Welcome

ZebraDesigner for mySAP Business Suite enables the user to create and download label designs to printers for later recall and printing from mySAP Business Suite.

ZebraDesigner for mySAP Business Suite V2 offers both the label design features and printer configuration tools which enable printing. The easy to use variable wizard makes it simple to link variable information to text, barcode and RFID tags on the label. Graphics and fonts can be easily downloaded to the printer to accelerate throughput while allowing for label design flexibility.

Once label designs are complete, the label template can be distributed to one or many printers with a single click. As new labeling needs emerge, it’s “click-simple” to create or edit existing designs. Designing a label has never been easier!

System Requirements

- Pentium based computer with at least 128 MB of RAM.
- 130 MB of available hard disk space.
- VGA monitor or better.
- ZDesigner Printer Drivers.
- Terminal Services, Remote Desktop and Virtual Machines are not supported.
Wizard.

Licensing in ZebraDesigner for mySAP Buisness Suite 2 is controlled by the use of a license number. The number can be entered once the software has been installed. If the package is installed in demo mode, a license number can be entered via the License Activation Wizard.

DEMO limitations

The word Demo will be printed on the label. Graphics will be printed with the word “demo” on them.

Directories

The application will be installed into the \Program Files\Zebra Technologies\ZebraDesigner for mySAP Business Suite 2 by default. This location can be changed during installation. Sub-directories that are created include:

- BIN - program files.
- Drivers - driver related files.
- Samples - Sample labels, sample fonts and sample graphics.
- Support - Reference Guide plus mySAP Device Types
- Templates - Exported formats.

Additionally, a sub-directory in the current users \My Documents directory called \My Labels will be created and used as the default directory for label information. Sub-directories to \My Documents\My Labels include:

- Forms - Not used by Zebra Designer.
- Graphics - default for any graphic images used in the labels.
- Labels - default for any new labels.
- Stocks - default for information about any new stock labels that are defined.

Supported Printers

The following Zebra printers are supported in this version:

- 105SL 203DPI
- 105SL 300DPI
- 105SLPlus-203dpi ZPL
- 105SLPlus-300dpi ZPL
- 110PAX4 203DPI
- 110PAX4 300DPI
- 110Xi4 203 dpi

Tips & Advice

1. When entering values for RSS composite bar codes, you need to provide the value for the linear and composite (2D) parts at the same time. Use the following syntax for entering values for RSS composite bar codes. The pipe character (|) is used to distinguish between the components.

Syntax: <linear part>|<composite part>
Example: 12345|description

1. By double clicking on the name of the printer in the status bar at the bottom of the design screen, the user can quickly gain access to the printer settings dialogs.
2. Design your label using internal fonts, bar codes and counters to improve throughput.
3. Objects can be arranged with respect to each other by selecting the objects and clicking the desired alignment button.
4. Objects can be arranged with respect to the label by holding the ctrl button when the user presses the alignment button.
5. It is important to remember to add the / and space character to scripts when creating user SAP scripts.
6. To print Unicode content, please be sure to use the Unicode device types, available from SAP. See the document "REFGUIDE.pdf" that is included in the "C:\Program Files\Zebra Technologies\ZebraDesigner for mySAP Business Suite 2\Support" directory.
7. When defining a Multi-line Variable field, the "Maximum number of characters" setting refers to the maximum number of characters per line. It does not refer to the total maximum number of characters for the variable field. Entering the maximum number of characters required my cause the field to be larger that will fit on the label. Enter a small number for "maximum number of characters" and resize the field on screen by holding the shift key and dragging the box. This will resize the field.
on screen by holding the shift key and dragging the box. This will resize the field without resizing the text to allow more characters to be printed in the field.

8. The Status Monitor regularly checks the printer for current status information. When the driver is being used over a network connection, this can have the effect of consuming connection ports that would otherwise be used for accepting print jobs at the printer. If the Status Monitor is in use and you are experiencing a delay in printing, try right clicking over the Status Monitor in the system tray (by the clock) and closing the Status Monitor.

Known Issues

1. When using time or date fields with the Shift-Drag feature, please note that the prefix or suffix function should not be used, as the variable field length and justification can cause the time or date field to overwrite the prefix or suffix information.

2. If the memory slot to be used is not defined when using the Font Downloader, the memory location entered into the format could be incorrect. Please make sure that the memory slot you define in the Font Downloader is the same one you are going to store the format to.

3. It is currently not possible to encode the date and time in a RFID tag.

4. To change the language in the Font Downloader, it must be run from the Start menu.

5. The file names of graphics used should be no longer than eight characters.

6. File names should not contain the character being used on the printer as the control prefix or the command prefix. The default values for these prefixes are ~ and ^.

7. When using the Remove Printer utility, it is recommended that users remove printers individually, rather than multiple printers at one time.

8. When changing the Command Font prefix or suffix, it is recommended that the change be made from the driver user interface, rather than from the ZebraDesigner for mySAP Business Suite interface.

9. When using the Test Print function, please note that if the printer is instructed to automatically add a check digit at print time, it will add the check digit, resulting in a printed barcode which will contain more characters than are displayed in the design environment.

10. When using the Suffix/Prefix feature in a Date or Time field, it is recommended that the suffix or prefix NOT contain the characters %, { or #. These characters are also used to control the formatting of fields printed with the printer’s internal clock.

11. When using the Font & Graphic Downloader to create a memory card, it is recommended that the memory location selected for the memory card be the same location in which label formats are going to be stored.

12. Variable Maxicode barcodes are not supported.

13. Version 1 of the ZebraDesigner Label Design Products cannot be used with the Version 2 and above ZebraDesigner printer drivers. If you are using a Version 1 ZebraDesigner label design product, use the drivers that came with that version.

14. Version 2 of the ZebraDesigner Label Design Products cannot be used with the Version 1 ZebraDesigner printer drivers. If you are using a Version 2 ZebraDesigner label design product, use the drivers that came with that version.

15. In Windows 7 and Windows 2008 R2, if the user right clicks over a text field and selects “Properties” and then clicks “Select” the fonts that are native on the printer will not be displayed as selectable. They are displayed and selectable if the user clicks on a text field and then uses the drop-down menu in the Text Toolbar within the Label Design Environment.
16. If Permissions on the computer do not allow the driver to write in the Registry then the Command Fonts and/or Stocks Tabs in the driver dialogs will have buttons disabled. To change Command Fonts and Stocks, open the Printers folder the in Control Panel, select the printer and then open its “Printing Preferences”. Then the user will be able to modify Command Fonts and Stocks. These properties are set per device and not per document.

17. Installing this version of ZebraDesigner on the same computer that has an installation of ZDownloader v3.00 or earlier may cause an issue where licenses cannot be activated in ZDownloader. This is due to a later version of a Windows service component installed by ZebraDesigner. It’s recommended to upgrade the version of ZDownloader or use v3.00 on a different computer.

18. ZebraDesigner versions after 2.5.0.9362 require Microsoft Visual C++ 2008 x86 runtime components which ZebraDesigner will install. If for any reason the installation of the runtime files is unsuccessful, or they are not present on the computer, it may result in the message "Method zPostProcessorInit is not available in the post processor!" when starting ZebraDesigner for XML. If this occurs, it’s suggested the runtime files be installed from here.

</table>
| 18 Apr 2012 | 2.2.3.4266 | - Support for Quick Creation of a New Empty Label – Ctrl-Shift N will create a blank label without running the Label Creation Wizard.  
- Updated Support for Maxicode Bar Code.  
- Improved WYSIWYG when Moving/Resizing Objects.  
- Bar Code Update: Custom Ratios and Space Correction.  
- Multiple Label Selection is Available in the File Open Dialog Box.  
- Support for Windows Vista Restart Manager.  
- Better Support for Handling of Missing Graphic Files.  
- Graphics can be stored in the .lbl file.  
- Decimal Point Font Size for Scalable fonts.  
- Support for Unicode Text files.  
- Support for 64-bit printer drivers.  
- Updated RFID tag support (Gen 2, Gen 1).  

- Improvements to license system.  
- Added ability to de-activate license during un-installation.  
- The font section is now created correctly in the exported ITF file.  
- Graphic data in the exported ITF file is now preceded with /(.  
- Optimized the export process when using large True Type Fonts. Previously the application would appear to hang.  
- The first line of the exported ITF file is now preceded with /(.  
- The ^CI17 and ^F8 commands are now present in the recall section of the ZPL. The correct characters will now print when using Unicode compliant fonts.  
- Corrected an issue where the ITF file was not generated if the user selected a folder other than the default. |
| 25 Oct 2012 | 2.2.3.4271 | - Updates to be Windows 8 compatible.  
- Executables are now signed with Zebra Technologies digital signature.  
- Added support for the following ZPL printers:  
  - 105SLPlus  
  - QLn420  
  - iMZ220  
  - iMZ320 |
- Optimized the order of ZPL commands to improve throughput when using RFID.
- Added Turkish language option.
- Corrected an issue where the test print did not accurately represent the exported label.
- Corrected an issue where the ^WV command was not generated when switching between EPC Class 0 (96Bit) and Impinj (Class 0+) tag settings.
- Updated QR Code options to better support Asian character encoding.
- Corrected an issue when using the Royal Mail Barcode option. The correct data length can now be entered.
- Improvements to licensing system.
- Added support for Adobe Photoshop (PSD) graphic files.
- UPC E1 barcode check digit is now calculated correctly.
- Corrected data input for Pharmacode which now is limited to 6 numeric characters.
- Added 36x36 aspect ratio option for Datamatrix.
- EAN-14 is now generated with application identifier (01).
- Corrected an issue where special character <CR> was not displayed in the barcode dialog when the dialog was closed and re-opened.
- Corrected an issue where Shift + Up / Down key did not resize the text object.
- Added support for the following ZPL printer models:
  - ZD500R
  - ZD500
  - ZT410
  - ZT410R
  - ZT420
  - ZT420R
- Removed support for the following printer models that have past their Service & Support discontinuation date:
  - 110 PAX3
  - 170 PAX3
  - 140 XiIII
  - 170 XiIII
  - 220 XiIII
  - 2746e
  - 90 XiIII
  - 90 XiIII Plus
  - 96 XiIII
  - 96 XiIII Plus
<table>
<thead>
<tr>

</tr>
</thead>
<tbody>
<tr>
<td>26 Mar 2014</td>
<td>2.5.0.9325</td>
<td>- Corrected an issue where selecting a language other than English during installation generated an error.</td>
</tr>
</tbody>
</table>
| 01 Jun 2015| 2.5.0.9352| - Removed the 'Read and Store RFID Tag Data' button as the product does not support that functionality.  
- Added an option to show or hide field names.  
- Improvements to licensing system.  
- Corrected an issue where labels containing a GS1 QR code could not be opened.  
- Corrected an issue during uninstallation where the license de-activation would fail if dahses were used when entering the license number.  
- Microsoft has ended support for Windows XP ([http://windows.microsoft.com/en-us/windows/end-support-help](http://windows.microsoft.com/en-us/windows/end-support-help)). This release aligns to that decision, with support for Windows XP having been removed.  
- There is nothing implemented to prevent this driver from running on Windows XP. However, this and future versions are not tested on Windows XP.  
- Added support for the following ZPL printer models:  
  - ZD410  
  - ZD420  
  - ZR338  
  - ZR628  
  - ZR638  
  - ZT410R 600dpi |
<p>| 08 Jul 2015| 2.5.0.9362| - Corrected an issue where the installation would not upgrade the licensing service when upgrading from |</p>
<table>
<thead>
<tr>
<th>Date</th>
<th>Version</th>
<th>Changes</th>
</tr>
</thead>
</table>
| 01 Oct 2015| 2.5.0.9384 | - This release is supported on Windows 10.  
- The \(^{RL}\) command is now used to lock RFID tags on printers supporting the command. This requires use of the driver version included in the installation.  
- Corrected an issue where menu items were displayed in English when the language was set to Portuguese.  
- The option to use RFID EPC encoding has been disabled. The format recall printing method requires using field numbers (\(^{FN}\)) but field numbers do not support accessing specific EPC bit fields.  
- Corrected an issue where the output was incorrect when using an incrementing counter.  
- Microsoft has ended extended support for Windows Server 2003. This release aligns to that decision, with support for Windows Server 2003 having been removed.  
- There is nothing implemented to prevent this release from running on Windows Server 2003. However, this and future versions are not tested on Windows Server 2003. |
| 04 Apr 2016| 2.5.0.9385 | - Corrected an issue where on some computers that have the font size set to 125%, some elements were positioned incorrectly and unaccessible on the dialogs.  
- Corrected the Printer Tools menu when the language is set to Portuguese (Brazilian).  
- Support for Gen2 v2 RFID tags is available when using ZDesigner driver v5.1.07.6289 and later.  
- \(^{CI17}\) and \(^{F8}\) commands are no longer generated in the recall section. This caused non Unicode fields to not print. |
| 02 Nov 2016| 2.5.0.9393 | - Updated the EULA in the distribution.  
- Removed a url reference in the help.  
- Added support for the following ZPL printer models:  
  - ZQ310  
  - ZQ320  
  - ZT510  
  - ZT610  
  - ZT610R  
  - ZT620  
  - ZT620R |
