## Description

Thank you for selecting Motorola Enterprise as your mobility solution tool provider. The "Motorola MC18N0 Windows CE7.0 Platform SDK v7.0" provides the tools necessary for creating standard C/C++ applications for the MC18N0 running Windows CE v7.0.

*Please note that although this Platform SDK can be used to develop standard Windows CE applications, it does not provide support for the Motorola Symbol Value-Add APIs, such as those used to implement scanning applications. To access the Motorola Symbol API, this kit must be used in conjunction with SMDK for eVC4, which is available for download from the Motorola Developer Community.*

For the latest software updates, go to the **Motorola Developer Community** Web site at:

<http://developer.motorola.com/>

For more information on Windows CE development and Motorola Enterprise Windows CE platforms, please visit our **Products** Web site at:

<http://www.motorola.com/staticfiles/Business/US-EN/EnterpriseMobility/homepage/index.html>

*Thank you,*

*The Motorola Enterprise Software Development Team*

---

## Installation

The following software packages must be installed prior to the installation of the Platform SDK for MC18. Most are available as a download from Microsoft's website.

- Microsoft Windows 2000, Windows XP or Windows Vista or Windows 7 or Windows 8 Operating Systems
- [Microsoft ActiveSync 4.5](#) or higher.
- [Microsoft Visual Studio 2005](#) with [SP1](#) or [Microsoft Visual Studio 2008](#).

NOTE: Before installing any version of MC18 PSDK, please uninstall any earlier versions of the same.

NOTE: MC18 PSDK installation process fails if Microsoft Visual Studio 2003 is installed together with Visual Studio 2008 on the same PC.

NOTE: MC18 PSDK installation (exe version) process fails on Windows 2008 server.

Once this package has been installed, Microsoft Visual Studio IDE will contain a new selection for the **Motorola MC18N0 Windows CE7.0 PSDK** in the "Build->Configuration Manager" menu field. This entry must be selected when creating and debugging applications for MC18 device.
