

# WFC Extension Manager Version 3.0.23106

## Release Notes – July 2023

### Highlights

Release v3.0.23106 of the WFC Extension Manager is now available to customer access. This release contains the following features.

- Simplified voice licensing
- Subscriptions column in Extensions tab
- Improved identification of devices using premium licenses
- Maintenance updates

### New in WFC Extension Manager v3.0.23106

#### Simplified Voice Licensing

Customers will now see only Premium and Standard licenses in their Licenses Summary tab, corresponding more exactly with what the customer purchased.

 Important: Note that as part of license simplification, premium licenses can only be used for premium PBXs. Standard PBXs require standard licenses. Customer with premium licenses should ensure that their devices are all configured to use premium PBXs.

See the WFC Voice Licensing Guide and the Extension Manager Customer Admin guide for more information.

#### Improved Identification of Devices using Premium Licenses

To identify all devices using premium licenses, customers previously needed to add up devices with “In Use” licenses as well as “Not In Use(\*)” on the Licenses Assigned tab. An extra column has now been added to that tab which identifies all devices using premium licenses using the filter “Assigned”.

#### Subscriptions Column in Extensions Tab

A subscription column has been added to the Extensions Tab. This column will identify the subscriptions currently active for the user/device using the extension.

### Resolved Issues

- Fixed an issue where WFC Voice would not get assigned extension automatically after device BSP has been updated. [v3.0.22311]

### Usage Notes

- WFC Voice Client licensing will occur automatically with this version of the extension manager; programming of the AID into the device is not necessary. Automated licensing requires WFC Voice Client version 9.0.20306 or later.

- **Important:** Note that premium licenses can only be used for premium PBXs. Standard PBXs require standard licenses. Customer with premium licenses should ensure that their devices are all configured to use premium PBXs.
- The customer can view the total and used license counts in the Extension Manager portal, in the Licensing/Licenses tab. The customer can view the licensed devices in the Extension Manager portal, in the Licensing/Assigned tab.
- The customer can release licenses from specific devices by obsoleting them in the Extension Manager portal, in the Portal/Devices tab.

## Known Issues

- None

## Documentation

- The Workforce Connect Extension Manager Customer Admin Guide and API Reference Guide is on the WFC Voice support page at <https://www.zebra.com/us/en/support-downloads/software/productivity-apps/voice-client.html>.

## About WFC Extension Manager

The Zebra Workforce Connect (WFC) Extension Manager provides the ability to dynamically assign voice extensions to employees using Zebra WFC Voice clients. You can automatically assign departments and extensions or allow users to select a department or extension from an on-screen list. You can enable dynamic extension management by providing the Zebra WFC Extension Manager with a list of stores, departments and their associated extensions and then configure the voice clients to connect to the Zebra WFC Extension Manager.

## WFC Extension Manager Release History

### Release v3.0.22311 offers:

- Export function for devices and their licenses
- Ability to limit scope of contacts import

### Release v2.12.22211 offers:

- Improved license display
- Configurable features improving operation of the voice client
- Maintenance updates

### Release v2.10.109 offers:

- Maintenance Updates

### Release v2.8.103 offers:
