Wireless LAN Security Management

NETWORK INFRASTRUCTURE MANAGEMENT

It could be a determined hacker, trying to steal your customer credit card data. Or it might be a well-meaning employee, just trying to get the job done, who "works around" your carefully designed policies. It could even be a piece of equipment that was considered secure yesterday, but could be exploited today through a recently uncovered vulnerability.

If your wireless network is breached, your entire information system could be exposed. Your sensitive data, your reputation and your future are all at risk... unless someone is watching around the clock. You can rest easy knowing the necessary vigilance is in place. Just let Zebra® manage it.

Reduce security risks

Mobility is an invaluable strategic tool that has become essential to today’s way of doing business. However, the more mobile you and your business become, the greater the risk that your proprietary and sensitive data could travel somewhere you don’t want it to go.

Securing a wireless network is a unique technical challenge that requires special expertise and resources. Failure to meet the challenge can be very costly, indeed — just ask any company that has faced the regulatory, financial and public relations consequences of a serious security breach.

Let the experts handle it

Zebra's Wireless LAN Security Management services are designed to help you identify and close the gaps that could compromise your information systems. From our dedicated Security Operations Center (SOC), we watch over your wireless network 24x7x365. We stay ahead of emerging threats by deploying, managing and maintaining powerful, sophisticated wireless security tools. If a problem can be handled remotely, we handle it. If it requires action from your end, we help you act, quickly and effectively. With Zebra proactively tending to your wireless security, you can maintain both your mobility and your confidence.

Wireless LAN security management

For organizations concerned with meeting compliance requirements, such as Payment Card Industry (PCI) Data Security Standards (DSS), HIPAA, and other compliance mandates

- Industry-leading intrusion prevention, rogue detection and threat mitigation
- Comprehensive wireless regulatory compliance monitoring and reporting, such as required by the Payment Card Industry (PCI) Data Security Standard (DSS), HIPAA, and other compliance mandates
- 24x7x365 policy monitoring and software security maintenance
- Proactive vulnerability management and wireless security consulting
We help you ensure that your security policies are fully compliant, then support you by proactively identifying rogue device threats initiated on your network.

We provide around-the-clock monitoring, alerting you to actionable events so that your team can respond quickly and appropriately. Our sophisticated analysis tools are exceptionally accurate, so your attention is needed only for critical, actionable events. You meet your essential compliance requirements, while minimizing the burden on your own IT resources.

Zebra’s Wireless LAN Security Management service takes your protection to the next level, adding expert support to respond to a full range of potential data security threats. Monitoring 24x7x365 enables us to alert your response team not only to rogue devices, but also to security policy violations, attacks or suspected compromises. We help you investigate and resolve security issues, keep your device and infrastructure inventory updated, and provide regular technical reports. We stay on top of security, you stay in control of your network and your data stays safe.

Network infrastructure management services

Wireless LAN Security Management services are a part of our full portfolio of Managed Services, solutions designed to let you choose the right combination of expert management, monitoring, security and optimization for your wireless network and devices. For customers with special outsourcing needs, we also provide customized services to help ensure maximum security for your WLAN. Ask your Zebra representative about how we can help your business meet its performance objectives.
