly blinking Yellow</strong> indicates a port error.</td>
<td><strong>Solid Red</strong> indicates diagnostic mode. <strong>Blinking Red</strong> at 1 second interval indicates POST failure. <strong>Solid White following diagnostic mode</strong> indicates booting. <strong>Blinking Red and White</strong> at 1 second interval indicates “no adoption”.</td>
<td><strong>Solid White</strong> indicates normal operation.</td>
</tr>
</tbody>
</table>
2  AP 7161 Hardware Mounting and Installation

It is recommended to use the AP 7161 mounting bracket kit (KT-147407-01) for most deployments. When a standoff distance is required for a pole mounted or wall mounted installation, use the extension arm kit (KT-150173-01).

The following sections detail the installation procedure for deploying an AP 7161 Access Point.

2.1 Mounting Bracket Kit

The AP 7161 mounting bracket kit (KT-147407-01) includes the Access Point bracket (left), angle adapter bracket (center), and pole mount bracket (right) sections:

The Access Point bracket and angle adapter bracket can be rotated (plus or minus 15 degrees) and tilted (up to 45 degrees) to orient the unit for optimal positioning.

The following ancillary hardware to assemble the mounting bracket sections is included in the kit:

<table>
<thead>
<tr>
<th>Description</th>
<th>Quantity</th>
</tr>
</thead>
<tbody>
<tr>
<td>M6 serrated hex flanged screws</td>
<td>8</td>
</tr>
<tr>
<td>1/2 inch hex head nut</td>
<td>2</td>
</tr>
<tr>
<td>1/2 inch x 3/4 inch hex head bolt</td>
<td>2</td>
</tr>
</tbody>
</table>
A torque wrench or ratchet with a 10mm adapter, or an adjustable wrench, can be used to assemble the mounting brackets. A finished assembly of the mounting bracket kit is shown below. Assembly during deployment may differ to achieve the required angle and rotation.

### 2.1.1 Extension Arm Kit

When mounting an AP 7161 on poles more than 3 inches in diameter, use the extension arm kit (KT-150173-01) to provide a minimum standoff distance of twelve inches to avoid interference with the antennas.
The extension arm kit can also be used in combination with any of the brackets from the mounting bracket kit.

The following ancillary hardware to attach the extension arm to the mounting bracket kit sections is included in the extension arm kit:

<table>
<thead>
<tr>
<th>Description</th>
<th>Quantity</th>
</tr>
</thead>
<tbody>
<tr>
<td>1/2 inch hex head nut</td>
<td>2</td>
</tr>
<tr>
<td>1/2 inch x 3/4 inch hex head bolt</td>
<td>2</td>
</tr>
</tbody>
</table>
2.2 Pole Mounted Installations

The mounting hardware kit and extension arm can be used in various combinations to properly install the AP 7161 on a pole. For poles of up to 3 inches in diameter, attach the pole mount bracket of the mounting hardware kit at the desired position on the pole using band clamps up to 3/4 inch width, or a 1/2 inch x 4 inch wide U-bolt and nuts. For poles greater than 3 inches in diameter, attach the pole mount bracket using band clamps.

---

**CAUTION** Always mount the AP 7161 with the black gore vent facing down.

---

**NOTE** The U-bolt and band clamps are not included in the mounting bracket kit.

---

**NOTE** Use of the extension arm is recommended for installations on poles greater than 3 inches in diameter.

2.2.1 Vertical Pole Mount

Use the following procedure for vertical pole mount installations. The extension arm is recommended when mounting the Access Point to poles greater than 3 inches in diameter.

For poles up to 3 inches in diameter when using a U-bolt:

1. Thread two 1/2 inch nuts onto the U-bolt.
2. Position the U-bolt on the pole and place the pole mount bracket section on the U-bolt. Adjust the two 1/2 inch inner nuts until the pole mount bracket section is against the pole and the U-bolt can be secured tightly to the pole at the desired mounting location.

3. Place the angle adapter bracket section on the U-bolt with the open slot connections on the bottom and align it with the pole mount section. Attach with two 1/2 inch nuts. Tighten all nuts to 300 inch pounds (lbf-in).
4. Position the Access Point bracket section so that the bottom of the section with the straight (not bevel cut) side is oriented toward the bottom side of the AP with the gore vent. Using a torque wrench or a ratchet and a 10mm socket, or an adjustable wrench, attach (but don’t tighten) the Access Point bracket section to the AP 7161 with the four M6 flange screws.

5. Insert two M6 hex flange screws into the bottom holes on the sides of the Access Point bracket section.
6. With the Access Point positioned so that the gore vent is facing down, insert the two M6 hex flange screws in the bottom holes on the sides of the Access Point bracket section into the open slot connections on the bottom of the angle adapter bracket section.

7. Rotate the Access Point bracket section upward and align the top holes on the sides with the top holes on the angle adapter bracket section. Insert two M6 hex flange screws into the top holes on the angle adapter bracket section.

8. Use a torque wrench or a ratchet and a 10mm socket, or an adjustable wrench, to finish attaching the Access Point bracket section to the angle adapter bracket section with the M6 hex flange screws in the open slot connections and the top holes on the angle adapter bracket section. Do not tighten the screws until all rotation and tilt adjustments are complete.

9. To adjust the position of the Access Point, rotate the Access Point bracket section (plus or minus 15 degrees) and tilt the angle adapter bracket section (up to 45 degrees).

10. Tighten all hex flange screws to 60 inch pounds (lbf-in).
For mounting with band clamps:

1. Attach the pole mount bracket section at the desired mounting location using band clamps.

2. With the angle adapter bracket section positioned so that the open connector slots are on the bottom, attach the angle adapter bracket section to the pole mount bracket section using two 1/2 inch bolts and nuts. Tighten the nuts to 30 inch pounds (lbf-in).
3. Position the Access Point bracket section so that the bottom of the section with the straight (not bevel cut) sides is oriented toward the bottom side of the AP with the gore vent. Using a torque wrench or a ratchet and a 10mm socket, or an adjustable wrench, attach (but don’t tighten) the Access Point bracket section to the AP 7161 with the four M6 hex flange screws.

4. Insert two M6 hex flange screws into the bottom holes on the sides of the Access Point bracket section.
5. With the Access Point positioned so that the gore vent is facing down, insert the two M6 hex flange screws in the bottom holes on the sides of the Access Point bracket section into the open slot connections on the bottom of the angle adapter bracket section.

6. Rotate the Access Point bracket section upward and align the top holes on the sides with the top holes on the angle adapter bracket section. Insert two M6 hex flange screws into the top holes on the angle adapter bracket section.
7. Use a torque wrench or a ratchet and a 10mm socket, or an adjustable wrench, to finish attaching the Access Point bracket section to the angle adapter bracket section with the M6 hex flange screws in the open slot connections and the top holes on the angle adapter bracket section. Do not tighten the screws until all rotation and tilt adjustments are complete.

8. To adjust the position of the Access Point, rotate the Access Point bracket section (plus or minus 15 degrees) and tilt the angle adapter bracket section (up to 45 degrees).

9. Tighten all hex flange screws to 60 inch pounds (lbf-in).

To use the extension arm with the mounting hardware kit:

1. Attach the pole mount section at the desired mounting location using a U-bolt or band clamps.

2. Complete the steps for assembling and positioning the mounting bracket sections for poles less than or greater than 3 inches. See Vertical Pole Mount on page 26.
3. Using a torque wrench or a ratchet and a 10mm socket, or an adjustable wrench, attach the extension arm to the Access Point bracket section with four M6 hex flange screws. The two oval holes must be positioned on the short sides of the Access Point. Tighten the hex flange screws to 60 inch pounds (lbf-in) the unit.

4. With the Access Point positioned so that the gore vent is facing down, attach the extension arm to the Access Point bracket section with two 1/2 inch bolts and nuts. Tighten the nuts to 30 inch pounds (lbf-in).
An example of using the extension arm with only the pole mount bracket is shown below:

2.2.2 **Wall Mounted Installations**

For wall mounted installations, use only the Access Point bracket section and angle adjust bracket section if required.

<table>
<thead>
<tr>
<th>CAUTION</th>
<th>Always mount the AP 7161 with the black gore vent facing down.</th>
</tr>
</thead>
<tbody>
<tr>
<td>NOTE</td>
<td>The U-bolt and band clamps are not included in the mounting bracket kit.</td>
</tr>
<tr>
<td>NOTE</td>
<td>The lag bolts are not included in the mounting bracket kit.</td>
</tr>
</tbody>
</table>
1. With the open slot connections facing down, attach the angle adjust bracket section at the desired mounting location using four #10/32 lag bolts.

2. Using a torque wrench or a ratchet and a 10mm socket, or an adjustable wrench, attach (but don’t tighten) the Access Point bracket section to the AP 7161 with four M6 hex flange screws and insert two M6 hex flange screws into the bottom holes on the sides of the Access Point bracket section.

3. With the Access Point positioned so that the gore vent is facing down, insert the two M6 hex flange screws in the bottom holes on the sides of the Access Point bracket section into the open slot connections on the bottom of the angle adapter bracket section. Rotate the Access Point bracket section upward and
align the top holes on the sides with the top holes on the angle adapter bracket section. Insert two M6 hex flange screws into the top holes on the angle adapter bracket section.

4. Use a torque wrench or a ratchet and a 10mm socket, or an adjustable wrench, to finish attaching the angle adapter bracket section to the Access Point bracket section with the four M6 hex flange screws in the open slot connections and the top holes on the angle adapter bracket section. Do not tighten the screws until all rotation and tilt adjustments are complete.

5. To adjust the position of the Access Point, rotate the Access Point bracket section (plus or minus 15 degrees) and tilt the angle adapter bracket section (up to 45 degrees).

6. Use a torque wrench or a ratchet and a 10mm socket, or an adjustable wrench, to tighten all screws when all adjustments are complete.

7. Tighten all hex flange screws to 60 inch pounds (lbf-in).
To use only the extension arm:

1. Using a torque wrench or a ratchet and a 10mm socket, or an adjustable wrench, attach the extension arm to the Access Point with four M6 hex flange screws. The two oval holes must be positioned on the short sides of the Access Point. Tighten the hex flange screws to 60 inch pounds (lbf-in).

2. Attach the extension arm directly to the wall with lag bolts for other appropriate fasteners.
To use the extension arm with the mounting hardware kit:

1. With the open slot connections facing down, attach the angle adjust bracket section at the desired mounting location using four #10/32 lag bolts.

2. Complete the steps for assembling and positioning the angle adapter bracket and Access Point bracket sections outlined above. See *Vertical Pole Mount on page 26.*
3. With the Access Point positioned so that the gore vent is facing down, attach the extension arm to the Access Point using four M6 hex flange screws. The two oval holes must be positioned on the short sides of the Access Point. Tighten the hex flange screws to 60 inch pounds (lbf-in).

4. With the Access Point positioned so that the gore vent is facing down, attach the extension arm to the Access Point bracket section with two ½ inch bolts and nuts. Tighten bolts to 300 inch pounds (lbf-in).
2.3 AP 7161 VMM Mounting and Installation

The AP 7161 Vehicle Mounted Modem (VMM) is a software enabled profile within the WiNG 5 architecture that uses the same hardware as the AP 7161 Access Point infrastructure models (see AP 7161 Hardware).

An AP 7161 Access Point operating as a VMM can be permanently mounted in a vehicle. It provides mesh backhaul access to a mesh infrastructure network to connect mobile data terminals, laptop computers, or any other device that has either an Ethernet or 802.11 wireless capability. The VMM operates on Power over Ethernet (PoE) and is rugged enough for installation in commercial and public safety vehicles for mobile deployments. It is recommended to use the AP 7161 vehicle mount kit (KT-158767-01) for mobile deployments.
To install the AP 7161 Access Point VMM:

1. Position the AP 7161 VMM upside down with the eight screw holes facing upwards.

2. Put the flat plate on top of the VMM. Align the key hole and four screw holes on the flat plate with the philips screw head and four screw holes on the VMM.
3. Put the chassis mount on the flat plate with the key hole and four screw holes aligned.

![Chassis Mount Image]

**NOTE** The screw heads on the chassis mount should be facing down.

4. Put the stiffener plate on the chassis mount with the key hole and four screw holes aligned.

![Stiffener Plate Image]
1. Insert four screws with washers through the holes of the three plates and into the screw holes on the bottom of the VMM.

2. Using a 5mm allen wrench or box wrench, tighten the screws to 150 inch pounds (lbf-in).

3. Set the VMM and top bracket sub-assembly aside.

4. Locate the mount point position for the VMM in the vehicle. Ensure there is sufficient clearance for cables and antennas. The surface should be metal (1.0 mm minimum thickness), hard plastic or plywood, and capable of supporting the weight of the VMM and bracket assembly.

5. Attach the vehicle mount securely to the mount point with metal screws or bolts (not provided).

6. Securely attach the AP 7161 top bracket sub-assembly to the vehicle mount with the four pre-installed thumb screws. Tighten the screws to 90 inch pounds (lbf-in) using a philips screwdriver or pliers.

7. Attach three RP-SMAF adapters (part number 25-90263-02R) to the N connectors on the active mobile radio on the VMM. Radio 1 ports are labeled R1-A, R1-B, and R1-C. Radio 2 ports are labeled R2-A, R2-B, and R2-C.

8. Attach the antennas to the adapters for each radio to be enabled.

9. Connect the CAT5E cable providing power to the RJ45 port labeled GE1/POE.

---

**WARNING!** Connecting power to any other port could damage the unit.

10. Select an Access Point Mode from the available options.
2.4 AP 7161 Power Options Using Power over Ethernet

Power over Ethernet (PoE) is the power source for an AP 7161 Access Point. For optimal performance, an AP 7161 can be powered by the following injectors and RFS controllers that support 802.AT PoE.

For installations requiring an outdoor PoE injector, the following options are recommended:

- AP-PSBIAS-7161-US
- AP-PSBIAS-7161-WW

The AP-PSBIAS-7161 is a 1-Port 802.3at PoE Gigabit Ethernet injector. The injector is IP66 rated for outdoor deployments when used with the weatherproof kit supplied.

There are two power cord options for the AP-PSBIAS-7161 models. The AP-PSBIAS-7161-US comes equipped with a cable with a standard three prong power plug. This plug can be removed by the installer if required when connecting to an AC source. The AP-PSBIAS-7161-WW comes equipped with a cable with open leads. Mounting kits are not supplied (see Outdoor PoE Hardware and Mounting Accessories on page 11 for mounting kit part numbers).

NOTE Product installation and mounting instructions are provided with the outdoor power injector. Refer to the AP-PSBIAS-7161 Install Guide.

If located within 100 meters of the controller and a PoE port is available, the AP 7161 Access Point can also be connected directly to one of the following controllers:

- RFS4000
- RFS6000
- RFS7000
- NX9000
- NX95xx

A standard CAT5E cable can be used to provide the connection to the AP 7161. The GE1/POE port on the AP 7161 is where the standard CAT5E cable will connect to the Access Point and use of the weatherproof RJ45 plug kit that comes with the unit will maintain a weatherproof seal for outdoor installation at the ethernet port.

If a CAT5E cable is used to connect the Access Point to an RFS controller through a building egress, a suitable lightning protection system should be considered. A professional installer should be consulted to identify an appropriate system.

CAUTION When using controllers, the total power limits for the AP 7161 must be considered. The two radio configuration draws less power than a three radio configuration. If sufficient power is not available, the AP 7161 software will disable the third radio and throttle back performance on all radio and Ethernet interfaces.
2.5 AP 7161 VMM Power Options

The AP 7161 Vehicle Mounted Modem (VMM) is a software enabled profile within the WiNG5 architecture that uses the same hardware as AP 7161 infrastructure models (see AP 7161 Hardware on page 7). As such, a mounted AP 7161 operating as a VMM within a vehicle or mobile asset requires a power source delivered via Power over Ethernet (PoE). The same requirements and guidelines for Access Point power are in force as noted in this installation manual. Refer to Specifications on page 59 for operating voltage and operating current.

An AP 7161 operating as a VMM has the capability of being installed into a variety of vehicular and mobile environments. As such, a professional certified installation partner should be consulted on appropriate power sources and installation into a vehicle or mobile asset. A vehicular power source is not provided. No responsibility is taken for any power source design operated outside of the allowed specifications for power of an AP 7161 running as an AP 7161 VMM.

---

**CAUTION** Exceeding these requirements can invalidate warranty.

---

The following table shows a number of potential power sources and corresponding industry options to power an AP 7161 VMM:

<table>
<thead>
<tr>
<th>Potential Vehicular/Mobile Power Sources</th>
<th>Required Source</th>
</tr>

</tr>
<tr>
<td>AC inverter in vehicle</td>
<td>AC PoE injector</td>
</tr>
<tr>
<td>PoE switch in train or vehicle</td>
<td>Direct connection via CAT5E cable</td>
</tr>
</tbody>
</table>
3 Basic Access Point Configuration

Once the Access Point is installed and powered on, complete the following steps to get the device up and running and access management functions:

1. Attach an Ethernet cable from the Access Point to a controller with an 802.3af compatible power source or use the PWRS-14000-148R power supply to supply power to the AP 7181 (once fully cabled).

   If your host system is a DHCP server, an IP address is automatically assigned to the AP 7181 and can be used for device connection. However, if a DHCP server is not available, you'll need to derive the IP address from the AP MAC address. Using this method, the last two bytes of the MAC address become the last two octets of the IP address. For example:

   MAC address - 00:C0:23:00:F0:0A
   Zero-Config IP address - 169.254.240.10

   To derive the Access Point's IP address using its MAC address:

   a. Open the Windows calculator by selecting Start > All Programs > Accessories > Calculator. This menu path may vary slightly depending on your version of Windows.
   b. With the Calculator displayed, select View > Scientific. Select the Hex radio button.
   c. Enter a hex byte of the Access Point’s MAC address. For example, F0.

2. Select the Dec radio button. The calculator converts F0 into 240. Repeat this process for the last Access Point MAC address octet. Point the Web browser to the Access Point’s IP address. The following login screen displays:
3. Enter the default username *admin* in the **Username** field.
4. Enter the default password *admin123* in the **Password** field.
5. Click the **Login** button to load the management interface.

**NOTE** When logging in for the first time, you’re prompted to change the password to enhance device security in subsequent logins.

**NOTE** If you get disconnected when running the wizard, you can connect again with the Access Point’s actual IP address (once obtained) and resume the wizard.

6. If this is the first time the management interface has been accessed, the Initial Setup Wizard automatically displays.

**Function Highlight**

- Access Point Types: Virtual Controller AP, Standalone AP, or Dependent AP
- Networking Mode: Bridge or Router Operation
- LAN Configuration
- Radio Configuration
- WAN Configuration
- Wireless LAN Setup
- Location, Country Code, Time Zone, Date and Time
- Summary and Save/Commit

**Choose One Type to Setup the Access Point**

- Typical Setup (Recommended)
  - The wizard uses as many default parameters as possible to simplify the configuration process.
- Advanced Setup
  - With this selection, you may configure the access point’s LAN, WAN, Radio Mapping, Radius Server, VLAN, etc.
The Introduction screen displays the various actions that can be performed using the wizard under the **Function Highlight** field.

Use the **Choose One type to Setup the Access Point** field options to select the type of wizard to run. The **Typical Setup** is the recommended wizard. This wizard uses the default parameters for most of the configuration parameters and sets up a working network with the least amount of manual configuration.

The **Advanced Setup** wizard is for administrators who prefer more control over the different configuration parameters. A few more configuration screens are available for customization when the Advanced Setup wizard is used.

The first page of the **Initial Setup Wizard** displays the **Navigation Panel** and **Function Highlights** for the configuration activities comprising the Access Point’s initial setup. This page also displays options to select the typical or advanced mode for the wizard.

The Navigation Panel for the Typical Setup Wizard displays the basic configuration options.

<table>
<thead>
<tr>
<th>Navigation Panel</th>
</tr>
</thead>
<tbody>
<tr>
<td>✓ Introduction</td>
</tr>
<tr>
<td>Access Point Settings</td>
</tr>
<tr>
<td>Network Topology</td>
</tr>
<tr>
<td>LAN Configuration</td>
</tr>
<tr>
<td>Wireless LAN Setup</td>
</tr>
<tr>
<td>Summary and Commit</td>
</tr>
</tbody>
</table>

A green checkmark to the left of an item in the **Navigation Panel** defines the task as having its minimum required configuration set correctly. A red X defines a task as still requiring at least one parameter be defined correctly.
7. Select **Save/Commit** within each page to save the updates made to that page's configuration. Select **Next** to proceed to the next page listed in the Navigation Panel without saving your updates.

---

**NOTE** While you can navigate to any page in the navigation panel, you cannot complete the Initial AP Setup Wizard until each task in the Navigation Panel has a green checkmark.

For the purposes of this guide, use the **Typical Setup (Recommended)** option to simplify the process of getting the Access Point up and running quickly with a minimum number of changes to the Access Point's default configuration.

For information on using the Access Point's Advanced Setup option, refer to the *WiNG Access Point System Reference Guide* to familiarize yourself with the feature set supported by the WiNG operating system. The guide is available at [www.zebra.com/support](http://www.zebra.com/support).

To configure the Access Point using the Typical Setup Wizard:

8. Select **Typical Setup** from the **Choose One type to Setup the Access Point** field on the Initial Setup Wizard.

9. The Typical Setup Wizard displays the **Access Point Settings** screen to define the Access Point's Standalone versus Virtual Controller AP functionality. This screen also enables selection of the country of operation for the Access Point.

### Access Point Type Selection

- **Virtual Controller AP** - When more than one access point is deployed, a single access point can function as a Virtual Controller AP and manage Dependent mode access points. The Virtual Controller AP can adopt and configure other like APs in a 24-cell deployment.

- **Standalone AP** - Select this option to deploy this access point as an autonomous "fat" access point. A standalone AP isn't managed by a Virtual Controller AP, or adopted by a controller.

**Country** [Choose a Country Code]
10. Select an **Access Point Type** from the following options:
   - **Virtual Controller AP** - When more than one Access Point is deployed, a single Access Point can function as a Virtual Controller AP. Up to 24 Access Points can be connected to, and managed by, a single Virtual Controller AP of the same Access Point model. These connected Access Points must be the same model as the Virtual Controller AP.
   - **Standalone AP** - Select this option to deploy this Access Point as an autonomous fat Access Point. A Standalone AP isn’t managed by a Virtual Controller AP, or adopted by a controller.

**NOTE** If wanting to adopt the Access Point to a controller or service platform, use the controller or service platform's resident UI to connect to the Access Point, provision its configuration and administrate the Access Point’s configuration.

**NOTE** If designating the Access Point as a Standalone AP, its recommended the Access Point’s UI be used exclusively to define its device configuration, and not the CLI. The CLI provides the ability to define more than one profile and the UI does not. Consequently, the two interfaces cannot be used collectively to manage profiles without an administrator encountering problems.

11. Select the **Country Code** of the country where the Access Point is deployed. Selecting a proper country is a critical task while configuring the Access Point, as it defines the correct channels of operation and ensures compliance to the regulations of the selected country. This field is only available for the Typical Setup Wizard.

12. Select **Next** to set the Access Point’s network mode.
13. The Typical Setup Wizard displays the **Network Topology** screen to define how the Access Point handles network traffic.

**Network Topology**

- **Router Mode** - The access point routes traffic between the wireless network and the Internet or corporate network (WAN).

- **Bridge Mode** - In Bridge Mode, the access point depends on an external router for routing LAN and WAN traffic. Routing is generally used on one device, whereas bridging is typically used in a larger density network. Thus, select Bridge Mode when deploying this access point with numerous peer APs supporting clients on both the 2.4 and 5GHz radio bands.

14. Select an Access Point Mode from the available options.

- **Router Mode** - In Router Mode, the Access Point routes traffic between the local network (LAN) and the Internet or external network (WAN). Router mode is recommended in a deployment supported by just a single Access Point.

- **Bridge Mode** - In Bridge Mode, the Access Point depends on an external router for routing LAN and WAN traffic. Routing is generally used on one device, whereas bridging is typically used in a larger density network. Select Bridge Mode when deploying this Access Point with numerous peer Access Points supporting clients on both the 2.4GHz and 5GHz radio bands.

**NOTE** When Bridge Mode is selected, WAN configuration cannot be performed and the Typical Setup Wizard does not display the WAN configuration screen.
15. Select **Next**. The Typical Setup Wizard displays the **LAN Configuration** screen to set the Access Point’s LAN interface configuration.

**LAN Configuration**

Please configure interface settings for LAN (YLAN 1) which will be used by wireless clients.

- **Use DHCP**
- **Static IP Address/Subnet**

**DHCP Server**

- **Use on-board DHCP server to assign IP addresses to wireless clients**

- **Range**

- **Default Gateway**

**Domain Name Server (DNS)**

- **DNS Forwarding**

16. Set the following DHCP and Static IP Address/Subnet information for the LAN interface:

- **Use DHCP** - Select the checkbox to enable an automatic network address configuration using the Access Point’s DHCP server.

- **Static IP Address/Subnet** - Enter an IP Address and a subnet for the Access Point’s LAN interface. If **Use DHCP** is selected, this field is not available. When selecting this option, define the following **DHCP Server** and **Domain Name Server (DNS)** resources, as those fields will become enabled on the bottom portion of the screen.

- **Use on-board DHCP server to assign IP addresses to wireless clients** - Select the checkbox to enable the Access Point’s DHCP server to provide IP and DNS information to clients on the LAN interface.

- **Range** - Enter a starting and ending IP Address range for client assignments on the LAN interface. Avoid assigning IP addresses from x.x.x.1 - x.x.x.10 and x.x.x.255, as they are often reserved for standard network services. This is a required parameter.

- **Default Gateway** - Define a default gateway address for use with the default gateway. This is a required parameter.
- **DNS Forwarding** - Select this option to allow a DNS server to translate domain names into IP addresses. If this option is not selected, a primary and secondary DNS resource must be specified. DNS forwarding is useful when a request for a domain name is made but the DNS server, responsible for converting the name into its corresponding IP address, cannot locate the matching IP address.

- **Primary DNS** - Enter an IP Address for the main Domain Name Server providing DNS services for the Access Point’s LAN interface.

- **Secondary DNS** - Enter an IP Address for the backup Domain Name Server providing DNS services for the Access Point’s LAN interface.

17. Select **Next**. The Typical Setup Wizard displays the **Wireless LAN Setup** screen to set the Access Point’s Wireless LAN interface configuration.

![WLAN 1 Configuration](image)

**WLAN 1 Configuration**

- **SSID** - Configure the SSID for the WLAN.
- **WLAN Type** - Configure the encryption and authentication to use with this WLAN.
  - **No Authentication and No Encryption** - Configures a network without any authentication. This option also configures the network without encryption. This means that any data transmitted through the network is in plain text. Any device between end points can see the information transmitted. This is the least secure of all network configurations.
  - **Captive Portal Authentication and No Encryption** - Configures a network that uses a RADIUS server to authenticate users before allowing them on to the network. Once on the network, no encryption is used for the data being transmitted through the network. Select this option to use a Web page (either internally or externally hosted) to authenticate users before access is granted to the network.
  - **PSK authentication, WPA2 encryption** - Configures a network that uses PSK authentication and WPA2 encryption. Select this option to implement a pre-shared key that must be correctly shared between the Access Point and requesting clients using this WLAN.

18. Set the following WLAN1 Configuration parameters

- **SSID** - Configure the SSID for the WLAN.
- **WLAN Type** - Configure the encryption and authentication to use with this WLAN.
  - **No Authentication and No Encryption** - Configures a network without any authentication. This option also configures the network without encryption. This means that any data transmitted through the network is in plain text. Any device between end points can see the information transmitted. This is the least secure of all network configurations.
  - **Captive Portal Authentication and No Encryption** - Configures a network that uses a RADIUS server to authenticate users before allowing them on to the network. Once on the network, no encryption is used for the data being transmitted through the network. Select this option to use a Web page (either internally or externally hosted) to authenticate users before access is granted to the network.
  - **PSK authentication, WPA2 encryption** - Configures a network that uses PSK authentication and WPA2 encryption. Select this option to implement a pre-shared key that must be correctly shared between the Access Point and requesting clients using this WLAN.
19. Select **Next**. The Typical Setup Wizard displays the RADIUS Server Configuration screen if required. Otherwise, the Typical Setup Wizard displays the Summary and Commit screen.

20. Use the **Radius Server Configuration** screen to configure the users for the onboard RADIUS server. Use the screen to add, modify and remove RADIUS users.

Some WLANs require authentication using the on-board RADIUS server. User accounts must be added for all users that should be authorized by the server.

</tbody>
</table>
21. Select **Add User** to display the dialog to enter user information to add to the RADIUS server user database.

![Add User dialog](image)

22. Enter the following user information:
   - **Username** - Provide a user name used to authenticate the user.
   - **Password** - Provide a password used to authenticate the user.
   - **Confirm Password** - Confirm the password by entering the same password as entered in the Password field.
   - **Description** - Provide a description to identify the user created in the RADIUS server database.

23. To create the entry in the RADIUS server database and add another user, select **Create**. To create the entry in the RADIUS server database and close the Add User dialog, select **Create & Close**.

24. Select **Modify User** on the RADIUS Server Configuration screen to modify information for an existing user from the RADIUS database. Highlight the user entry then select **Modify User**.

**NOTE** The **Username** cannot be modified with this dialog.

25. Select **Delete User** on the RADIUS Server Configuration screen to remove information for an existing user from the RADIUS database. Highlight the user entry and select **Delete User**.

26. Select **Confirm** on the dialog displayed. The entry for the user is removed from the RADIUS database.

27. To dismiss the dialog without adding, modifying or removing entries in the RADIUS server database, select **Cancel**.
28. Select **Next**. The Typical Setup Wizard displays the **Summary and Commit** screen to summarize the screens (pages) and settings updated using the Typical Setup Wizard.

**Access Point Type Page**

Access Point Type: Standalone AP

**Networking Mode Page**

Networking Mode: Router Mode

**LAP Configuration Page**

- LAN Configuration Type: Static IP Address/Subnet
- VLAN ID for the LAN Interface: 1
- Static IP Address/Subnet: 192.168.13.23/24

**VLAN Configuration Page**

- vVLAN Configuration Type: Use DHCP
- Port to External: GE1 Port

**WLAP Configuration**

No user intervention or additional settings are required. It's an additional means of validating the Access Point's updated configuration before it's deployed. However, if a screen displays settings not intended as part of the initial configuration, then any screen can be selected again from within the Navigation Panel and its settings modified accordingly.

29. If the configuration displays as intended, select **Save/Commit** to implement these settings to the Access Point's configuration. If additional changes are warranted based on the summary, either select the target page from the **Navigational Panel**, or use the **Back** and **Next** buttons to scroll to the target screen.
3.1 Antenna Type Configuration

For AP 7161 to operate properly, the antenna type and antenna gain must be configured manually.
Select antenna type with following command:
ap71xx-XXXXXX (config-device-xx-xx-xx-xx-xx-xx-if-radio1)#service antenna-type ap7161-dipole
Select antenna gain with following command:
ap71xx-XXXXXX (config-device-xx-xx-xx-xx-xx-xx-if-radio1)# antenna-gain <units in dBi>
Select VMM antenna type (if available) with following command:
ap71xx-XXXXXX (config-device-xx-xx-xx-xx-xx-xx-if-radio1)# service antenna-type ap7161-vmm
These changes can also be made in the device profile configuration file.

NOTE For FCC and ETSI requirements, set the 2.4GHz antenna gain to 8 dBi and set the 5GHz antenna gain to 10 dBi.

3.2 Automatic Channel Select Override

Under certain conditions (e.g. the presence of a 40 MHz channel intolerant client or a legacy device on the extension channel), a radio which has been configured for 40 MHz channel operation may automatically select the 20 MHz channel. To override or restore automatic channel selection, use the following commands:
ap71xx-XXXXXX (config-device-xx-xx-xx-xx-xx-xx-if-radio1)#service ignore-ch-width-mgmt
ap71xx-XXXXXX (config-device-xx-xx-xx-xx-xx-xx-if-radio1)#no service ignore-ch-width-mgmt
This change can also be made in the device profile configuration file.

6 Regulatory Information

All Zebra devices are designed to be compliant with rules and regulations in locations they are sold and will be labeled as required. Any changes or modifications to Zebra equipment, not expressly approved by Zebra, could void the user’s authority to operate the equipment.

Local language translations are available at the following Website: www.zebra.com/support

Zebra devices are professionally installed, the Radio Frequency Output Power will not exceed the maximum allowable limit for the country of operation.

Antennas: Use only the supplied or an approved replacement antennas. Unauthorized antennas, modifications, or attachments could cause damage and may violate regulations.

6.1 FCC Approval Statement

Federal Communications Commission
Office of Engineering and Technology
Laboratory Division

Interim Plans to Approve UNII Devices Operating in the 5470 - 5725 MHz Band with Radar Detection and DFS Capabilities

The FCC, NTIA, FAA and industry are working to resolve interference to Terminal Doppler Weather Radar (TDWR) systems used near airports that has occurred from some outdoor wireless systems operating in the 5470 MHz – 5725 MHz band. These wireless devices are subject to Section 15.407 of our rules and when operating as a master device they are required to implement radar detection and DFS functions. We are continuing our work to develop long-term equipment authorization test procedures that will ensure that the devices comply with our rules that include protecting the TDWR operations. In the interim, the Commission will now allow certification of wireless master devices with radar detection function and with DFS capability, if they meet the following conditions:

1. Devices will not transmit on channels which overlap the 5600 – 5650 MHz band.¹

2. Devices intended for outdoor use will be further restricted, as follows:

   • Devices must be professionally installed when operating in the 5470 – 5725 MHz band.²
   • Grantees must provide owners, operators and all such installers with specific instructions in their user’s manual on requirements to avoid interference to TDWRs and information that meets the following instructions:
     • Any installation of either a master or a client device within 35 km of a TDWR location shall be separated by at least 30 MHz (center-to-center) from the TDWR operating frequency ³, ⁴, and ⁵.

The devices subject to the requirements in this KDB can select the initial channel for operation to avoid TDWRs and apply the Uniform Channel Spreading requirements (see FCC 06-96 in ET Docket 03-122 released June 30, 2006) on the remaining available frequency band of operation. All the other test procedures including the test
radar patterns remain the same at the present time. A revision to the measurement procedure with modification
to the Uniform Channel Spreading requirement and other changes will be released in the future. The
Commission will also address the issue of any field upgrade option at that time.

2 The grantee must identify the specific expertise and the training required by the installers for installing these
types of devices.

3 In some instances it is possible that a device may be within 35 km of multiple TDWRs. In this case the device
must ensure that it avoids operation within 30 MHz for each of the TDWRs. This requirement applies even if the
master is outside the 35 km radius but communicates with outdoor clients which may be within the 35 km
radius of the TDWRs.

4 The requirement for ensuring 30 MHz frequency separation is based on the best information available to date. If
interference is not eliminated, a distance limitation based on line-of-sight from TDWR will need to be used. In
addition, devices with bandwidths greater than 20 MHz may require greater frequency separation.

- Procedures for the installers and the operators on how to register the devices in the industry-sponsored
database with the appropriate information regarding the location and operation of the device and installer
information is included.

- Devices must meet all of the other requirements specified in Section 15.407, and it is prohibited to include
configuration controls (e.g. country code settings or other options to modify DFS functions) to change the
frequency of operations to any frequency other than those specified on the grant of certification for US
operation.

- All applications for equipment authorization must clearly show compliance with all of the technical
requirements under worst case parameters, under user or operator control, based on frame rates, listen/talk
ratios and user data transfer conditions.

All the devices subject to the DFS requirements must be submitted to the Commission’s Laboratory Division for
pre-grant testing and equipment authorization.8 The applicant must ensure that all equipment authorization
applications subject to this interim procedure include appropriate attestations that the device has no option to
change the DFS parameters and that transmissions are disabled at least in the 5600 – 5650 MHz band. The
application must include the user’s manual with the appropriate installation and operations requirements for the
installers and operators.

We are continuing to evaluate additional measures that may need to be taken to further ensure against
interference caused by 5 GHz outdoor wireless systems located near airports. While manufacturers have an
obligation to ensure that their equipment complies with FCC rules, and must take steps to ensure their devices are
unlikely to cause harmful interference, Section 15.5 of the Commission’s rules also places an obligation on users
of devices to avoid causing interference and to correct any interference that may occur.

We encourage the manufacturers to include information for the users, including the operators and installers, to
ensure that they understand that it is incumbent on them to cooperate with manufacturers to implement any
changes necessary to facilitate compliance.
5 Devices may be optionally designed not to transmit on channels which overlap 5570 – 5680 MHz instead of requiring installers to perform site-by-site adjustments. In that case it is still required that the devices should be installed professionally and the procedures for registering the device in the industry database should be included in the Users Manual.

6 When devices are deployed for mobility, do not assign frequencies of 5580 MHz and 5670 MHz.

7 A voluntary WISPA sponsored database has been developed that allows operators and installers to register the location information of the UNII devices operating outdoors in the 5470 – 5725 MHz band within 35 km of any TDWR location (see http://www.spectrumbridge.com/udia/home.aspx). This database may be used by government agencies in order to expedite resolution of any interference to TDWRs.

8 For example, device software must not have any country code options or software configuration settings which allow an end user to modify the DFS operation or impact the performance of DFS. See KDB 594280.

9 The TCBs are not permitted to approve transmitters with radar detection capabilities. See KDB 628591.

10 The manufacturers may consider taking steps providing clear instructions to operators and installers of devices as to the need to comply with rules for use of the band, guidance on registration of devices and any other processes that are designed to avoid interference. They may use methods that include, but are not limited to, instructions in manuals, notification on product web pages and service bulletins issued for products in the field.

6.3   Wireless Country Approvals

Regulatory markings are applied to the device signifying the radio(s) are approved for use in the following countries: United States, Canada, Australia, and Europe.

Please refer to the Declaration of Conformity (DoC) for details of other country markings: www.zebra.com/doc

**Note 1**: For 2.4 GHz Products: Europe includes, Austria, Belgium, Bulgaria, Czech Republic, Cyprus, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Liechtenstein, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovak Republic, Slovenia, Spain, Sweden, Switzerland and the United Kingdom.

Operation of the device without regulatory approval is illegal.

### 6.4 Health and Safety Recommendations

The Federal Communications Commission (FCC) with its action in ET Docket 96-8 has adopted a safety standard for human exposure to radio frequency (RF) electromagnetic energy emitted by FCC certified equipment. Zebra products meet the uncontrolled environmental limits found in OET-65 and ANSI C95.1, 1991. Proper operation of this radio according to the instructions found in this manual will result in user exposure that is substantially below the FCC recommended limits.

#### 6.4.1   Warnings for the Use of Wireless Devices

Please observe all warning notices with regard to the usage of wireless devices.
6.4.2 Potentially Hazardous Atmospheres
You are reminded of the need to observe restrictions on the use of radio devices in fuel depots, chemical plants etc. and areas where the air contains chemicals or particles (such as grain, dust, or metal powders).

Safety in Hospitals
Wireless devices transmit radio frequency energy and may affect medical electrical equipment. When installed adjacent to other equipment, it is advised to verify that the adjacent equipment is not adversely affected.

6.5 RF Exposure Guidelines

6.5.1 Safety Information
The device complies with internationally recognized standards covering human exposure to electromagnetic fields from radio devices.

6.5.2 Reduce RF Exposure - Use Properly
Only operate the device in accordance with the instructions supplied.

6.5.3 Remote and Standalone Antenna Configurations
To comply with FCC RF exposure requirements, antennas that are mounted externally at remote locations or operating near users at stand-alone desktop of similar configurations must operate with a minimum separation distance of 28 cm from all persons.

6.6 Power Supply
Use only a power-over Ethernet 802.3at compliant solution. The required power rating is 25.5 Watts.

6.7 Wireless Devices - Countries

Country Selection
Select only the country in which you are using the device. Any other selection will make the operation of this device illegal.

Operation in the US
The available channels for 802.11 b/g operation in the US are Channels 1 to 11. The range of channels is limited by firmware.

The FCC requires that the FCC ID label be placed on the outside of the device. If the device is placed in a protective enclosure that requires tools to access, a permanent label with FCC ID must be placed on the exterior of the protective enclosure.
6.8 Radio Frequency Interference Requirements - FCC

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna
- Increase the separation between the equipment and receiver
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

6.8.1 Radio Transmitters (Part 15)

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

6.8.2 Radio Frequency Interference Requirements - Canada

This Class B digital apparatus complies with Canadian ICES-003.

Cet appareil numérique de la classe B est conforme à la norme NMB-003 du Canada.

Devices using the 5.470 – 5.725 GHz band shall not be capable of transmitting in the 5.60-5.65 GHz band in Canada, make sure that Canada is the country selected during setup to ensure compliance.

Radio Transmitters

This device complies with RSS 210 of Industry & Science Canada. Operation is subject to the following two conditions: (1) this device may not cause harmful interference and (2) this device must accept any interference received, including interference that may cause undesired operation.

Ce dispositif est conforme à RSS 210 d’industrie et de la Science Canada. L’opération est sous réserve des conditions suivantes deux conditions: (1) ce dispositif peut ne pas causer l’interférence néfaste et (2) ce dispositif doit accepter n’importe quelle interférence reçue, y compris l’interférence qui peut causer l’opération peu désirée.

To reduce potential radio interference to other users, the antenna type and its gain should be so chosen that the equivalent isotropically radiated power (EIRP) is not more than that permitted for successful communication.
This device has been designed to operate with the antennas listed in this guide, and having a maximum gain of 8 dBi (2.4 GHz) and 10 dBi (5 GHz) for radios one and two. Antennas not included in this list, or having a gain greater than 8 dBi (2.4 GHz) and 10 dBi (5 GHz) for radios one and two, are prohibited for use with this device. This device has been designed to operate with the antennas listed in this guide, and having a maximum gain of 4.5 dBi (2.4 GHz) and 7.5 dBi (5 GHz) for radio three. Antennas not included in this list, or having a gain greater than 4.5 dBi (2.4 GHz) and 7.5 dBi (5 GHz) for radio three, are strictly prohibited for use with this device. The required antenna impedance is 50 ohms.

Label Marking: The Term "IC:" before the radio certification signifies that Industry Canada technical specifications were met.

This device has been designed to operate with the antennas listed in the Enterprise Wireless LAN Antenna Specification Guide. Refer to the guide at www.zebra.com/support.

6.9 CE Marking and European Economic Area (EEA)

The use of 2.4 GHz RLAN’s, for use through the EEA, have the following restrictions:

- Maximum radiated transmit power of 100 mW EIRP in the frequency range 2.400 - 2.4835 GHz
- France outside usage, the equipment is restricted to 2.400-2.45 GHz frequency range.
- Italy requires a user license for outside usage

6.10 Statement of Compliance

Zebra hereby declares that this device is in compliance with the essential requirements and other relevant provisions of Directive 1999/5/EC. A Declaration of Conformity may be obtained from www.zebra.com/doc.
6.11 Other Countries

Australia

Use of 5 GHz RLAN’s in Australia is restricted in the following band: 5.50 – 5.65 GHz.

Brazil

Regulatory Declarations for AP 7161 - BRAZIL

Note: The certification mark applied to the AP 7161 is for Restrict Radiation Equipment. This equipment operates on a secondary basis and does not have the right for protection against harmful interference from other users including same equipment types. Also this equipment must not cause interference to systems operating on a primary basis.

For more information consult the website http://www.anatel.gov.br.

Declarações Regulamentares para AP 7161 - Brasil

Chile

Este equipo cumple con la Resolución No 403 de 2008, de la Subsecretaria de telecomunicaciones, relativa a radaciones electromagnéticas.

This device complies with the Resolution No 403 of 2008, of the Undersecretary of telecommunications, relating to electromagnetic radiation.

Mexico

Restrict Frequency Range to: 2.450 – 2.4835 GHz.

Taiwan

NOTICE!

According to: Administrative Regulations on Low Power Radio Waves Radiated Devices

Article 12

Without permission granted by the DGT, any company, enterprise, or user is not allowed to change frequency, enhance transmitting power or alter original characteristic as well as performance to a approved low power radio-frequency devices.
Article 14

The low power radio-frequency devices shall not influence aircraft security and interfere with legal communications; if found, the user shall cease operating immediately until no interference is achieved. The said legal communications means radio communications are operated in compliance with the Telecommunications Act. The low power radio-frequency devices must be susceptible with the interference from legal communications or ISM radio wave radiated devices.

Wireless device operates in the frequency band of 5.25-5.35 GHz, limited for indoor use only.

In 5.25–5.35GHz 帶內操作之無線資訊傳輸設備，限於室內使用
6.12 Waste Electrical and Electronic Equipment (WEEE)

**English:** For EU Customers: All products at the end of their life must be returned to Zebra for recycling. For information on how to return product, please go to: [www.zebra.com/weee](http://www.zebra.com/weee).

**Français:** Clients de l’Union Européenne: Tous les produits en fin de cycle de vie doivent être retournés à Zebra pour recyclage. Pour de plus amples informations sur le retour de produits, consultez : [www.zebra.com/weee](http://www.zebra.com/weee).

**Español:** Para clientes en la Unión Europea: todos los productos deberán entregarse a Zebra al final de su ciclo de vida para que sean reciclados. Si desea más información sobre cómo devolver un producto, visite: [www.zebra.com/weee](http://www.zebra.com/weee).

**Български:** За клиенти от ЕС: След края на полезния им живот всички продукти трябва да се връщат на Zebra за рециклиране. За информация относно връщането на продукти, моля отидете на адрес: [www.zebra.com/weee](http://www.zebra.com/weee).

**Italiano:** per i clienti dell’UE: tutti i prodotti che sono giunti al termine del rispettivo ciclo di vita devono essere restituiti a Zebra al fine di consentirne il riciclaggio. Per informazioni sulle modalità di restituzione, visitare il seguente sito Web: [www.zebra.com/weee](http://www.zebra.com/weee).

**Português:** Para clientes da UE: todos os produtos no fim de vida devem ser devolvidos à Zebra para reciclagem. Para obter informações sobre como devolver o produto, visite: [www.zebra.com/weee](http://www.zebra.com/weee).

**Nederlands:** Voor klanten in de EU: alle producten dienen aan het einde van hun levensduur naar Zebra te worden teruggezonden voor recycling. Raadpleeg [www.zebra.com/weee](http://www.zebra.com/weee) voor meer informatie over het terugzenden van producten.

**Polski:** Klienci z obszaru Unii Europejskiej: Produkty wycofane z eksploatacji należy zwrócić do firmy Zebra w celu ich utylizacji. Informacje na temat zwrotu produktów znajdzie się na stronie internetowej [www.zebra.com/weee](http://www.zebra.com/weee).

**Čeština:** Pro zákazníky z EU: Všechny produkty je nutné po skončení jejich životnosti vrátit společnosti Zebra k recyklyaci. Informace o způsobu vrácení produktu najdete na webové stránce: [www.zebra.com/weee](http://www.zebra.com/weee).

**Eesti:** EL klientidele: kõik tooted tuleb nende eluea lõppedes tagastada taaskasutamise eesmärgil Zebra'ile. Lisainfot hankige toote tagastamise kohta külalaste palun aadressil: [www.zebra.com/weee](http://www.zebra.com/weee).

**Magyar:** Az EU-ban vásárlóknak: Minden tönkrement termék a Zebra vállalathoz kell eljuttatni újrahasznosítás céljából. A termék visszajuttatásának modójával kapcsolatos tudnivalókért látogasson el a [www.zebra.com/weee](http://www.zebra.com/weee) weboldalra.

**Suomi:** Asiakkaat Euroopan unionin alueella: Kaikki tuotteet on palautettava kierrätettäväksi Zebra-yhtiöön, kun tuotetta ei enää käytetä. Lisätietoja tuotteen palauttamisesta on osoitteessa [www.zebra.com/weee](http://www.zebra.com/weee).

**Dansk:** Til kunder i EU: Alle produkter skal returneres til Zebra til recirculering, når de er utdjet. Læs oplysningerne om returnering af produkter på: [www.zebra.com/weee](http://www.zebra.com/weee).

**Ελληνικά:** Για πελάτες στην Ε.Ε.: Όλα τα προϊόντα, στο τέλος της διάρκειας ζωής τους, πρέπει να επιστρέφονται στην Zebra για ανακύκλωση. Για περισσότερες πληροφορίες σχετικά με την επιστροφή ενός προϊόντος, επισκεφθείτε τη διεύθυνση [www.zebra.com/weee](http://www.zebra.com/weee) στο Διαδίκτυο.

7 Support

If you have a problem with your equipment, contact support for your region.

Contact information is available at: www.zebra.com/support

When contacting support, please provide the following information:

- Serial number of the unit
- Model number or product name
- Software type and version number

Support responds to calls by e-mail, telephone, or fax within the time limits set forth in support agreements. If you purchased your product from a business partner, contact that business partner for support.

Customer Support Web Sites

The Support site, located at www.zebra.com/support provides information and online assistance including developer tools, software downloads, product manuals and online repair requests.

Manuals

8 End-User License Agreement

This End-User Software License Agreement ("End-User License Agreement") is between Symbol Technologies Inc. (herein "Symbol Technologies") and End-User Customer to whom Symbol Technologies' proprietary software or Symbol Technologies Products containing embedded, pre-loaded, or installed software ("Products") is made available. This End-User License Agreement contains the terms and conditions of the license Symbol Technologies is providing to End-User Customer, and End-User Customer's use of the Software and Documentation. By using, downloading or installing this software, you or the entity that you represent ("End-User Customer") are consenting to be bound by and are becoming a party to this End-User License Agreement.

1. DEFINITIONS

"Documentation" means product and software documentation that specifies technical and performance features and capabilities, and the user, operation and training manuals for the Software (including all physical or electronic media upon which such information is provided).

"Open Source Software" means software with either freely obtainable source code license for modification, or permission for free distribution.

"Open Source Software License" means the terms or conditions under which the Open Source Software is licensed.

"Software" (i) means proprietary software in object code format, and adaptations, translations, decompilations, disassemblies, emulations, or derivative works of such software; (ii) means any modifications, enhancements, new versions and new releases of the software provided by Symbol Technologies; and (iii) may contain items of software owned by a third party supplier. The term "Software" does not include any third party software provided under separate license or third party software not licensable under the terms of this Agreement. To the extent, if any, that there is a separate license agreement packaged with, or provided electronically with, a particular Product that becomes effective on an act of acceptance by the end user, then that agreement supersedes this End-User License Agreement as to the end use of that particular Product.

2. GRANT OF LICENSE

2.1 Subject to the provisions of this End-User License Agreement, Symbol Technologies grants to End-User Customer a personal, limited, non-transferable (except as provided in Section 4), and non-exclusive license under Symbol Technologies’ copyrights and confidential information embodied in the Software to use the Software, in object code form, and the Documentation solely in connection with End-User
Customer’s use of the Products. This End-User License Agreement does not grant any rights to source code.

2.2 If the Software licensed under this End-User License Agreement contains or is derived from Open Source Software, the terms and conditions governing the use of such Open Source Software are in the Open Source Software Licenses of the copyright owner and not this End-User License Agreement. If there is a conflict between the terms and conditions of this End-User License Agreement and the terms and conditions of the Open Source Software Licenses governing End-User Customer’s use of the Open Source Software, the terms and conditions of the license grant of the applicable Open Source Software Licenses will take precedence over the license grants in this End-User License Agreement. If requested by End-User Customer, Symbol Technologies will use commercially reasonable efforts to: (i) determine whether any Open source Software is provided under this End-User License Agreement; (ii) identify the Open Source Software and provide End-User Customer a copy of the applicable Open Source Software License (or specify where that license may be found); and, (iii) provide End-User Customer a copy of the Open Source Software source code, without charge, if it is publicly available (although distribution fees may be applicable).

3. LIMITATIONS ON USE

3.1 End-User Customer may use the Software only for End-User Customer’s internal business purposes and only in accordance with the Documentation. Any other use of the Software is strictly prohibited and will be deemed a breach of this End-User License Agreement. Without limiting the general nature of these restrictions, End-User Customer will not make the Software available for use by third parties on a “time sharing,” “application service provider,” or “service bureau” basis or for any other similar commercial rental or sharing arrangement.

3.2 End-User Customer will not, and will not allow or enable any third party to: (i) reverse engineer, disassemble, peel components, decompile, reprogram or otherwise reduce the Software or any portion to a human perceptible form or otherwise attempt to recreate the source code; (ii) modify, adapt, create derivative works of, or merge the Software with other software; (iii) copy, reproduce, distribute, lend, or lease the Software or Documentation to any third party, grant any sublicense or other rights in the Software or Documentation to any third party, grant any sublicense or other rights in the Software or Documentation to any third party, or take any action that would cause the Software or Documentation to be placed in the public domain; (iv) remove, or in any way alter or obscure, any copyright notice or other notice of Symbol Technologies’ proprietary rights; (v) provide, copy, transmit, disclose, divulge or make the Software or Documentation available to, or permit the use of the Software by any third party or on any machine except as expressly authorized by this Agreement; or (vi) use, or permit the use of, the Software in a manner that would result in the production of a copy of the Software
solely by activating a machine containing the Software. End-User Customer may make one copy of Software to be used solely for archival, back-up, or disaster recovery purposes; provided that End-User Customer may not operate that copy of the Software at the same time as the original Software is being operated. End-User Customer may make as many copies of the Documentation as it may reasonably require for the internal use of the Software.

3.3 Unless otherwise authorized by Symbol Technologies in writing, End-User Customer will not, and will not enable or allow any third party to: (i) install a licensed copy of the Software on more than one unit of a Product; or (ii) copy onto or transfer Software installed in one unit of a Product onto another device.

3.4 If End-User Customer is purchasing Products that require a site license, End-User Customer must purchase a copy of the applicable Software for each site at which End-User Customer uses such Software. End-User Customer may make one additional copy for each computer owned or controlled by End-User Customer at each such site. End-User Customer may temporarily use the Software on portable or laptop computers at other sites. End-User Customer must provide a written list of all sites where End-User Customer uses or intends to use the Software.

4. TRANSFERS

4.1 End-User Customer will not transfer the Software or Documentation to any third party without Symbol Technologies’ prior written consent. Symbol Technologies’ consent may be withheld at its discretion and may be conditioned upon transferee paying all applicable license fees and agreeing to be bound by this End-User License Agreement.

5. OWNERSHIP AND TITLE

5.1 Symbol Technologies, its licensors, and its suppliers retain all of their proprietary rights in any form in and to the Software and Documentation, including, but not limited to, all rights in patents, patent applications, inventions, copyrights, trademarks, trade secrets, trade names, and other proprietary rights in or relating to the Software and Documentation. No rights are granted to End-User Customer under this Agreement by implication, estoppel or otherwise, except for those rights which are expressly granted to End-User Customer in this End-User License Agreement. All intellectual property developed, originated, or prepared by Symbol Technologies in connection with providing the Software, Products, Documentation or related services remains vested exclusively in Symbol Technologies, and End-User Customer will not have any shared development or other intellectual property rights.
6. CONFIDENTIALITY

6.1 End-User Customer acknowledges that the Software contains valuable proprietary information and trade secrets and that unauthorized dissemination, distribution, modification, reverse engineering, disassembly or other improper use of the Software will result in irreparable harm to Symbol Technologies for which monetary damages would be inadequate. Accordingly, End-User Customer will limit access to the Software to those of its employees and agents who need to use the Software for End-User Customer’s internal business.

7. MAINTENANCE AND SUPPORT

7.1 No maintenance or support is provided under this End-User License Agreement. Maintenance or support, if available, will be provided under a separate Software maintenance and support agreement.

8. LIMITED WARRANTY AND LIMITATION OF LIABILITY

8.1 Unless otherwise specified in the applicable warranty statement, the Documentation or in any other media at the time of shipment of the Software by Symbol Technologies, and for the warranty period specified therein, for the first 120 days after initial shipment of the Software to the End-User Customer, Symbol Technologies warrants that the Software, when installed and/or used properly, will be free from reproducible defects that materially vary from its published specifications. Symbol Technologies does not warrant that End-User Customer’s use of the Software or the Products will be uninterrupted or error-free or that the Software or the Products will meet End-User Customer’s particular requirements.

8.2 SYMBOL TECHNOLOGIES’ TOTAL LIABILITY, AND END-USER CUSTOMER’S SOLE REMEDY, FOR ANY BREACH OF THIS WARRANTY WILL BE LIMITED TO, AT SYMBOL TECHNOLOGIES’ OPTION, REPAIR OR REPLACEMENT OF THE SOFTWARE OR PAYMENT OF END-USER CUSTOMER’S ACTUAL DAMAGES UP TO THE AMOUNT PAID TO SYMBOL TECHNOLOGIES FOR THE SOFTWARE OR THE INDIVIDUAL PRODUCT IN WHICH THE SOFTWARE IS EMBEDDED OR FOR WHICH IT WAS PROVIDED. THIS WARRANTY EXTENDS ONLY TO THE FIRST END-USER CUSTOMER; SUBSEQUENT TRANSFEREES MUST ACCEPT THE SOFTWARE “AS IS” AND WITH NO WARRANTIES OF ANY KIND. SYMBOL TECHNOLOGIES DISCLAIMS ALL OTHER WARRANTIES, EXPRESS OR IMPLIED, INCLUDING THE IMPLIED WARRANTIES OF MERCHANTABILITY, NON-INFRINGEMENT, AND FITNESS FOR A PARTICULAR PURPOSE.

8.3 IN NO EVENT WILL SYMBOL TECHNOLOGIES BE LIABLE FOR SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES, INCLUDING, BUT NOT LIMITED TO, LOSS OF USE, TIME OR DATA, INCONVENIENCE, COMMERCIAL LOSS, LOST PROFITS, OR SAVINGS, TO THE FULL EXTENT SUCH MAY
9. **TERM AND TERMINATION**

9.1 Any use of the Software, including but not limited to use on the Products, will constitute End-User Customer’s agreement to this End-User License Agreement. End-User Customer’s right to use the Software will continue for the life of the Products with which or for which the Software and Documentation have been provided by Symbol Technologies, unless End-User Customer breaches this End-User License Agreement, in which case this End-User License Agreement and End-User Customer’s right to use the Software and Documentation may be terminated immediately by Symbol Technologies. In addition, if Symbol Technologies reasonably believes that End-User Customer intends to breach this End-User License Agreement Symbol Technologies may, by notice to End-User Customer, terminate End-User Customer’s right to use the Software.

9.2 Upon termination, Symbol Technologies will be entitled to immediate injunctive relief without proving damages and, unless End-User Customer is a sovereign government entity, Symbol Technologies will have the right to repossess all copies of the Software in End-User Customer’s possession. Within thirty (30) days after termination of End-User Customer’s right to use the Software, End-User Customer must certify in writing to Symbol Technologies that all copies of such Software have been returned to Symbol Technologies or destroyed.

10. **UNITED STATES GOVERNMENT LICENSING PROVISIONS**

10.1 This Section applies if End-User Customer is the United States Government or a United States Government agency. End-User Customer’s use, duplication or disclosure of the Software and Documentation under Symbol Technologies’ copyrights or trade secret rights is subject to the restrictions set forth in subparagraphs (c)(1) and (2) of the Commercial Computer Software-Restricted Rights clause at FAR 52.227-19 (JUNE 1987), if applicable, unless they are being provided to the Department of Defense. If the Software and Documentation are being provided to the Department of Defense, End-User Customer’s use, duplication, or disclosure of the Software and Documentation is subject to the restricted rights set forth in subparagraph (c)(1)(ii) of the Rights in Technical Data and Computer Software clause at DFARS 252.227-7013 (OCT 1988), if applicable. The Software and Documentation may or may not include a Restricted Rights notice, or other notice referring to this End-User License Agreement. The provisions of this End-User License Agreement will continue to apply, but only to the extent that they are
consistent with the rights provided to the End-User Customer under the provisions of the FAR and DFARS mentioned above, as applicable to the particular procuring agency and procurement transaction.

11. GENERAL

11.1 Copyright Notices. The existence of a copyright notice on the Software will not be construed as an admission or presumption that public disclosure of the Software or any trade secrets associated with the Software has occurred.

11.2 Compliance with Laws. End-User Customer acknowledges that the Software is subject to the laws and regulations of the United States and End-User Customer will comply with all applicable laws and regulations, including export laws and regulations of the United States. End-User Customer will not, without the prior authorization of Symbol Technologies and the appropriate governmental authority of the United States, in any form export or re-export, sell or resell, ship or reship, or divert, through direct or indirect means, any item or technical data or direct or indirect products sold or otherwise furnished to any person within any territory for which the United States Government or any of its agencies at the time of the action, requires an export license or other governmental approval. Violation of this provision is a material breach of this Agreement.

11.3 Third Party Beneficiaries. This End-User License Agreement is entered into solely for the benefit of Symbol Technologies and End-User Customer. No third party has the right to make any claim or assert any right under this Agreement, and no third party is deemed a beneficiary of this End-User License Agreement. Notwithstanding the foregoing, any licensor or supplier of third party software included in the Software will be a direct and intended third party beneficiary of this End-User License Agreement.

11.4 Waiver. No waiver of a right or remedy of a Party will constitute a waiver of another right or remedy of that Party.

11.5 Assignments. Symbol Technologies may assign any of its rights or sub-contract any of its obligations under this End-User License Agreement or encumber or sell any of its rights in any Software, without prior notice to or consent of End-User Customer.

11.6 Causes of Action. End-User Customer must bring any action under this End-User License Agreement within one year after the cause of action arises except that warranty claims must be brought within the applicable warranty period.

11.7 Entire Agreement and Amendment. This End-User License Agreement contains the parties’ entire agreement regarding End-User Customer’s use of the Software and may be amended only in a writing signed by both parties, except that Symbol Technologies may modify this End-User License Agreement as necessary to comply with applicable laws and regulations.
11.8 Governing Law. This End-User License Agreement is governed by the laws of the State of Delaware in the United States to the extent that they apply and otherwise by the internal substantive laws of the country to which the Software is shipped if End-User Customer is a sovereign governmental entity. The terms of the U.N. Convention on Contracts for the International Sale of Goods do not apply. In the event that the Uniform Computer Information Transaction Act, any version of this Act, or a substantially similar law (collectively "UCITA") becomes applicable to a Party's performance under this Agreement, UCITA does not govern any aspect of this End-User License Agreement or any license granted under this End-User License Agreement, or any of the parties' rights or obligations under this End-User License Agreement. The governing law will be that in effect prior to the applicability of UCITA.

11.8 Dispute Resolution. Unless End-User Customer is a sovereign governmental entity, any dispute arising from or in connection with this End-User License Agreement shall be submitted to the sole and exclusive forum of the state and federal courts sitting in New Castle County, Delaware (the "Delaware Courts"), and each Party irrevocably submits to the jurisdiction of the Delaware Courts for the litigation of such disputes. Each Party hereby irrevocably waives, and agrees not to assert in any suit, action or proceeding brought in the Delaware Courts, any claim or defense that the Party is not subject to the jurisdiction of the Delaware Courts, that the Delaware Courts are an inconvenient forum, or that the Delaware Courts are an improper venue.
