## Introduction

The Psion 9160 G2 is our most advanced Wireless Gateway. The Psion 9160 G2 offers our exclusive Narrowband radio technology addressing larger areas that demand extensive coverage.

Coupled with an 802.11 radio for a range of wireless applications, this long range base station enables you to mix and match RF technologies to best suit your requirements. The Psion 9160 G2 delivers robust security, with the ability to scale from basic WEP all the way up to 802.11i with AES encryption.

## Description

- Updated product branding.
- Avoid terminal lock-up with automatic radio address assignment.
- Automatically set poll ID for cellular slave devices.
- Improve Cellular Protocol message validation.
- Correct "bcm ppr" for terminals with more than 7 sessions.
