Introduction

The SB1 is a brand new category of mobile device which employers can give to every retail associate. This truly smart badge is full of the features every associate needs to deliver the best customer experience, with the connectivity needed to keep them productive, every minute of every day. The badges each associate wears can allow associates to: access task lists; accept tasks and acknowledge completion; scan a bar code to check price and inventory; and connect via push-to-talk (PTT) with other workers carrying practically any other PTT-enabled mobile device in use in the store. The result is a powerful always-connected workforce that can always access the people and information they need to maximize productivity and exceed customers' expectations on every visit.

Description

v02.01.39

Features/Enhancements

- Allow Client Applications to use QWERTY Keyboard and includes other Keyboard fixes.
- Application can be configured for Auto-Launch and Auto-Logout on cradle removal and insertion respectively.
- Added User Notification screen to warn user of accidental suspend.

Fixes

- Improved overall Push-To-Talk user experience.
- Various improvements on optimized memory usage for thin-client applications.
- Improved Wait/Quit feature to recover the Application automatically due to network issues.
- Device Auto reset time set to 12 Hours.

Note:

- Make sure that you remove all shell configurations setting from your SB1 "userdrive" before updating your SB1 device to new OS version.
- Applications developed using the Software Development Toolkit v0.7 will not be compatible with OS v02.01.39. Software Development Toolkit v1.6 should be used with OS v02.01.39.

Contents

1. TSDxc60AenAB21397.APF – A package file for deployment using AirBeam.
2. TSDxc60AenSF21397.ZIP – Additional support package files for deployment using AirBeam.

Device Compatibility

This software release has been approved for use with the following Symbol devices.

Device	Operating System
SB1	Windows CE 6.0

Installation Requirements
