About PowerPrecision Console

PowerPrecision Console (PPC) is a battery management solution that gives organizations using Zebra mobile computing devices a centralized view of the health, state of charge and performance statistics of device batteries in their organization. Starting with PPC v2.0, it is part of Zebra DNA Visibility Console (ZDVC), which consists of a suite of solutions including Device Tracker On-Prem. Using data gathered and stored in Zebra's PowerPrecision batteries, PPC provides administrators with insight that can help determine when battery health could affect productivity and when a device battery should be removed from service. The PPC centralized management system continuously monitors battery health data in real time and can trigger customized notifications to alert device users of actions needed for battery swapping or decommissioning, helping to ensure optimized deployment of healthy batteries at all times.
