## Upgrade to the MC9200.

**TAKE WORKFORCE PRODUCTIVITY TO THE NEXT LEVEL WITH THE BEST OF TODAY'S ADVANCED MOBILE TECHNOLOGIES.**

With over 2.5 million sold, you get a proven and solid product platform that offers the same great rugged design you count on for dependable operation, now with the very latest technologies you need to take workforce productivity to the next level:

- More processing power
- More memory
- More operating systems
- Swappable operating systems
- True enterprise-class Android
- Faster wireless speeds for better application performance
- The very latest in advanced scanning technology to improve workforce productivity
- A new unparalleled extended range 1D/2D imager that can capture barcodes up to 70 ft./21.4 m away
- More data storage
- Superior audio functionality
- Backwards accessory compatibility for lower-cost upgrade
- Mobility DNA solutions that simplify mobility and boost device value
- Superior Zebra OneCare support plans that cover everything
- Remote visibility into the health of all of your devices\*

# Upgrade to the MC9200

## A TRUE FUTURE PROOF PLATFORM WITH ALL THE LATEST TECHNOLOGY

You're using one of the world's leading rugged MC9000 Series mobile computers to streamline and improve the accuracy of inventory and asset management activities. Now, you can take workforce productivity to the next level with the next generation MC9200. You get more power for blazing application performance, the very latest in advanced scanning technology, support for 802.11n for faster wireless connectivity, the latest mobile operating systems — including support for Android and its elegant and intuitive graphical applications and much more. Backwards compatibility with the accessories you already own allows you to upgrade very cost-effectively. And if your devices are no longer covered by a service contract, your new MC9200 devices are eligible for Zebra *OneCare*, which offers comprehensive coverage for every issue, remote diagnostics that enable the resolution of device issues without a trip to the service depot, and Operational Visibility Service, which provides visibility into the health of your device, enabling the proactive maintenance that maximizes device uptime and keeps your devices in the hands of your users. Following are the many powerful new features that will help you improve workforce productivity and reduce cycle times to better serve your customers — and improve your competitive advantage.

### MC9200 ADVANTAGES

|  |   |
|--|---|
| <b>The flexibility to pick your OS</b>   | With the MC9200, you have the freedom of choice — choose from the top three mobile operating systems to best meet the needs of your business: Android 4.4.4 with Mobility Extensions (Mx), Microsoft Windows Embedded Compact 7.0 or Microsoft Windows Embedded Handheld 6.5.3.   |
| <b>The flexibility to change your OS</b>   | It can be hard to determine today what operating system you may want to migrate to in the future. That's why the Premium MC9200 enables you to swap to any supported OS when you want.*   |
| <b>Robust enterprise-class Android</b>   | If you're looking to migrate to Android, Zebra's Mobility Extensions (Mx) make Android a more robust enterprise-class operating system. Mx minimizes IT support time and maximizes worker productivity and device uptime by providing better control of your mobile devices, application access and Wi-Fi performance and security.   |
| <b>The very latest in advanced mobile technologies</b>   | While some may argue that the MC9200 is an old-style device that has had its day, nothing could be farther from the truth. The MC9000 Series is like a fine wine that just gets better with age. The latest model, the MC9200, lives up to that adage, offering the most robust processing power, memory, rugged specifications and advanced scanning options in its class everything you need to take workforce productivity to the next level. It is also the only device to offer a future-proof swappable OS strategy, Android fortified for the enterprise, government grade FIPS 140-2 Level 1 certification for the most sensitive data, as well as the most keypad options and the most scanning options, providing superior customization to meet your specific business requirements.   |
| <b>The most scanning options — including a new extended range scanner with a revolutionary range</b> | When it comes to choosing a scan engine, the MC9200 stands alone in its class with the most options. Why is that important? In order to obtain maximum scanning speed and efficiency, you need an engine that is optimized for the types of barcodes in use in your operations. The 1D/2D SE4850 offers an industry leading range, able to scan barcodes from 3 in. to 70 ft./7.6 cm to 21.4 m — 60 percent closer and 35 percent farther than the competition. And with an industry leading field of view, a 4 in./10.16 cm barcode can be scanned as close as 7 in./17.78 cm — about a third of the distance of competitive scanners. The SE4750 is ideal for 1D/2D standard to mid-range scanning. And a wide variety of additional options are available for enterprises that utilize only 1D barcodes or specialty barcodes such as direct part marks. |
| <b>Highly cost-effective upgrade to the latest technology</b>  | One of the main reasons we've kept the form factor of the MC9200 the same instead of migrating to a slimmer lighter device is that enables us to create a very cost-effective upgrade path to the latest mobile computing technology. Backwards compatibility with your existing accessories allows you to upgrade with the least cost — you only need to purchase the devices, no new accessories are required. And if you have your heart set on a smaller and lighter device, we have many new rugged options to choose from.  |
| <b>Mobility DNA</b>  | Our Mobility DNA ingredients put our mobile computers in a class of their own when it comes to simplifying your mobility platform. The MC9200 supports key DNA ingredients, from its PowerPrecision battery that offers better battery cycle times and battery metrics for better battery management, All-Touch TE that transforms your "green screen" apps into elegant HTML5 touch apps without writing one line of code; TekSpeech Pro for robust voice-directed apps, Workforce Connect PTT Express for to instantly connect your workers with PTT, right out the box — and more.   |
| <b>Superior audio capabilities</b>   | We doubled the speaker output, delivering the superior audio quality needed to support voice-picking or other voice-directed applications. And you can even enable PTT services over your WLAN right out of the box with our included complementary Workforce Connect PTT Express client.   |
| <b>A-to-Z mobility solutions provider</b>  | Since Zebra is a complete mobility solutions provider, you can get everything you need under one roof, simplifying purchasing, ensuring compatibility with all mobility infrastructure and providing the expert support that only the manufacturer can provide.   |
| <b>Support commitment you can count on</b>   | Not only do you get a device designed to last for three to five years, but you also get support you can count on. We provide support for a full five years after a model has been retired, providing the peace of mind you need that support will be available for the complete lifecycle of your MC9200.   |

\* Requires the purchase of a Zebra OneCare support plan with the optional Operational Visibility Service (OVS).
