POSITIVE PATIENT IDENTIFICATION

Zebra's Z-Band wristband solutions cover a wide range of requirements from patient comfort and reducing medical errors to improving workflow and streamlining admission processes. Failure to correctly identify patients is one of the most serious risks to patient safety. With barcode wristbands in place, hospital staff can accurately identify patients and ensure they are given the correct care.

SAMPLE LABELLING

Accurate sample labelling is the best defense against misidentification errors and their significant consequences. Labelling samples at the bedside is a proven method to reduce errors.

LABORATORY LABELLING

Barcode labelling of specimens not only delivers accuracy and reduce risk at the point of care, it also saves time, enabling lab staff to concentrate on clinical rather than clerical activities.

PHARMACY LABELLING

Zebra's supplies help increase pharmacy safety by adding variable data to every prescribed drug at the unit-dose level. Dispensing labels should be no smaller than 35mm X 70mm and must include the details specified within the labelling regulations under the Medicines Act[1]. This ensures the correct medication in the correct dosage is administered to the correct patient.
