* Read ranges are theoretical values that are calculated for non-reflective environment. Different surface materials may have an effect on performance.

* Environmental values are the best recommendations; resistance against different conditions depends on the combination of all influencing factors, exposure duration and chemical concentrations. Thus, product’s final suitability for certain environmental conditions is recommended to be tested.
**INSTALLATION INSTRUCTIONS**

When attaching the label ensure the following:

- Select a smooth surface without uneven areas below tag.
- Avoid touching the background adhesive and IC location.

When mounting the label with its adhesive, clean and dry the surface for obtaining the maximum bond strength. Typical cleaning solvents are heptane or acetone for oily surfaces or isopropyl alcohol for plastics. Do not use household cleaning solvents that contain oils. Carefully read and follow the manufacturer’s precautions and directions for use when working with solvents.

Ideal application temperature is from +21°C to +38°C (+70°F to +100°F). Bond strength can be improved with firm application pressure and moderate heating up to +54°C (+130°F). Application at temperatures below 10°C (50°F) is not recommended.

Optimal read range is achieved when label is attached close to the edge of metal asset, like shown in below picture.

Smallest recommended bending diameter of the Confidex Silverline Blade™ is 100mm. For optimal performance please bend the label in the orientation shown below.
