### About DEX Scan & Pair

DEX Scan & Pair Utility allows pairing DX30 Bluetooth accessory with the Compatible Android Handheld computers by scanning MAC address of DX30 from Android Device. This software mainly targets the enablement of Direct Store Delivery (DSD) Direct Exchange (DEX) protocol applications. This software applies to legacy applications that have traditionally used serial communications over a DEX cable and it enables them to

communicate over Bluetooth via a Bluetooth accessory (DX30). The application allows user pairing DX30 accessory over Bluetooth by Scan and Pair method with handheld computer. Post pairing with DX30 accessory an application must setup a SPP connection to communicate using DX30 over Bluetooth.
