

Scanner Management Service (SMS)

WE SIMPLIFY REMOTE MANAGEMENT TO THREE EASY STEPS

If simplicity is your aim, Zebra's Scanner Management Service (SMS) is your solution for remotely managing Zebra scanners. With this free utility, you can effortlessly configure parameters, update firmware and access asset information. In a few easy steps, you can program your scanners remotely and walk away. SMS takes care of the rest. Think of the time, effort and money you'll save. Welcome to the set-and-forget solution that dramatically reduces total cost of ownership.

Simplified to Three Easy Steps

What used to require a Herculean effort is now remarkably simple and can be done in just three steps.

1. **Generate** an SMS package using our 123Scan utility – the user-friendly configuration wizard that practically does the work for you.
2. **Deploy** the package using your network tools.
3. **Load.** Upon receipt of the package, the SMS agent will load it onto the scanner and take care of the rest. Yes, it's that easy.

Configure at the Point of Use

Imagine if configuring scanners didn't need pre-staging at a depot, on-site operator intervention or scanning of a barcode to establish communication. We did, and the result is SMS. With SMS, you automatically establish communication between the scanner and your host application. No console is required to execute operations. Just plug it in and walk away. The SMS package handles the programming details, so you don't have to.

Why struggle with the creation of a remote management package when 123Scan's wizard makes it so easy. Everything you need is there, from a deployment checklist to easy-to-understand how-to videos. This highly intuitive wizard will walk you through naming your package, selecting your device, and deciding which configuration settings and version of firmware you prefer. The output of

the wizard is a SMS package and its settings are automatically documented for you. Now, just load your SMS package to your scanner's host using your existing third-party network management tools. From there, the SMS agent will load the package's content onto your scanner. It's that easy.

Reduce Scanner SKUs

Instead of buying multiple scanner SKUs, you can buy one and configure it multiple ways. With SMS, you can create packages specifically for your front register, your receiving dock and your pharmacy. Just load the right package to the right scanner host, and the SMS will take care of the rest.

Eliminate Licensing Fees

SMS is available at no cost. Since the SMS works with all Zebra scanners and their standard firmware, you won't need to spend money on special licensing fees.

Go Beyond the Barcode

It takes more than hardware to resolve today's toughest scanning challenges. It requires intelligent software to address the needs of every stakeholder. That's why our data capture devices contain DataCapture DNA, the genetic code that simplifies the entire Zebra scanning experience. As one of the many tools of DataCapture DNA, the Scanner Management Service makes it possible to deploy and maintain enterprise-wide fleets with the greatest of ease.
