

TE Migration

WITH ALL-TOUCH TE (ATTE)

Your legacy “green screen” terminal emulation (TE) apps have served your business for years. Now, workers expect business apps to provide the same experiences that consumer apps offer. TE Migration moves terminal emulation apps to Android devices, quickly and inexpensively.

Challenge

Stalled Productivity

Worker efficiency is stagnant, a better solution is needed to realize new productivity highs

Inefficient Processes

The app was designed and built by a developer, not specialists focused on workflow productivity

Extensive Training

New workers need training on unfamiliar interfaces and complicated key entry processes

Expensive Re-writes

Building a new app for modern devices is costly, time consuming, and a complex process

Solution

These challenges are solved with Zebra's TE Migration service which enables existing Terminal applications to run on Android. This migrates your portfolio of apps to modern systems in a fraction of the time of a re-write, while also providing the opportunity to re-imagine your app to optimize processes, and create intuitive experiences that boost productivity.

Leverage Touch

Modernize your applications to take advantage of intuitive touch-enabled colorful screens

Accelerate Efforts

Move your existing terminal apps to run on Android in just weeks, and innovate over time

App Productivity

Add to device productivity gains with intuitive app experiences built specifically for the TC8000

Cost Effective

Optimize processes while avoiding the costs, risks and effort associated with app re-writes
