### Fixes in this Release

- Fix enrollment issue with .US domain name extension.
- Digital Certificate authentication enhancement.
- Improve performance in the display of the authentication window during the logon process.
- Update the copyright information.

### What's New In This Release

- Integrate Authentec AT9 driver with OEM customizations.
- Added Intel RFID and Barcode support for 64-bit platforms.

### Known Issues and Limitations

If the current OmniPass version is 6.x.x, this package will install as a trial version upgrade that will require an additional upgrade activation fee.

### Installation and Configuration Instructions

To install this version update, perform the following steps:

1. Download this update to the directory location of your choice.
2. Unzip the file to a location on your local drive.
3. Back up your existing OmniPass profile (see OmniPass Help for details).
4. Run version 7.50.12 setup.exe and follow the prompts.

### Licensing

Refer to your applicable end-user licensing agreement for usage terms.
