ZEBRA

ZEBRA SMARTPACK™
Trailer

Know What's Going On Inside Your Trailer

## And Around Your Dock

Reimagine your loading operations with SmartPack™ Trailer.

Optimize space to ship less air and reduce operating costs.

Process more packages faster with greater efficiency.

Reduce damage and loss.

Speed up seasonal worker training and performance.

Take the best route for optimizing your operations with SmartPack Trailer.

- **Capture live images** on a centralized dashboard view.

- **Utilize 3D sensing technology** to enhance load efficiency and quality.

- **Deliver real-time visibility** into your loading operations.

- **Supervise multiple loading docks** simultaneously.

- **Receive in-depth insights and data** to improve processes and safety.

The Intelligent New Loading Environment

Sense

what's happening across your loading operations.

Enable deeper enterprise visibility into people, processes, packages and productivity.

Enterprise-grade sensing technology + scanning and mobile technology.

Analyze

real-time and historical data instantly.

Empower your workforce by delivering actionable insights.

Drive smarter business decisions.

Act

on data to improve loading efficiencies and performance.

Help workers make the right next move, at the right time.

Experience a greater vantage point for a greater advantage.

Here's how logistics organizations benefit from SmartPack™ Trailer...

The cost Savers

Watch performance go up as operational costs go down

- **Measure volumetric efficiency**
  for better space utilization and fullness tracking.

- **Manage multiple loads**
  via fixed or mobile dashboards.

- **Collect and analyze real-time data and historical trends**
  from one or multiple loading docks.

The time Savers

Load trailers more quickly and accurately

- **Monitor load rates and quality status**
  in all trailers via visual indicators.

- **Customize alert triggers**
  for load quality, idle time and door open/close status.

- **Access real-time views**
  into fullness, wall-by-wall profile and load density.

The right Tools

Improve quality, training and safety

- **Monitor load construction**
  to ensure balance and proper stacking.

- **Maximize historical data and images**
  to develop or improve safety and training.

- **Utilize the centralized dashboard**
  to monitor the loading process and provide real-time feedback to workers when needed.
