Installation Instructions

From Windows with DFU

**NOTE:** Aava_bios_inari_028 or newer is needed for the update from Windows.

1. Right click ULPMCDFU.inf
2. Select Install
3. When Windows prompts for restart select “yes”
4. After install & restart you can check if install was successful from device manager:
   - Firmware->ULPMC Firmware yellow bang indicates problem.
   - And Firmware->ULPMC Firmware ->Properties->Details->“Hardware Ids” last parameter beginning with REV tells you current version number(for example REV_281A for Aava_ULPMC_28_Aava_1A)
Inject driver to Windows Image file

1. Mount "os.wim" to a folder
   a. `md c:\mount`
   b. `dism /mount-wim /wimfile:d:\os.wim /index:1 /mountdir:c:\mount`

2. Add ULPMC driver
   a. `dism /image:c:\mount /add-driver /driver:"d:\ULPMC driver 1B\ULPMCDFU.inf"

3. Unmount image
   a. `dism /unmount-wim /mountdir:c:\mount /commit`

On the next boot after flashing the image on device ULPMC will be updated.
