

Do More with Imaging

ZEBRA'S POWERFUL IMAGING SCANNER SOLUTIONS FOR MANUFACTURING AND WAREHOUSING.

Get More Technology

ZEBRA'S RUGGED IMAGERS PROVIDE ACCURATE INFORMATION TO INCREASE PRODUCTIVITY IN INDUSTRIAL ENVIRONMENTS.

Real-time access to your business data – from every inch of your warehouse or manufacturing space – is vital for success. Productivity depends on your workers having the information they need to streamline manufacturing processes or to pick, put-away and replenish stock more effectively. Zebra Imagers give you visibility throughout your operations that can help enable flawless fulfillment. These imagers capture real-time information so you know exactly what goods and materials you have and where they are located, allowing you to effectively manage changes in customer demand.

Keep Your Workforce Productive and Your Processes Streamlined

Read any barcode in any condition

Increase productivity with one device that can read all industry-standard barcodes – 1D and 2D. Zebra Imagers can handle whatever comes their way, including reading damaged barcodes or scanning in very light or dark environments. Even when covered in grease or dust, they still work well and deliver the same reliable results.

Read multiple barcodes

Quick and easy capture of important product information is embedded in multiple barcodes with a single trigger pull. Save time and increase productivity with Zebra's multi-code technology

Omnidirectional scanning

Faster scanning is simple when there's no need to align the device or barcode.

Enhanced range

Barcodes can be scanned across a wide range of distances, as far as 30 feet away, so worker productivity and production line efficiency are not disrupted by having to move closer to items.

Rugged Form Factor

Industrial environments need rugged imagers built to withstand heavy use and harsh conditions. Our rugged devices combine industry-leading data capture technology with an exterior virtually impervious to damage.

ENABLE FASTER AND MORE EFFICIENT PROCESSES.

PICK AND PACK

As labels often have different barcode types, a scanner that can capture both 1D and 2D simplifies picking, packing and shipping orders.

- Zebra Imagers read all barcode types so workers can respond quickly to changes in production demands and issues, reducing errors and bottlenecks.

TRACK AND TRACE

2D barcodes identify components throughout the manufacturing process.

- Easy to track component details, including serial number, date of manufacture, lot number, manufacture location, etc.
- Quarantine bad lots – and identify shortages, discrepancies or damage before they affect warehouse processes or production.

WORK IN PROCESS

Barcodes enable tracking of all materials and partly-finished products throughout the production process.

- Tracking ensures the right parts are in the right place at the right time, improving productivity and streamlining operations
- Optimizes the flow of goods and materials and identifies any productivity issues.

SHIPPING AND RECEIVING

Shipping labels often include multiple barcodes – such as a mix of 1D and 2D codes.

- Zebra Imagers provide simultaneous scanning, which enables shipments to be identified and verified in real time.

Unbeatable performance

Zebra's market-leading Imagers provide the performance needed to support the industrial applications that help you connect to real-time information.

Why Choose Zebra Imaging Technology?

Some of the largest manufacturers and warehouse operators in the world rely on the proven, superior quality of Zebra Imagers.

Built for the most demanding industrial environments – engineered with breakthrough digital imaging technology, our future-proof portfolio of rugged and reliable Imagers, varying in size and portability, delivers extremely fast and accurate data capture.

Great Zebra Imagers for manufacturing and warehouse management

DS3600 Series – Ultra-rugged scanners that redefine the cordless experience with new standards of durability, performance and manageability. There is a model for each data capture application.

Everyday technology that's simple to deploy – Zebra's **123Scan utility** makes configuring your imager quick and easy. **SMS**, our Scanner Management Service, lets you manage your imager fleet from a central location. And our **Software Development Kit** gives you the flexibility to truly customize your solution for specific tasks and systems.

We are the market leader – pioneers in barcode research for over 35 years, we have over 2000 years of collective experience among our research and development team. Our long history of firsts includes the very first rugged barcode scanner.
