Description

The following changes and fixes have been included in this CFE:

SPR NO	Synopsis
SPR-29574, SPR-29691	Fixed issue of ANSI task randomly stopping. Set process affinity mask for running on a single processor core to avoid potential concurrency issue. Improved message queueing methods and adjusted data types for 64-bit processor compatibility.

Device Compatibility

This software release has been approved for use with the following Zebra devices.

Device	Operating System
Server or virtual machines	Windows Server 2008
	Windows Server 2012
	Windows Server 2016

Component Contents

1. TekTerm Server installer

Installation Requirements

- P3 1GHz CPU or higher, P4 3.4GHz recommended
- 512 MB RAM or more, 2GB recommended
- 10 GB Hard drive or more

If installing on 9500 servers, existing software should be completely removed by uninstalling from Control Panel - Add-Remove programs. Please back up config.usr files before uninstalling.

Installation Instructions

Please follow the installation wizard.
