Version 4.0

Introduction

- Update only needed if you are running an older release of the software. To check your version, see this section <u>Checking the versions</u>
- All data on the tablet will be erased upon installation.
- Windows 10 Activation takes place only after device connects to Wi-Fi.

Creating Installation USB Stick

Follow these steps to create bootable installation USB stick. This is critical: Only FAT32 format is recognized by the tablet BIOS for the steps below. Note: **Use 8GB stick or larger.**

NOTE: In the past we have encountered few instances where some USB Sticks are not recognized by ET5x properly. We would recommend using SanDisk [8/16/32 GB] in such cases since we never saw any issues with this particular brand.

- 1. Insert USB stick to host PC.
- 2. From Windows Explorer right click USB stick and Format to FAT32, as in the figure below:

Format BOOTME (Q:)
Capacity:
14,8 GB 🔹
File system
FAT32 (Default)
Allocation unit size
16 kilobytes 🔻
Restore device defaults
Volume label
BOOTME
Format options
Quick Format
Create an MS-DOS startup disk
Start Close

3. Rename stick as "BOOTME" by right click in Explorer and rename.

Connecting External USB Devices to Tablet

Connect to a keyboard and mouse since the touch screen functionalities are disabled in BIOS mode. Use either setup:

- Using ET5X Comm cradle
- Using USB Hub

Using ET5X Comm Cradle

Use a Zebra cradle - CRD-ET5X-1SCOM1 or CRD-ET5X-1SCOM1R- that has the USB ports on the back.

- 1. ET51/ET56 tablet
- 2. ET5X cradle with external power cable
- 3. Bootable installation USB stick connected to tablet USB port
- 4. USB keyboard connected to cradle
- 5. USB mouse connected to cradle

Using USB Hub

- 1. ET5x device
- 2. USBC hub with external power source
- 3. USBC charger connected to USBC port
- 4. USBC hub to devices USBC port
- 5. USB keyboard connected to USBC hub
- 6. Bootable installation USB stick connected to USBC hub

Updating OS

- Extract the downloaded ET5X-WIN10-AURA-0XX-Autoinstaller.zip to a folder. Copy the entire contents of this folder to the formatted installation USB stick. NOTE: Make sure image is downloaded completely. Check the size of the downloaded image versus image posted on the support central. Partial downloads may corrupt the device.
- 2. Attach installation USB stick to tablet USB port/USB hub.DO NOT CONNECT TO USB PORT ON BACK OF CRADLE.
- 3. Startup the device by turning power source on and pressing power button on device.
- 4. When BIOS logo is seen, press ESC button from keyboard.
- 5. Device boots to BIOS.

6. Select "Boot Manager" with keyboard and press ENTER.

7. When USB stick is attached two items are listed:

Select "**EFI USB Device**" using the "down arrow" from the keyboard and press ENTER. If Boot Manager dose not display EFI USB Device (USB stick) confirm that the USB is formatted as FAT32 and bootmgr.efi file is visible in the USB stick. Re-seat the USB in the USB port and try again. If the problem, persist see the "<u>Create a Bootable USB</u>" section at the end of this document.

10. Device reboots, and the following screen comes up with Cortana voice and executes the Windows preliminary setup and user is prompted to create a profile .Audio can be disabled by clicking on the bottom right corner audio icon.

11. User is Prompted to connect to a WiFi

12. If you connect to a WLAN you will be prompted to choose to join an Azure or Local Active Domain. If not sure you can choose **Local Active Domain** and Click on "Next".

13. Once user profile is created device boots to Windows 10 screen. User gets prompted to use Cortana and the Windows 10 Desktop appears followed by recommended settings by Microsoft. See below

When WLAN is not connected

With WLAN connection

Update USB-C Controller Firmware

To check if USB-C controller firmware needs to be updated, please: 1. Start windows and attach Auto Installer USB stick to a tablet and open command prompt as an administrator.

2. Go to Tools\UsbcUtility**X.X.X.X**\ in USB stick.

3. Connect a USB-C charger.

4. Run 'UsbcUtility.exe -v' to read current firmware version. If you need to update, please continue to step 5.

5. Run 'UsbcUtility.exe -f <file>', where <file> is a full path to a low region firmware file to update with. Be sure to use a low region file only! For Eg : <file> can be found in Tools\UsbcUtility\0.6.0.0\aura_usb_c_controller_low_region_0006.bin in usb stick.

To print full help, please run 'UsbcUtility.exe' without options or arguments. If you prefer, the options can be given also with a prefix '/'. For example, '/f' would be equal to '-f'.

Checking the versions

The following versions should match the versions reported in the target version release note. Boot to BIOS Menu: If using USB keyboard, press ESC. If not, press volume Up + volume Down before boot, then press power button while still holding the volume buttons down.

Check EC FW Version

-Boot to BIOS Menu -> select Setup Utility -Check "EC FW": e.g. 1_8 – Please always compare the versions with release notes. Following screen shot is for referrence purpose only.

Check BIOS Version

-Boot to BIOS Menu -> select Setup Utility

-Check "BIOS Version": e.g. W-0136 – Please always compare the versions with release notes.

Check WIN 10 Release Version

- 1. Right click on Start. Click Run Type "regedit"
 - 2. Navigate to **HKEY_LOCAL_MACHINE->SOFTWARE-> ReleaseInfo** Please always compare the versions with release notes.

Note that the Win OS version can also be checked the following way:

From an Admin command prompt type "reg query HKLM\Software\ReleaseInfo"

Creating a bootable USB

- 1. Insert a USB flash drive into a running computer.
- 2. Open a Command Prompt window as an administrator.
- 3. Type diskpart.
- 4. In the new command line window that opens, to determine the USB flash drive number or drive letter, at the command prompt, type list disk, and then click ENTER.

The list disk command displays all the disks on the computer. Note the drive number or drive letter of the USB flash drive.

- 5. At the command prompt, type select disk <X>, where X is the drive number or drive letter of the USB flash drive, and then click ENTER.
- 6. Type clean, and the click ENTER. This command deletes all data from the USB flash drive.
- 7. To create a new primary partition on the USB flash drive, type create part pri, and then click ENTER.
- 8. To select the partition that you just created, type select part 1, and then click ENTER.
- 9. To format the partition, type format fs=Fat32 quick, and then click ENTER.
- 10. Type active, and then click ENTER.
- 11. Type exit, and then click ENTER.
- 12. When you finish downloading the image, save it to the root of the USB flash. [See next page for command prompt output]
