

The PlatformCE600 .MSI Installer provides a complete development environment for creating applications for Psion Teklogix devices on Microsoft® Windows® Embedded CE 6.0 using Visual Studio (2005 or 2008).

While it is analogous to the Windows CE 5.0: Standard Software Development Kit (SDK) (<http://www.microsoft.com/downloads/details.aspx?familyid=FA1A3D66-3F61-4DDC-9510-AE450E2318C3&displaylang=en>), this version includes more distinct custom changes that Psion Teklogix has made for our Windows Embedded CE 6.0 platforms.

This is needed, at a minimum, to develop simple applications to run against Windows Embedded CE 6.0 on Psion Teklogix devices (e.g. Hello World type application). You would need to use our Mobile Device's SDK to access Psion Teklogix specific equipment/functionality (e.g. scanners).

Unzip the file (PlatformCE600.zip), then install PlatformCE600.msi.
