

# You Do All You Can to Reduce Risk

Let smart technology add another level of protection

Substandard scheduling solutions can leave your hospital vulnerable to serious consequences.

### Too Little

Schedule too few workers and you could find yourself unable to tend to fluctuating patient and acuity loads.

### Too Much

Schedule too much overtime and you risk incurring more medical errors.

### Too Exposed

Schedule the wrong staff without the right credentials, and you could face litigation or exclusion from federal programs.

## Strike a Balance Between Savings and Standards

Zebra Reflexis' staff scheduling accomplishes what spreadsheets and ineffective software cannot. It automatically generates schedules that walk that fine line between budgets and compliance, protecting your patients and your organization's reputation and financial well-being.

### Simplify the Complexity of Compliance

Let highly, configurable labor models and scheduling rules satisfy changing labor laws, union rules and hospital policies.

### Mitigate Penalties, Litigation and Fines

Address concerns before they become crises; automatically receive alerts of potential violations.

### Ensure Shifts Match Accreditation

Instantly verify that each department's shifts have the correct number of staff with the proper credentials.

### Adjust in the Moment

Proactively anticipate census and acuity needs and automatically flex schedules based on workloads, traffic, employee preferences and more.

**Gain the certainty you can handle the unexpected.**
